TANDY SHATTERS IBM'S PS/2 MONOPOLY

• Micro Channel • 386 • 486 — plus DeskJet and Multi-sync monitor comparison

WE ARE THE TOP GUN IN MONITORS, DISK DRIVES AND PRINTERS. AND THAT MAKES US A MUST.

When you consider that the Samsung Corporation is one of the world's leaders in the field of aviation, involved in the electronics and communications for civil and military aircraft, then the quality of their computers speak for themselves.

George Brown-Amust through its network of dealers, distributes a complete range of computer hardware, supported by the worldwide service and parts back-up of Samsung. Fully warranted Samsung monitors and computers are made to the highest standards of technical sophistication.

Samsung monochrome monitors have become the benchmark in Australian

computing, with their revolutionary flat, anti-glare screens. Just released is a range of compatible colour monitors including the new SC452C.

The Amust DT130 dot matrix printer, manufactured by one of Japan's largest printer manufacturers is today, a 135 cps, near letter quality printer with unsurpassed print resolution and full IBM graphics compatibility.

Chinon disk drives are manufactured by one of Japan's largest manufacturers of disk

drives and are regarded as having just about the quietest 360K and 1.2 megabyte floppy drives available.

For more information regarding Samsung's range of computer products, contact:

REGULARS

5 NEWSPRINT

What Guy Kewney saw at Hanover, including the Atari ST laptop, plus news of PS/2 clones from Dell and Tandy — and the big surprise of the month: an erasable compact disc from Tandy.

138 AFTER DARK

Take off with Stephen Applebaum on an Apollo mission, then settle back for some mischievous mutation.

142 BIBLIOFILE

An updated book review column begins this month with a look at operating systems.

161 COMMUNICATIONS

It's back to basics with a detailed look at how data communications works, plus the usual bulletin board updates.

179 TJ'S WORKSHOP

An extra-big offering of productivity tips for your computer this month.

197 ENDZONE

No user groups listing this month — watch out for a full listing in the July issue; but there are the other regulars: teasers from JJ Clessa, numbers theory from Mike Mudge and Diary Data.

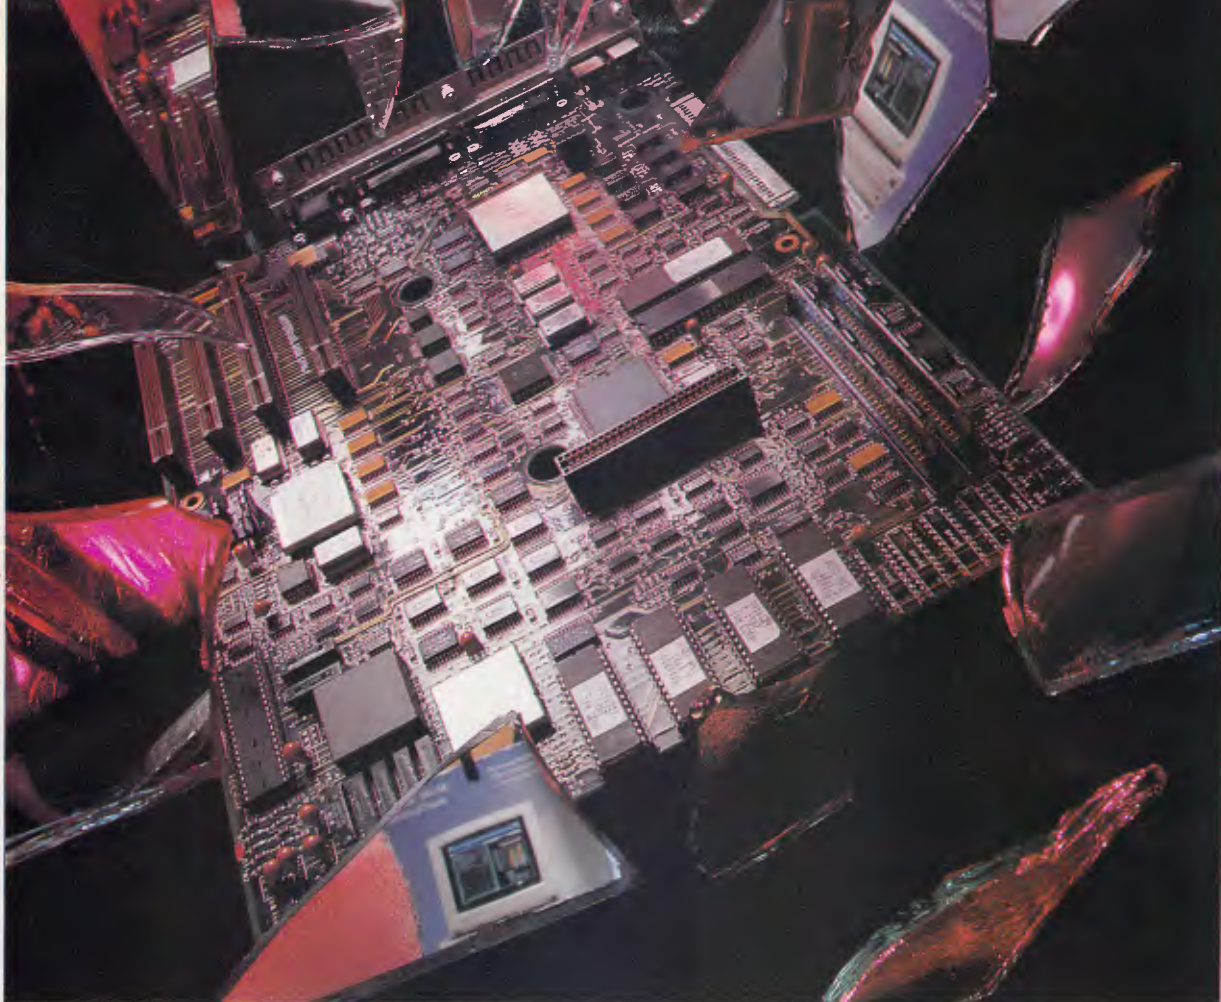

202 ADVERTISERS INDEX

The main players in the microcomputer industry.

FEATURES & REVIEWS

19 MICRO CHANNEL ARCHITECTURE

Pat Moran reveals the secrets inside IBM's Micro Channel Architecture and explains how, as everyone feared, OS/2 will run faster on machines with an MCA.

35 HP DESKJET

If you've lusted after laser-quality output but had a dot-matrix sized budget, Hewlett-Packard's ink-jet printer could be the answer. Derek Cohen examines the impressive text and graphics the machine can produce.

46 SERVING THE SYSTEM

SQL is the common language which, in theory, will allow all database users to share the same information. Kathy Lang explains why such a standard is needed and how it works.

55 REAL-WORLD RISCS

Today's RISC microprocessors are pushing operational speeds beyond the capabilities of current system designs.

60 THE BEST OF BOTH WORLDS

Nick Hampshire peers down his microscope to report on how the latest microcomputer chips combine both analogue and digital processing on the same piece of silicon.

75 ANALYSING YOUR RAM DISK NEEDS

RECORDER works undercover, tapping into your PC's interrupts to keep tabs on all disk accesses and exactly which files are contacted each time. Then, if you ask for it, it's ready with a complete report on your PC's most frequent file encounters. It's up to you to send these files to a RAMdisk and beef up your program organisation.

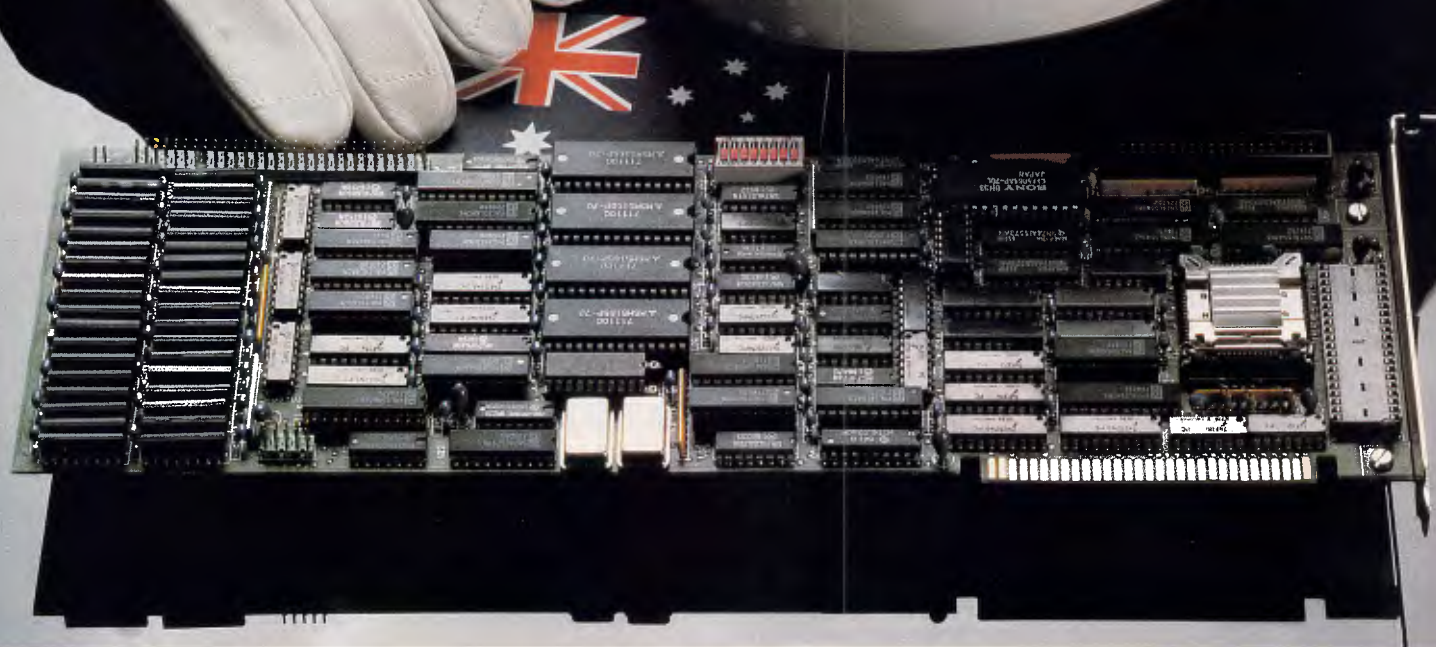

121 MULTI-SYNC MONITORS

NEC started the ball rolling and now there's a plethora of me-too's in the market. What are multi-sync monitors, who needs them and which one's best for you?

147 FIRST-CLASS POSTSCRIPT

It's easy to produce exciting laser-output graphics from just about any microcomputer if you know how to program in PostScript. Julian Dow provides the wiring diagrams, listings and inside information.

GRAND PRIX PERFORMANCE WITHOUT THE GRAND PRICE.

Drop in a Hypertec accelerator board and you'll be amazed at the personality change in your IBM PC, XT or compatible. It simply becomes a turbo-charged speed machine with astounding performance.

And you save \$thou\$and\$ by avoiding upgrades to more expensive AT (or faster) machines.

Hyperace-286 and 286 Plus are our high performance Australian designed, built and supported boards with the emphasis on high quality and reliability. Join thousands of happy users already experiencing the benefits.

NEW RELEASE! For PC users wanting even faster speeds we've added Hyperace-286 Super Plus and Hyperformance to our range.

Hyperace-286 Super Plus is our famous Hyperace-286 Plus accelerator board now running at a lightning 12.5MHz.

Hyperformance is for the real PC aficionado! It has a unique programmable automatic slow-down feature, adjusting its speed when it detects speed sensitive applications and slow peripherals. Total compatibility is assured.

A feature on all our accelerator boards is software speed switching. Simply slow-down to PC speeds where necessary without groping for switches or continuously re-booting.

Number of times faster than an IBM PC each Hypertec board runs for a given task.

	IBM PC	IBM AT 8MHz	HYPERACE 286 PLUS 10MHz	HYPERACE 286 SUPER PLUS 12.5MHz	HYPERFORMANCE	
					12.5MHz	16MHz
Norton SI (V3.0)	1.00	7.70	10.10	12.9	13.30	17.70
PC Bench	1.00	3.78	5.81	7.2	7.30	9.06
Prime Sieve	1.00	2.78	2.96	3.55	5.82	7.76

Regardless of measure used and Hypertec board selected, the speed advantages of our boards over a standard PC are quickly obvious.

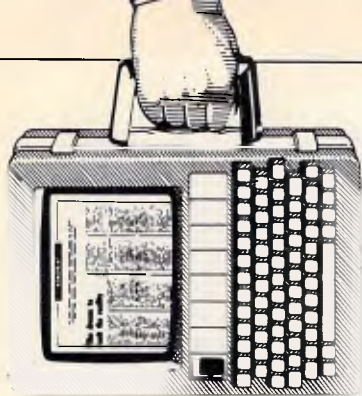

Our boards set the standard for speed and compatibility in the IBM PC architecture. Needless to say, our competitors aren't in the race!

If you're serious about requiring the absolute maximum performance from your PC, drop in a Hypertec accelerator board. Anything else may leave you at the starting line!

HYPERTEC

HYP 108AR

Guy Kewney and our US correspondent, Tim Bjarin, report on the month's micro news, including details of the first PS/2 clone, super-fast processors from General Electric, specifications of Apple's troubled laptop and significant language upgrades from Microsoft.

PS/2 clones from Tandy and Dell

Just over a year after IBM originally unveiled its new generation PS/2 range, featuring the all-singing, all-dancing Micro Channel architecture, the first clones have finally appeared.

Taking line honours was Dell Computers, which unveiled its System 400 (Model 50 clone) and System 500 (Model 80 clone) on April 18, closely followed by Tandy on April 21, with its 5000 MC (Model 80 clone).

More important than the arrival of the machines themselves was the fact that IBM is licensing these companies to go ahead and clone its PS/2s. This way, IBM gets to see the Micro Channel market blossom (resulting in more expansion boards and software); it also pockets substantial royalties with every clone sold; and it makes more money when the less well-heeled companies (such as Ferranti) badge the IBM models as their own. Who said profitability had gone out of the PC market?

Both the Dell and Tandy systems are based on a specialised Intel Micro Channel clone chip set — no systems have so far been released that are based on either the Western Digital or Chips & Technologies clone chip sets.

There has been no indication from InterTan Australia as to the pricing and availability of the Tandy 5000

MC (though it is expected to be released in the US by July), while Dell Computer says it is still making arrangements for an Australian distributor.

Stacey will live on at Atari

A laptop Atari ST should be available by Christmas, at a price of under \$1700 — or so Sam Tramiel assures me.

The machine is currently in the final stages of prototyping at UK company Perihelion, which is best known for another Atari project — the Abaq, based on the Transputer.

Sam Tramiel spilled the beans on 'Stacey', as the laptop is code-named, when we met at the Hanover Fair in March.

There really isn't very much to say about it, from a design point of view: it's an ST design squeezed into a portable box.

The only surprise is likely to be an alternative to the normal Atari mouse — the designers reckon that somebody with a computer on their lap is unlikely to find a level surface to run the mouse around on. "You might be lucky and find somebody wearing a tight skirt sitting next to you on a plane," mused Sam Tramiel, "but otherwise it wouldn't work. So we're probably going to put in a tracker ball."

The main design problems

Tandy's PS/2 clone — it could be here by July

are based on power consumption. The Motorola 68000 chip uses very little power, but all the associated electronics are rather greedy. So Perihelion has taken all the peripheral chips and has designed one large and complex, but miserly, gate array, which replaces them.

Final details of the machine depend on what silicon is available next month when first working prototypes will be shown to the trade.

At this moment, the plan is to have a full megabyte of memory, a hard disk as well as a floppy disk, and a full-screen LCD for display. But memory shortages mean that, quite possibly, the first models will be 512k machines. Also, if memory is expensive, the price will be kept down by

dropping the hard disk. On the other hand, there are some spectacular new liquid crystal displays just coming onto the market at around \$2500 per screen — and if these drop in price, they may be available as a super option.

Interestingly, Atari is now very close to another new machine, also in the 68000 family — its Unix ST.

This is described by Jack Tramiel, owner of Atari, as "the machine which will bring Unix to the consumer — well, to the personal user."

He reckons (quite correctly) that there is a market for Unix machines with people who'd like some of the multi-user accounting software that runs under Unix, but can't afford the normal prices. His machine, based

on the 68030, will be cheap — under \$10,000. And it will include the latest Unisoft version of Unix V.

The bright idea in the package is the decision to use an industry standard bus, called the VME bus. The company's technology boss, R&D vp Shiraz Shivji, points out that there are many similarities between this bus and IBM's new Micro Channel — but that the VME bus has several advantages.

The advantages: there are a very great many VME boards doing a very great many things, already in the market. It is also (said Shiraz) quite a bit faster, and more flexible on timing.

The Atari machine won't be the first VME-bus Unix machine in the world, but it will be one of the cheapest, and it will be well-promoted if Atari does go ahead and sell it.

Few would argue with Tramiel's theory that far. But when he goes on to talk about selling this to personal users as a high-power alternative to things like the PC or the ST or the Amiga or so on, he's talking about testing a concept that has been restricted to saloon bar discussion, until now.

The question is: can an ordinary, untrained user without the support of a programming department learn to use and love Unix?

I've read a lot of learned argument about this, none of which sounded remotely comprehensible. The gist of it is that Unix is much more powerful than DOS, and probably more powerful than OS/2, but that this power comes at a cost.

Most users I know find DOS more complex than they like. I'm not going to stick my neck out very far, but seriously, I do doubt that Unix is going to become a fad.

Guy Kewney

Corporate online databases now on CD-ROM

CD-ROM is proving a more

Perhaps the most surprising element of Tandy's recent PS/2 clone launch was the bonus unveiling of a CD-ROM-like technology that Tandy claims will allow compact discs to be erased and recorded over. The new technology will have major ramifications for the compact disc and CD-ROM field, as products developed with the technology could replace or augment such storage devices as WORM (write once/read many times) drives, tape-backup units and high-capacity hard disks.

When released, the Tandy THOR-CD (Tandy High-Intensity Optical Recorder Compact Disc) audio drive will cost "less than \$700," according to Tandy officials. Promising a late 1989 delivery, they emphasised that THOR-CD is an optical-storage medium that can work transparently with disks and drives that adhere to current CD standards.

"THOR-CD looks just like a regular CD or CD-ROM," a Tandy spokesman said. "It can record, play back, store and erase music, data or video on a disk that can be used on any CD audio or CD-ROM player." The main difference between THOR-CDs and regular CDs, he said, is that the tracks and pits written to by the THOR-CD laser beam can be re-written at least "a million times."

No longer will CD fans have to fork out masses of money for the latest discs — they can simply pop round to a friend's place with their erasable CD and record it. Likewise, they can now pirate more software in one hit than ever before.

cost-effective medium for massive corporate databases than online services. The latest release of CD/Corporate from Lotus, for example, contains data on more than 12,000 publicly-listed US companies, including financial statements, annual reports, investment analyst reports, stock prices and trading data, and abstracts from key business publications.

Lotus picked up the rights to CD/Corporate following its acquisition last year of

Datext, and the product has since been absorbed into the Lotus One Source CD-ROM range. While CD/Corporate costs \$US18,500 for monthly updates, customers still find it a more convenient option than online searching.

Melbourne-based Dis-tronics, currently the world's third largest replicator of compact discs, is preparing a similar corporate CD-ROM with Australian data, according to business development manager Peter Phillips. Dis-tronics (which operates two

CD plants in the US and one in the UK as well as its Melbourne facility) is working with clients on a corporate CD-ROM financial database, that will eventually be available to customers on a subscription basis. While the price has not yet been determined, it is likely to also be "several thousand" dollars per year.

New date set for launch of NeXT workstation

The computer industry's favourite vapourware box — Steve Jobs' NeXT workstation — has had its proposed launch date amended from late 1987 to February 1988, then March, then May, and now mid-June is rumoured to be the date. This follows the arrival of several prototype models at beta test sites and universities recently.

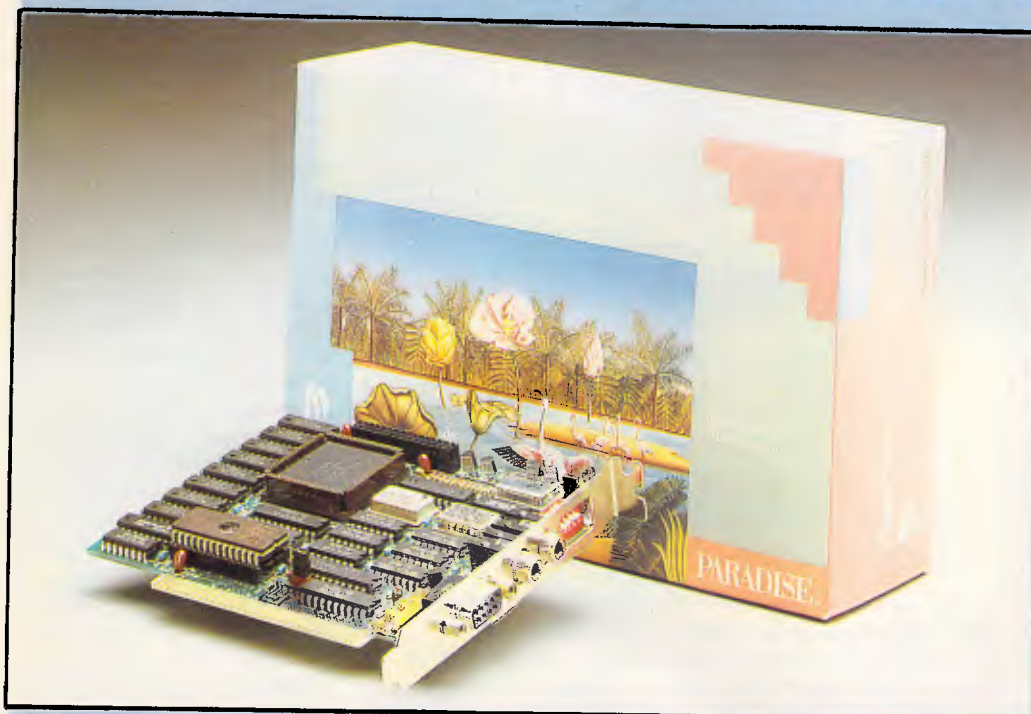

NeXT founder Steve Jobs will be accompanied at the launch by representatives from several major software developers, according to sources close to NeXT. Word processors, spreadsheets, graphics and databases are believed to be ready for the NeXT workstation, as is a multi-processing variant of the Unix operating system, with a custom graphical user interface developed by UK company IXI.

Only the monochrome version of the NeXT workstation is expected to be debuted in June, with a high-resolution colour graphic version due before the end of the year. Like Apple, which Steve Jobs co-founded before setting up NeXT, the new systems will be assembled at a highly-automated factory in California.

Add-in converts mouse from serial to bus

MicroSpeed's PDA (Pointing Device Adaptor) is the first PC-compatible add-in card to allow mouse users to convert a serial mouse to a bus mouse, according to Timothy

*J.I.T. Australia

AutoSwitch EGA 480 Card.

***High-Performance
Video For The
IBM Standard.***

The Paradise AutoSwitch/ EGA 480 card offers superior video performance in graphics and text for the IBM PC, XT, AT and Compatibles.

Features include:

- 640 x 480 Resolution
- 132 Column Text Mode
- 16 Colours from Palette of 64
- Flicker free Scrolling
- Complete EGA Compatibility
- AutoSwitching
- Automatic Monitor Detection

The EGA 480 AutoSwitch currently enhances the following software applications:

640 x 480 Display Mode

Auto CAD 2.18 or later
CAD Vance
GEM 2.1
Ventura Publisher 1.00 or later.
Microsoft Windows

For a demonstration, contact your local J.I.T. Dealer, or J.I.T. Australia:

J.I.T. (AUSTRALIA) PTY. LTD.

Telephone: (03) 720 1333.

Barry, Microspeed's president.

"Many users want a mouse, but since they already have a modem, laser printer or scanner in use on their two serial ports, they simply don't have the necessary extra port," Mr Barry explained. "We developed the PDA to let users change from a serial to a bus mouse without the expense of replacing existing equipment," he said.

Distributed by Bryte Software Services of Sydney, the Microspeed adaptor is claimed to work in all PCs and compatibles and can convert Microsoft, Logitech, and Mouse Systems mice (and other compatible serial mice) to a bus interface. The PDA, priced at around \$120, will be available in a few weeks.

Apple tries to break windows

It will be interesting to see how IBM reacts to Apple's lawsuit against Microsoft and Hewlett-Packard. Apple is claiming that Microsoft's Windows 2.03 and H-P's New Wave product infringe the copyright of the Mac's desktop or Finder.

When Apple first started throwing its legal muscles around the computer industry, Digital Research and Microsoft gave in with little fight. DR agreed to change the look of its desktop, which means that we now have a Gem without resizable windows and without its original 'trash can' to delete files. Microsoft gained a 'licence' from Apple for Windows 1.03, but the latest release — version 2.03 — in Apple's words 'goes beyond that licence'.

Comparing the two versions of Windows, it's hard to imagine that Apple is getting upset about the only noticeable visual differences between the two versions — resizable windows and movable icons.

Where IBM comes in, is that Presentation Manager,

Mitac International, one of Taiwan's largest PC manufacturers, has unveiled its Paragon 386E model, based around the 20MHz 80386 processor, and the MPS1000L PS/2 Model 30 clone. Distributed locally by Keller Automation, the new Mitac models will be officially debuted at PC '88 in Melbourne next month, according to Keller's national manager Nick Sikiotis.

The \$11,895 Paragon 386E features 2Mbytes of RAM (expandable onboard to 8Mbytes), SCSI adaptor, 100Mbyte 3.5in hard disk, 1.2Mbyte 5.25in floppy disk and a socket for an optional 80387 numeric coprocessor. With the SCO Xenix 386 operating system, the Paragon 386E can be used in multi-user mode with up to 50 terminals.

The \$1995 MPS1000L is claimed to be superior to IBM's PS/2 Model 30, as it uses a faster 10MHz 8086 (compared to IBM's 8MHz processor), and can be fitted with VGA graphics capability (rather than MCGA).

Mitac is experimenting with emulation chip sets from Chips & Technologies and Western Digital, and claims that future Mitac systems will offer "complete PS/2 compatibility and support for OS/2 and the Micro Channel bus."

the windowing front-end to OS/2, is based heavily on Windows, and I can't really see IBM giving in to Apple. If nothing else it certainly has a larger legal department as many clone-makers have experienced first hand.

So what is the fuss about?

My guess is that Apple is clearing away barriers to its selling Macs into the major corporate environments. Its

connectivity deal with DEC, announced two months ago, could mean Macs acting as front ends to minis and mainframes. And Apple is probably worried that it may be competing with IBM's own machines presenting a very similar interface under OS/2. Hewlett-Packard is also a mini and mainframe manufacturer which could build on NewWave to produce a win-

dowing icon-based, front end to its own large machines. That would be the end of Apple's opportunities in that market.

The whole matter smells for a number of reasons.

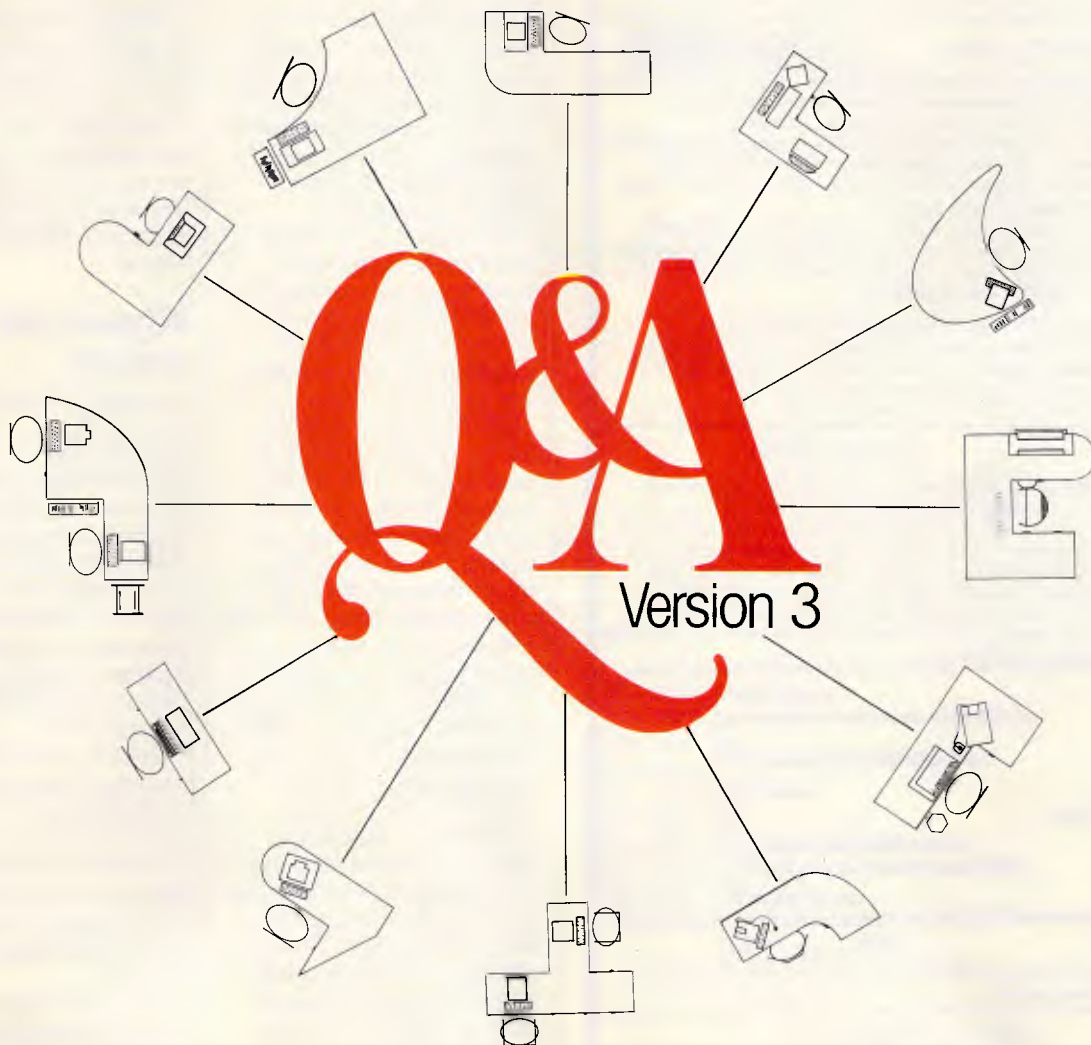

Apple has always billed the Mac as 'the computer for the rest of us'. But Apple's pricing of the Mac has put the machine well above the means of most of us. This is no accident. Apple consciously prices the Mac to be 'a product that people aspire to'. The machine's interface is wonderfully friendly, easily customisable, and hides you from the complexities of DOS. But there is a fear within Apple that the machine will be seen as a toy and so be shunned by the corporate buyers who hold the real buying power.

Apple intends to develop its high-quality, high-performance profile. Its new connectivity strategy — with the acronym OASIS (Open Architecture System Integration Strategy) emphasises the company's commitment to link in with the main connectivity standards — OSI, Token-Ring, LU6.2, DECnet and the like. But Apple wants it both ways. It wants an open architecture; it wants easy-to-use graphic interfaces on terminals; but it doesn't want anyone to get too close to its own standard.

Apple's chairman John Sculley isn't worried about icons or windows or mice. He believes that it is possible to innovate and develop using these desktop metaphors without infringing Apple's copyright in its operating system. But does he really think Microsoft's making its windows resizable will make or break his chances with the corporates?

Personally, I blame Digital Research and Microsoft for giving in so lightly in the first place. Gem in its version 2 and 3 still looks more like a Mac desktop than Windows ever did. Microsoft Windows doesn't even use icons for most of its operations. By not fighting Apple originally,

The only data management software to deliver real Local Area Network support is

If you don't believe us, ask Novell or Apple.

When you want a powerful, easy to use data management system with full network support, there is only one program that's got it all: the new Q&A Version 3.

Q&A Version 3 comes with over 100 improvements. But its uniquely comprehensive yet affordable network support is the big bonus for the business user. And you don't have to take our word for it. To quote Novell, "Q&A Version 3 fully utilises the record locking capabilities that LANs offer today's business".

Comprehensive LAN facilities built into Q&A 3.0 include:

- ☐ record locking support to allow multiple users to simultaneously access the same database
- ☐ five levels of password protection to preclude unauthorised entry into databases
- ☐ levels of protection can be set so that a user may read or read/write records, change form designs or change report designs

Q&A Version 3, first with Appleshare support
Q&A Version 3 supports the Appleshare network including record locking of databases. Apple are delighted – "It is very exciting to see PC users sharing

a Q&A database from a Macintosh II file server using the AppleTalk network with our AppleShare PC software" says Peter Friedman, Manager of Business Systems Marketing at Apple Computer. "Q&A Version 3 is the first MS-DOS file manager to offer such impressive record-locking support on an AppleShare network."

Inexpensive network growth

A Q&A Network Pack allows additional users to simultaneously operate a single copy of Q&A from a LAN. This offers an inexpensive way of extending Q&A throughout an organisation. Diskless workstations are fully supported. Installation takes only a few minutes.

Other powerful enhancements that come with the new Q&A Version 3 include:

- ☐ multiple file lookup capabilities
- ☐ improved file searching
- ☐ summary functions
- ☐ increased formatting flexibility
- ☐ font, laser printer and Postscript support
- ☐ advanced document search and replace, simplified mail merge and mailing label abilities.

For up to the minute information and pricing on Q&A Version 3, fill in the coupon below, phone or fax us today. Include a cheque for \$10 and we will include a comprehensive demonstration disk.

Solid Software

All items are for PC XT, AT & close clones.

LOTTOCHECK (\$69)

Due to some bulk orders we have been able to lower our price. **Dealers note:** We have appointed I.S.D. (International Software Distributors: Dealer Enquiries to I.S.D. on (03) 222 2288) to distribute Lottocheck. Includes a data-base of all past draws. With the Prizes option you select any 6 nos. or system entry (7-15), the program checks against the database, tallying up all prizes they would have won over the history of lotto. Other options includes Evaluate, Graph, Random. Database options are Add, Modify, Delete, Look, Browse and Export. Comes with an extensive handbook on using Lottocheck, winning strategies and math theory of LOTTO. You can try before you buy: A DEMO disk is available for \$15, refundable against purchase.

Comments from purchasers of Lottocheck:

'I think you have an excellent program in Lottocheck.' J. Remess, TAS.
'It is very encouraging to see an Australian company taking such pride in their product.' Peter Nicholas Pharmacy, Hermit Park, QLD.
'The manual is excellent.' C. McCarty, Braddon, ACT.

New!

SeeTree (\$49)

Most DOS Managers are a *shell* that aim to isolate the PC user from all MS/DOS commands. Yet many competent DOS users and some new PC users don't want a shell *instead* of DOS. But they do want a *visual map* of the directory tree from time to time. They do want to be able to delete and copy selected files in bulk. SeeTree displays a visual map of both, your disks (multiple) directory (ie. Tree diagram) and space taken by each directory (ie. bar chart). Users can easily select from the trees, a new *current directory*, then return to DOS, or stay a while and delete or copy bulk files. Corporate licences are available.

Microsoft now has a harder time defending its interface.

Ultimately, all these desktops are copies of the original ideas developed by Xerox. Xerox's Smalltalk and its descendants, such as the Sun Tools interface reviewed last month, still work better than the Mac. Why hasn't Xerox sued Apple?

The answer is that Xerox isn't threatened by Apple while Apple is threatened by the IBM/Microsoft alliance and by Hewlett-Packard iconising its customers first and locking out Apple.

What amuses me most is the fair-minded facade that Sculley puts on the whole thing. Microsoft is an Apple developer and Sculley does not want to sever his good relationship with Microsoft chairman Bill Gates. "Bill and I talked about it and we agreed that we should not let this complaint escalate to the point that it affects our other relationships," Sculley told me just a couple of days after the writ was issued.

Considering Microsoft's Excel is reckoned to be one of the reasons why many corporate users ever gave the Mac a second look, Sculley is wise not to risk his relationship with Microsoft just yet.

Gates' version of the story is slightly different. He had been talking with Sculley just a couple of days previously and Sculley had not mentioned the writ. "It came as a complete shock," he said.

Derek Cohen

Commodore's slow lift-off

Commodore has officially entered the Transputer stakes, with the announcement that it had a product nearly ready, at Hanover Fair. More significantly, it has also announced its Amiga 2500, which has the 68020 chip, and offers a 1008 by 1024 graphics screen.

The Transputer system is not to be taken too seriously as yet. Essentially, Commodore has two projects

under its wing: one has yet to work, and the other is very unambitious, using the Transputer as an add-in card on the PC side of an Amiga. Neither is seriously intended as a rival to the Atari Abaq.

At Hanover, one of these was available for inspection, but not working. The other was said to be "working, but stuck in an elevator somewhere."

Migent: the sequel

It wouldn't be quite right to say that Migent, with Emerald Bay, has launched a new database product that has it running hard in the opposite direction from the rest of the database world.

But it would come close, because the whole world is going after one 'standard' of database handling, SQL, and Migent has decided to produce a rival.

The idea seems to have a lot of merit, because all databases that use SQL are costly. And SQL is definitely the wave of the future. What Migent is offering is a low-cost alternative, but one which has the same advantages.

The snag is that no-one else will be able to use the Emerald Bay alternative unless they buy something from Migent.

Micro data storage, normally, has a whole bunch of information on a central disk, and when one user wants to search through it, it gets copied across to that user's PC (usually on a network).

The SQL concept, shared by Migent, is that central data ought to be analysed centrally. Only the results of the central search ought to be sent down to the user.

This may sound like a mini-computer concept (or even a mainframe concept) but there is more to it. Tomorrow's machines will have multiple applications running together, and they will definitely have serious problems when they try to access the same data. For ex-

WHY ARE PEOPLE CHANGING FROM \$500* PROJECT MANAGEMENT PACKAGES TO \$199* INSTAPLAN?

**The Project Planning and Presentation System
that works the way you think.**

InstaPlan Specifications

- 600 Activity capacity (640K RAM)
- 11 level outline of activities (WBS)
- Duration or man-hour estimates
- Unlimited schedule connections
- 11 level resource outline
- Users manual with tutorial

**"I like the ability to track the actuals
of when tasks are completed."**

*Larry Fortune, Director, Product Design
and Development, Fife Corporation.*

InstaPlan's Tracker option lets you compare status and progress against your plan. With it, you'll spot timing, workload and budget problems before they occur.

Tracker Option

- Allows you to freeze baseline plan
- Input actual schedule and resources used
- Variance mode of Gantt, Spreadsheet, Loading views show detail change from baseline plan

"Brown and Caldwell has been using InstaPlan for several months. We have decided to adopt it nationwide for our 160 project managers. We believe it can improve our ability to win contracts and to successfully manage them in today's competitive engineering market. InstaPlan appears to be an excellent tool for engineering."

Richard Aberley, President, Brown & Caldwell Consulting Engineers.

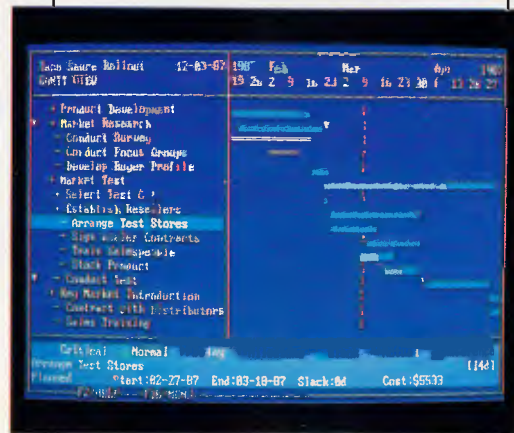

InstaPlan helps you organize your project in natural "top down" outline form. First you establish objectives and costs. Then define activities. Assign time, people and present results in a professional graphic form.

InstaPlan makes your work easier. Expense graphs. Schedule tables. Customized Gantt charts showing schedule connections in page or wall size. With InstaPlan presentation graphics, people can quickly see responsibilities and deadlines.

"I've used Superproject Plus & Harvard II. InstaPlan is clearly superior."

*Tim Malagon, President,
Project Information Services
Corporation.*

Fully 70% of the InstaPlan users we surveyed have tried the competition. So if you're dissatisfied with the program you're using now, we invite you to find out why so many people are switching. And if you're new to project planning software, it makes sense to start with the best.

- Individual calendars per person
- Resource levelling and smoothing
- Focus selects activities for screen or print
- 7 View, color control, many reports
- Context sensitive on-screen help
- Presentation Gantt Diagram shows schedule connections in page or wall sized format
- Data transfer to 1-2-3*/dBase III™

\$199*. ORDER TODAY.

ample: on a '386 micro with DESQview, I can run two copies of WordStar, and each can edit the same file. Which version is the correct one? Two versions of Lotus 1-2-3, and which is the 'final' version? Or a copy of a spreadsheet, fed over in a special format to a database manager, searched, and fed back into the spreadsheet — which may still be altering the data. Which one do you save?

Migent has already put together a product called Summit, which will give Lotus 1-2-3 users an in-built database (along the lines of Paperback's VP Planner). It has also built a 'C' language compiler which generates code to interrogate its own Emerald Bay database. And there is another language, called Eagle, which can be used by people who know Ashton-Tate's dBASE products.

Other people are writing other bits for it. Someone is doing an Emerald Bay interface for the Macintosh. Someone else is doing the Unix version. There will be Pascal, Basic, and other languages. There will even be an SQL version.

The problem is that Emerald Bay is proprietary — no one is allowed to know how to design a network database server which emulates it.

Programmers, typically, don't like writing in proprietary databases. A major obstacle to the success of the Ansa Paradox database (Migent will do an interface to this, too) has been Ansa's refusal to release details of how the data is structured.

Almost certainly, sometime in the next two years, Migent will have to reverse this decision, and allow other people to write Emerald Bay engines — or resign itself to seeing Emerald Bay remain a small and pretty corner of the database world — as Emerald Bay itself is a small and pretty corner of Lake Tahoe, Nevada.

Ashton-Tate is having a few problems, it seems, with its forthcoming incarnation of dBASE. At last count, 3770 bugs were known to exist in the product, over 400 of which caused the system to totally crash. The report preparation facility (pictured here) is especially plagued by bugs.

Unlike Lotus, which last month admitted it would have to delay the release of version 3.0 of 1-2-3, Ashton-Tate is keeping tight lipped about alleged development problems.

It does seem, though, that the company may have to postpone its planned July release date for dBASE IV.

There is speculation in the US that it will not be released until later this year.

New releases from Microsoft

Even before the ink was dry on last month's review of Microsoft C version 5, Microsoft had announced a new release of all its language compilers. The new releases not only improve the compilers but also add the ability of producing code for both MS-DOS and OS/2. Also announced at the same time was the long awaited OS/2 Developers' Toolkit.

Each language now comes with the new Microsoft program editor. This is a multi-file, multi-window and multiple language editor, which will run in real or protected modes. It can be configured to emulate WordStar, the QuickC editor, the QuickBasic editor or many other popular program editors. This will greatly aid people who use more than one of the Microsoft languages as there is now only

one user interface to learn.

Each language now includes the latest version of CodeView, Microsoft's source debugging program. This program allows compiled code to be run incrementally while viewing the registers, variables and the source code. This new version will debug both MS-DOS and OS/2 code and includes the new features of data browsing and the ability to follow multiple processes and threads in OS/2 applications.

The compilers themselves have been simplified and will all run directly from the new editing environment. The problems of inter-language calling have been simplified, making the inclusion of assembler in high-level languages much easier. The assembler now supports 80386/7 and compiles the source code up to 15 per cent faster.

The OS/2 Developers' Toolkit should increase

dramatically the rate at which new utilities are written for OS/2. The Toolkit, which works with all the languages, will improve a programmer's productivity significantly because there is only a single set of OS/2 calls to learn. Each piece of code makes use of OS/2's facilities through the application program interface (API) and this will support virtual programs of up to one gigabyte.

The Developers' Toolkit also contains the OS/2 Programmer's Learning Guide. This explains exactly how to get the most from the less familiar concepts contained in OS/2, such as multi-threaded applications and dynamic linked libraries.

Also shipped with the Developers' Toolkit are two new useful utilities.

BIND allows a single program to run under either OS/2 or MS-DOS. My heart leapt when I read this, thinking that at last DESQview's power would be provided in OS/2 for old DOS applications. No such luck. Bill Gates must still believe that DESQview's power is unreliable. BIND will only work with programs compiled with new compilers, so your old DOS programs will still have to run in the compatibility box.

ILINK is an incremental linker which only links in the modules which have changed. This will encourage people to program in a modular fashion and will improve the compile time dramatically if they do.

This all sounds wonderful to those who understand what is going on, but will only serve to confuse even more the people who don't. Programming under OS/2 will be easy. Programming under DOS isn't too bad either. Programming in both at the same time is going to be very confusing. I really feel Microsoft has done the power users of its programming languages a big favour with these releases.

Andy Redfern

Borland's Turbo Lightning FREE

NOW AVAILABLE FOR MACINTOSH!

Here it is...DATADESK'S TURBO-101 ENHANCED KEYBOARD for the 10 million PC users IBM just ignored!

IBM just announced their new redesigned "standard" keyboard for personal computers. There's only one problem: it won't work on your IBM computer if it was purchased prior to June 1986 or on any PC compatible purchased at any time!

Not to worry. Our new Turbo-101 Enhanced Keyboard gives you the layout and enhancements of the IBM with some logical improvements (see above photo). And it works on your existing PC, XT, AT, PCjr, AT&T, Epson and virtually all compatibles!

Get Borland's Turbo Lightning™ For FREE!

To really turbocharge your productivity, we are including, free-of-charge, Borland's red-hot Turbo Lightning software with each keyboard. Now, when using SideKick, WordPerfect, Microsoft Word, 1-2-3 or most popular programs, our Turbo-101 Keyboard will check your spelling as you type, gives you instant access to Random House's 80,000-word Concise Dictionary and 60,000-word Thesaurus and much, much more!

"Lightning's good enough to make programmers and users cheer, executives of other software companies weep," says Jim Seymour of PC Week. Sold separately, Turbo Lightning retails for \$99.95!

The Only Alternative

INTERNATIONAL

7650 Haskell Avenue
Van Nuys, California 91406 (818) 780-1673

Turbo-101 is a trademark of DataDesk International. Turbo Lightning is a trademark of Borland International. IBM and IBM AT are registered trademarks of International Business Machines, Inc.

*Price does not include adaptor cables required by certain compatibles • A limited offer — price subject to change without notification.

The Turbo-101 is the best data entry tool since the pencil!

For users of spreadsheets like 1-2-3, the Turbo-101's separate cursor controls and numeric keypad makes entering numeric data into cells and moving from cell to cell as natural as moving your fingers. And for word-processing, the 'Selectric' typewriter layout makes the Turbo-101 as easy to use as a pencil; and with the extra large Enter, Shift & Control Keys, you'll make so few mistakes, you won't even need an eraser!

SPECIAL OFFER!

ONLY **\$290** For both Keyboard & Software

Includes 30-day money back guarantee and 2 year full warranty.

To prove that we don't ignore you or your pocketbook, you get our Turbo-101 Enhanced Keyboard and Borland's Turbo Lightning for an astounding \$290.00*. No, you didn't read it wrong. During this amazing Introductory Offer you get both keyboard and software for less than most software programs by themselves! Now, if you're still feeling ignored, you can always do what you-know-who wants you to do...and buy a new computer to get their keyboard!

Up to now, DataDesk International may be one of the best kept secrets, but here's what's being said about our first end-user Keyboard/Borland software bundle:

"Who Can Pass Up a Deal? Department. Talk about an aggressive product!"
John C. Duorak,
InfoWorld Mar 86

"It solves all of the problems exhibited by their regular PC/XT keyboard...it's a great bargain!"
PC Productivity Digest
May 86

"DataDesk Intl. has designed a sturdy and handsome keyboard that has tactile response...is the hardware bargain of the year" says
Charles Humble, Oregonian
Jan 86

"The best part of the keyboard is the way it feels. It's ideal! And fast. I've never worked on a keyboard with a nicer touch."
Business Computer Digest
Aug 86

"It's a good keyboard. Good feel; the keys have tactile feedback. No mush at all. This is about as good a keyboard deal as you're likely to find...I have absolutely no hesitation in recommending the Model PC8700."
Jerry Pournelle,
Byte Magazine Sept. 86

"This keyboard is neat to type on and feels solid. It has tactile feedback keys...I can type much faster on it."
Test Drive Scorecard:
DataDesk-10 Key Tronics-9
Teleconnect Magazine

Back to the drawing board

In mid-February, a 160-page document from Apple Computer got into the hands of a local trade journal which quickly became big news in Silicon Valley. The document listed in detail Apple's previously rumoured design for its laptop Macintosh — code-named Laguna.

Apple had contended for some time that current flat panel display technology did not meet its desired goals for high resolution. According to the document, Apple has chosen the new 'Active Matrix Display' technology which lights each pixel via its own transistor, rather than just a block of pixels — thus giving it a very high resolution. The 9.8in screen has a resolution of 640 x 400. In fact, if you tried to use a mouse with conventional LCD technology, you would not even be able to see the pointer on the screen. With active matrix displays, however, the pointer is clear and crisp. Apple's laptop reportedly uses the new Motorola 68HC000 chip, a CMOS version of the 68000 series.

The major difference between the portable and the standard SE architecture lies in three ASIC chips codenamed Normandy, Omaha and Utah. These 2-micron, 84-pin CMOS ICs control most of the Laguna's function. Normandy, also dubbed the Power Manager, is an 8-bit microprocessor that replaces the real-time clock and Apple Desktop BUS transceiver. As a result, the memory expansion interface resides in Normandy. Omaha generates the video signal and screen refresh and Utah operates the serial port communications functions.

Another interesting feature of the portable Mac is a track-ball-type device that is built into the keyboard. This sits where you would normally find a 10-key numeric pad and is convenient as it does away with a mouse cable. A mouse is still available, however, as an optional

The methods used by Melbourne-based Terran Computers to manufacture customised gate arrays in Motorola's specialised US facility are an example to other local developers. Using a PC-based chip design CAD package, Terran engineers prepare the original schematic plans for the internal layout of the chip. They then perform complete logic testing, based on just the software design file, before a single chip is manufactured.

After subsequent debugging and re-arranging, the gate array design is finalised as a 'pattern file', which can be transmitted electronically, directly to the US fabrication plant. Using a 2400 baud modem, the Terran engineers directly control the final stages of design, by remotely driving the CAD system at the US facility. This control is facilitated by Motorola's dedicated international leased line from Australia to the US.

Using this technique, Terran will soon be producing the world's first custom chip set for small-footprint PCs based around Intel's new 25MHz 80386 processor. The three-chip CS8231 set incorporates the functionality of around 25 conventional components, reducing the number of chips required for an 80386-based AT-compatible to around half.

This will be Terran's first such project, following the recent announcement by Motorola that Terran has been appointed as its first Australian independent design centre.

Sample quantities of the CS8231 set should be available within 12 to 16 weeks, and the first prototype 25MHz 80386 systems based on the chip set are expected before the end of the year. The CS8231 is claimed to be unique in its use of a fully-associative 256-byte cache, allowing near-zero wait state operation.

Terran engineers initially designed the chip set so that the company's small-footprint T20 AT-compatible motherboard could be easily upgraded to an 80386-based system. The T20 is based on a similar chip set from US company Chips & Technologies, known as the New Enhanced AT (NEAT) chip set, specifically designed for 16MHz 80286-based systems.

extra. Although the Laguna's primary power source is AC-driven, there is an optional external battery system. The 2.4kg battery fits into a

recessed cavity and extends the machine's portability.

The document also explains that Apple uses SLIM (Slim Line IC Modules) cards

to expand the RAM and ROM. These manually-inserted cards are similar to the credit cards used for font delivery on some Asian printers and measure 85.6mm x 54.0mm x 3.4mm.

The main system memory is 1Mbyte of static RAM which is arranged in a 512k by 16-bit array. Mass storage is two 3.5in double-sided drives that can read and write on a 3.5in disk in three modes: Group Code Recording and Modified Frequency Modulation (MFM) on a 1Mbyte disk and MFM on a special 2Mbyte (1.6Mbyte formatted) floppy disk. Also available will be an optional, low power, one-third height 10Mbyte hard disk.

The Laguna is not short of external ports either. The serial communications controller, a 4MHz CMOS Z8530, drives two mini DIN-8 ports and, in addition, there is a SCSI port, a db-19 external floppy connector, a mini DIN-4 Apple Desktop Bus port, an external video connector, a 96-pin Euro DIN Mac SE-style expansion connector and a stereo audio phone jack. The machine also uses the Apple Digital Sound Chip with Sony sound chip support. The machine has some very nice features, but the document points out it will have a selling price in the region of \$US6000.

Apple's official comment on the document is that: "Apple will introduce no new CPUs in 1988." It is rumoured that Apple has already shown the Laguna to some industry leaders who felt that the ergonomic design and weight of the machine would hinder its acceptance as a true laptop even though they liked the basic specifications of the machine. As a result, it is believed Apple has opted not to release the machine this year but taken it back to the drawing boards to tweak it for a January 1989 release.

● Apple is not the only big company with a laptop in the wings. According to a former company official, Compaq had actually signed an agree-

The Theory of Evolution.

Survival of the system demands the ability to adapt to an ever-changing environment. Yet, the way most PCs are designed today virtually guarantees their extinction, sooner rather than later. To protect your PC investment against obsolescence, Wyse designed a *new* design that can evolve as technology does. We call it Modular Systems Architecture.[™] By incorporating all active computing functions—even the CPU—on plug-in cards, we've made upgrading or reconfiguring our new PCs as easy as adding a graphics board.

It's this easy to upgrade CPUs—and boost the power—of a SystemWyse PC.

For example, you can readily upgrade our general purpose 8 MHz model to a 12.5 MHz high performance 286 machine, or even a powerful 16 MHz 386. When faster microprocessors are available, you'll even be able to boost the performance of our top-of-the-line WYSEpc 386.

Three SystemWyse graphics solutions: our 8 MHz desktop with a Wyse VGA monitor; our 12.5 MHz professional desktop and VGA color monitor; and our 12.5 MHz, zero wait state system driving the WY-700 hi-res graphics display.

Introducing SystemWyse.[™] Our new PCs, in fact, are part of a comprehensive system for creating solutions. They link effortlessly with our terminals, monitors, and expansion boards. For desktop publishing, engineering workstations, and multi-user systems. Using industry standard operating systems. And backed by the company that makes more terminals than anyone but IBM, with over one million sold.

SystemWyse, above all, adapts to change—better than any other PC system. When survival belongs to the fittest, the only true survivors are those who remain fittest, longest.

WYSE

If we weren't better, we wouldn't bother.

ment to have a modified version of the Toshiba T3100 under the Compaq label for release last year but decided to pull it at the eleventh hour. Sources close to Compaq say that it opted for a similar design, but chose to "do it in-house" and will release it mid-year.

Tim Bajarin

Chips, chips and yet more chips

At a recent Dataquest Semiconductor Conference, participants discussed the growing prices and increased market demand for DRAM chips.

DRAM chips are the memory chips used in all computers, and the market will come under increased pressure as memory-hungry applications such as OS/2 and Presentation Manager come onstream. Memory prices have nearly doubled in the last year and the prices and production of these chips are almost exclusively controlled by Japanese manufacturers. One major industry vendor at the Conference felt that this tight Japanese control was a direct retaliation by the Japanese for the restrictions imposed by the US over earlier chip-dumping in the US.

But, American ingenuity is responding with a new memory-chip technology that could make DRAMs obsolete, along with just about all types of memory chips. This new technology is based on the 'ferro-electric effect'.

It has been known for some time that certain materials change polarity when an electric current is applied. Two start-ups, Krysalis Corp of Albuquerque, New Mexico, and Ramtron Corp in Colorado Springs, Colorado, claim that they have developed special ceramic materials and techniques for fashioning ferro-electric microcircuits on silicon, gallium arsenide and other semiconductor materials.

The ferro-electric memories (FRAMs) seem to promise

Larry, Moe and Curly go hi-tech? Not quite. These three gentlemen have reportedly stumbled across a cost-effective way to connect remote PCs to a Melbourne-based System/38. The solution comprises a Wall Data DCF11 18-port protocol converter from Tech Pacific (being helpfully pointed at by the fellow on the left), along with 'expertise and co-ordination' from Powerhouse Communications (the sharp-looking chap in the middle) and a stack of NetComm Trailblazer modems. The man on the right is from Pacific Dunlop's Consumer Goods division, which requested the project in the first place. He is smiling because the new solution, which allows up to 18 PCs to communicate through one host port, is much cheaper than international leased lines.

the best of all possible worlds. Unlike DRAMs, they don't forget when the power is turned off. When compared to EPROMs, FRAMs are both faster and longer-lasting.

Dataquest predicts that FRAMs could sprout into a \$500 million business by 1992. If these firms can prove that their chips can come to market quickly, it could put serious pressure on the Japanese to drop their prices on DRAMs.

Tim Bajarin

Create your own special effects

A product that has garnered a lot of attention in the Apple II world is Fantavision, an animation and special-effects generator. In fact, when originally introduced, it received Best Entertainment product of the year award for the Apple II. Now, Broderbund, the San Rafael, California-based software firm, has

just released this product under the IBM PC/Tandy and Amiga platforms.

(Broderbund's products are distributed locally by Imagineering — Ed.)

With Fantavision, any user, from beginner to professional animator, can create smoothly animated cartoons and 'movies' — the secret: special tools called 'tweening' and 'transformation'. These Fantavision tools can instantly generate dozens of intermediate images for every one that the user draws.

This does away with the need to redraw shapes constantly as in traditional cell animation. Instead, the computer creates smooth, fluid motion from one drawing to the next. In addition, the new versions include a library of digitised sounds and music.

The program also allows users to create special self-running show disks for viewing by others, even if they don't have Fantavision.

Tim Bajarin

General Electric chips in

Another hot development in chip technology comes from General Electric. A prototype of a 32-bit microprocessor with reported peak performance rates up to 40 mips has been developed by GE's Electronic Labs in Syracuse, New York.

Furthermore, the CPU has a 25 nanosecond cycle time and runs at speeds of up to 40MHz. The chip itself contains only the central processor and the integer arithmetic units and is designed to be a component in a multi-chip microprocessor unit.

The CMOS chip has 92,000 transistors configured on a 7 by 7mm die, according to David Lewis, a member of the design team. The GE chip uses an 8-member instruction set and provides 21 general-purpose registers and a 32-bit program counter. It automatically handles exceptions and interrupts.

If you compare this chip with an 80386 20MHz that runs at approximately four mips, you can see its potential power, especially in systems where parallel processing is called for.

Company officials did not say when the chip might be in commercial use, but they did confirm that many major computer vendors are looking at it for future integration.

END

In the July issue of APC, we will be presenting a full user group listing.

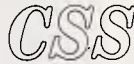

Would club secretaries please advise us of the user groups' activities, including contact name, address and telephone number for parties interested in joining. Notice of venues for regular meeting should also be included.

The address to write to is 'User Groups', Australian Personal Computer, 124 Castlereagh Street, Sydney 2000 — Ed.

HEARNE MARKETING SOFTWARE

The leading brands of American marketing and statistical software packages for microcomputers.

For IBM PCs AND COMPATIBLES

A truly remarkable comprehensive statistical package, menu driven and incorporating elements of artificial intelligence. Has the remarkable Scrollsheets systems for creating graphs at the touch of a button. Its intelligent interface can read/write all common file formats (Lotus 1-2-3, DBIII + DIF, SYLK etc.) \$1,100
CSS Demonstration Disk \$20

STATS +

Complete statistical package with statistical data base management and presentation quality graphics. Can be used as statistical supplement for Lotus 1-2-3, D-Base II Plus and other programmes. \$450

STATGRAPHICS®

This is a popular and easy-to-use statistics/graphics software package for your microcomputer. It integrates statistics with high resolution graphics in one single software system.
Full System \$1,650
Demonstration Disk \$20

StatPac Gold

A fully integrated package containing a complete data management system, basic and advanced statistics tables, graphics and utilities. This is the professional package for marketing researchers, social scientists, business analysts, medical researchers, etc. ... \$1,100
Statpac Gold Evaluation copy (inc. manual) \$100

Forecast Plus

Forecast Plus from Walonick is the most powerful forecasting tool ever created for the microcomputer. It is a graphics forecasting package for short and long range predictions. \$1,100
Forecast Plus Evaluation Disk (inc manual) \$100

SmartForecasts II™

The ultimate Expert System forecasting package for the marketing profession. You feed the data and the Expert System automatically selects the most appropriate forecasting technique and presents you with the results in chart or tabular form. Voted the best package of its type in the United States. \$1,100
Smartforecasts II Demonstration/Trainer Disk \$20

The Survey System

Program for the entry, editing, processing and presentation of survey research data. With its optional modules it is the most comprehensive package available for working with questionnaire data on a microcomputer \$1,500
Demonstration Package (inc manual) \$100

With this Strawberry program the ease of creating cross tabulations using a familiar spreadsheet format has to be experienced to be believed. With no tedious commands or layers of menus to plough through the user can produce very attractive cross-tabs by pointing and picking \$1,800
Evaluation Disk (inc instructions) \$100
Demonstration Disk \$20

Q-FAST

A menu driven program to computerise questionnaires which can be administered directly to interviewees. The program summarises, scores and prints the results. \$600
Also Perceptual Mapping and Cluster Analysis programs.

THE SALES MANAGER

The definitive sales management tool for executives in sales, marketing and general business. It contains Prospecting, Sales Forecasting, Lead Analysis, Sales Call Reporting, Commission and Quota System, Plan v Actual, Performance Monitor, Expense Tracking, Territory Management, Customer Information and more! \$1,000
Demonstration Disk \$20

NAMER by SALINON

A remarkable package for generating names for virtually anything - products, services, companies, programs, titles - with its own thesaurus and specialised data bases \$350

IDEA GENERATOR

This program guides the user through the thinking process, aiding in untangling complex situations, organizing thinking and helping develop alternative solutions. It uses eight thought-provoking techniques for stimulating new ideas \$350

REMINDER

One of the leading remembering systems on the United States market. It is a calendar, diary, to-do list and follow-up system. ... \$150
The Plus version adds a data base \$300

For the MACINTOSH

MacSS

A comprehensive high performance statistical package integrated with statistical database management functions and graphics. The ideal alternative mainframe statistical package designed for the Macintosh \$450

For all makes of PC

TYPING TUTOR III

A writer in the New York Times described it as, "The best typing instruction program for Personal Computing that I have seen."
IBM PC's \$90 Apples \$90
Commodores \$80 Macintosh \$110

Sales tax and delivery included in above prices. Site licences available to educational institutions. HOTLINE available to all clients. Dealer enquiries welcome. Prices subject to change.

Telephone: (03) 497 4276

HEARNE MARKETING SOFTWARE

37 Marshall Street, Ivanhoe, Victoria, 3079

The Power of Choice

When you need to know, keep a PSION handy - \$499

PSION, the world's smallest LOTUS 1-2-3* compatible, is a new dimension of personal computer. Packed with up to 320 K of memory the PSION easily carries an enormous capacity for information in the field. Built-in programs for extensive diary database and a sophisticated calculator are complemented by plug-in peripherals including modem interface.

IBM's Micro Channel

The method of power sharing provided by IBM's Micro Channel Architecture is not limited to OS/2 systems: many PCs can benefit from this CPU bypass operation. Pat Moran explains how.

In April, 1987, IBM announced a new series of personal computers — the PS/2 range. At the heart of this range was a new hardware architecture, the Micro Channel (MCA), which linked the central processor, memory and peripherals of the PC in an intelligent rather than a passive manner.

At the same time, IBM and Microsoft jointly announced a new multi-tasking operating system, OS/2. Immediately, speculation arose that OS/2 would only run on machines which were based around the MCA. IBM did little to dispel this myth, although Microsoft has continued to claim, and manufacturers other

than IBM have demonstrated that OS/2 will run on most existing 80286 and 80386-based PCs without the MCA.

Nonetheless, the Micro Channel is more than a new bus slot design for add-in cards and a pretty set of tracks on the motherboard. It is in fact a powerful, intelligent method of sharing processing

control between devices on the PC's bus. This power sharing can be used to improve the performance of multi-tasking operating systems such as OS/2 or Unix by bypassing the bottleneck of the CPU.

What is the Micro Channel?

The Micro Channel is a combination of several buses (address bus, data bus, transfer control bus, arbitration bus) and multiple support signals. The channel architecture uses asynchronous protocols for control and data transfer and provides several new features. These include:

- level-sensitive interrupts;
- arbitration between devices with different priorities;
- multiple masters; and a
- programmable option select.

The programmable option select (POS) was introduced to simplify the installation of adaptor cards in a PS/2 by eliminating switches and enabling card clashes to be detected automatically and resolved where possible. When clashes cannot be resolved, one of the adaptor cards is automatically disabled to enable the system to continue to function.

Although the POS is directly of interest to the end user, the other new features are of much greater interest to system designers and programmers who are considering how to exploit the new systems.

This article, therefore, concentrates on the aspects of the Micro Channel Architecture (MCA) which need to be understood in order to exploit its versatility, reliability and performance features. The MCA incorporates many features aimed at improving the reliability of the system, and at least detecting — if not automatically recovering from — transient or non-transient error conditions.

Multi Device Arbitration Interface

The Multi Device Arbitration Interface has been designed to support both Direct Memory Access (DMA) features and multiple masters, and to prioritise their access to the channel while providing burst capability with fairness and pre-emption features.

The aim of a DMA controller is to reduce the cost to the system processor of handling a peripheral. Without a DMA controller, the central processor has to be interrupted each time a byte is to be transferred to or from a device. Such an interrupt can be expensive since the processor has to save the registers and its state before servicing the device, and

MCA burst mode

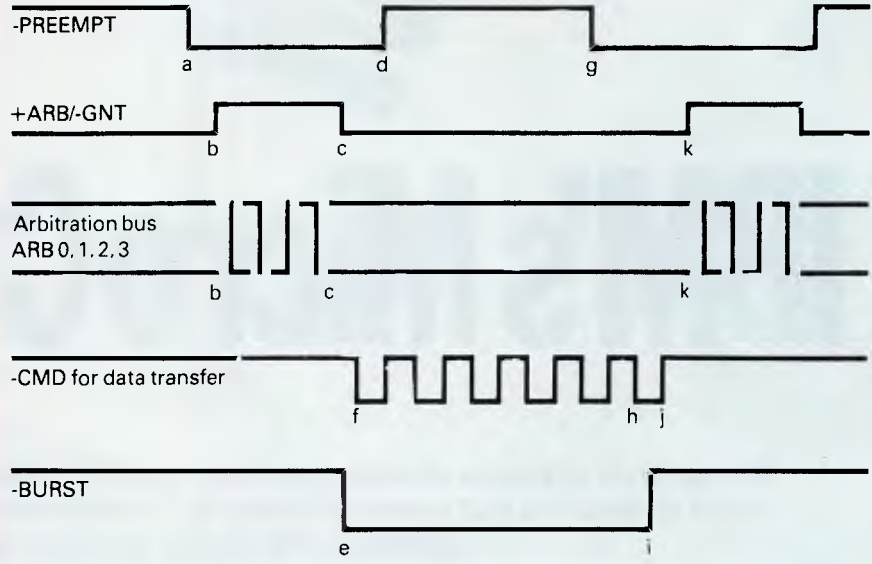

Fig 1

then it has to restore its state so that its interrupted activity can be resumed. The device is serviced either by reading data from the device and storing it in a buffer, or obtaining it from a buffer and sending it to the device. Consequently, the processor also has to maintain a count of the number of bytes transferred and update the buffer pointers as each byte is transferred.

'The design of the Micro Channel enables the PS/2 systems to be inherently more reliable than the previous PCs or ATs, even in complex environments with a multi-tasking operating system such as OS/2. The support for multiple masters lays the groundwork for providing powerful systems ...'

A DMA controller can be regarded as a very limited processor whose only function is to oversee the transfer of a block of data either to or from a device. The main processor simply has to inform the DMA controller of the device to be handled, the number of bytes to be transferred and the location of the buffer in

memory, and the DMA controller will relieve the main processor of the burden of transferring individual bytes between the device and the buffer. The processor is only directly involved when the entire transfer has been completed.

Both the PC bus and the AT bus support DMA controllers, but the MCA provides support for more controllers and gives much greater flexibility in using them. The DMA controllers on the MCA bus are effectively masters and are assigned unique priority levels.

Although the MCA supports multiple masters or devices, only one device can use the interface at any one time. The Central Arbitration Control Point (CACAP) is the logic on the main processor board which controls access to the interface. The main system processor is the lowest priority device, and is the normal or default user of the interface. The other devices have a higher priority and can temporarily take over the interface.

Whenever one or more of these other devices requires access to the interface, it is the function of the CACAP to initiate the arbitration sequence which is used to determine which device is to obtain access to the interface. The interface comprises seven signal lines on the channel.

+ARB/-GNT

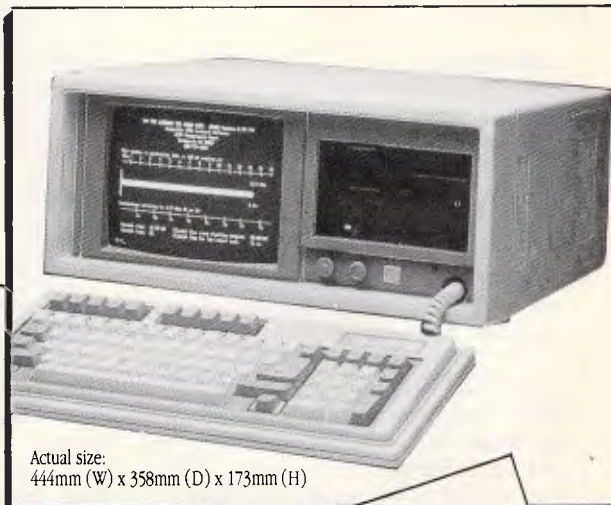

This is the arbitration/grant output signal from the Central Arbitration Control Point (CACAP) which notifies the devices if the interface has been granted to the highest priority device, or if the devices are to bid for use of the interface since an arbitration cycle is being initiated. Normally, this signal is the grant state

There are Computers here that are Smaller than this Ad!

ACTUAL SIZE/173 mm

DATAGO CRT

This little portable is practical, elegant and weighs only 8.5 Kg (without its Motherboard, Interface and disk drive), 11.8Kgs as a full system. Available as an XT Turbo, and AT with 640K RAM on board, and a hard disk of your choice, and the unbeatable crystal clear 9" dual frequency monitor display. All systems are compatible and run the most popular software and hardware products designed for IBM PC. Most importantly the specially designed ergonomic keyboard suffers in no way because of size.

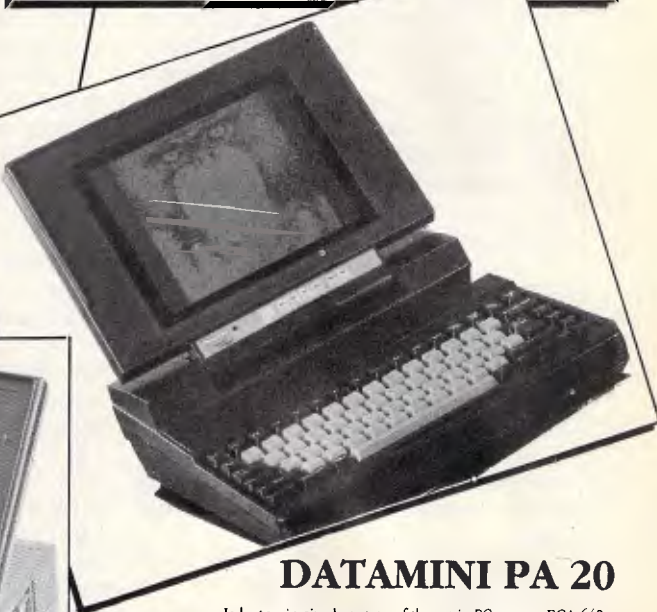

Actual size:
444mm (W) x 358mm (D) x 173mm (H)

DATAGO LCD

This little portables Liquid Crystal Display has excellent resolution and the total unit weighs in at only 6.4 Kg. But it's not short on muscle with 640K of RAM, 32KB of ROM and a 80286 (10MHz) CPU. Configured as an AT or XT.

DATAMINI PA 20

Is laptop in size but state-of-the-art in PC power. EGA 640 x 400 Gas Plasma super clear display, 1 x 3.5" 720KB/1.2 MB floppy drive, 1 x 20 MB Hard Disk, two serial and one printer ports. The PA 20 is a high-speed PC built for sophisticated applications like advanced CAD/CAM as well as all available programmes for AT. AT compatible. Its main board holds an 80286 CPU, 640KB RAM, socket for an optional 80287 co-processor and 32K BIOS ROM.

DATAMINI LA 20

70mm (h) x 309mm (w) x 380mm (l) and weighing in at 5.9 Kg this tiny and powerful Laptop is the PC that can go wherever you go!

AT compatible with 640K RAM and 10MHz speed with 2 3.5" floppy drives and LCD display.

Runs on rechargeable batteries or AC power.

and the bus is used by the highest priority device which bid at the last arbitration cycle. Whenever the CACP makes the signal active — that is, places it in the arbitrate state — data is not transferred over the interface but each device bids for the right to use the interface once the signal has reverted to the grant state.

—ARB0—3

When the +ARB/—GNT line goes to the arbitrate state, each device that wants the channel places its assigned arbitration level on the arbitration bus (which consists of the four signals —ARB0, —ARB1, —ARB2, —ARB3) and then monitors the arbitration levels placed on the bus by other devices. The higher value (that is, lower priority) device removes the lowered order bits of its bid, so the highest priority device is left with its arbitration level on the bus. The CACP which raised the arbitration signal times out after 300 nanoseconds, and automatically returns the +ARB/—GNT signal to the grant state which informs the highest priority device left on the arbitration bus that it is the controller and that it can utilise the channel. The device normally only owns the channel for one transfer on the bus and, after that cycle completes, the ownership of the channel is returned to the default owner which is the system board processor.

—PREEMPT

When a device requires access to the channel, it makes the —PREEMPT signal active and keeps it active until it has been granted control of the channel. When the CACP sees the —PREEMPT signal becoming active it initiates a new arbitrate/grant cycle, and the highest priority device requesting control will obtain it.

—BURST

Some devices normally transfer data in bursts that are separated by long, quiescent periods: for example, a disk file is such a device. Typically, such devices incorporate a buffer which is used to hold a chunk of the data which is then transferred a byte at a time across the channel. Burst mode attempts to enable such devices to transfer entire blocks directly to storage without the need to store the data in an internal device buffer.

Such a mode also reduces the amount of time spent in arbitration mode since there is no need to enter arbitration for each transfer (byte or word) across the channel.

A device which wishes to operate in

burst mode activates the burst line and holds it active until it completes the transfer of the block. The CACP will not produce arbitration cycles when another device requests the channel during burst mode. The burst mode device is responsible for monitoring the —PREEMPT line and, if it becomes active, it will terminate the transfer tidily and relinquish control of the channel by removing the burst line. The bursting device does not, however, participate in the arbitration cycle which will immediately follow.

Figure 1 shows the timing relationship between the signals described above when burst mode occurs. The sequence of actions is as described below:

1) The —PREEMPT signal goes active to indicate a device is requesting control of the channel.

2) The +ARB/—GNT signal goes to the arbitrate state and the arbitration procedure starts to determine the highest priority.

3) After the time-out period which allows the arbitration bus to settle, the CACP changes the +ARB/—GNT signal to the grant state.

4) The device granted to the channel makes its —PREEMPT signal inactive to clear its request for control.

5) As a burst mode device, it then makes the —BURST line active to enable it to keep the channel for more than one transfer.

6) It then transfers data with each cycle of the —CMD signal.

7) If another device requires the channel, it makes the —PREEMPT line active. Since there is a burst transfer in progress, the CACP takes no immediate action.

8) The controlling device can do some more transfers to enable it to suspend its actions tidily.

9) The —BURST line is released after the leading edge of the last —CMD pulse in the transfer.

10) On the trailing edge of the last —CMD pulse, the CACP will action the outstanding —PREEMPT signal (as there is no longer a burst occurring).

11) The CACP makes the +ARB/—GNT signal go to the arbitrate state and the process begins again.

As described above, a high-priority bursting device would in fact only relinquish the channel for one cycle and then grab it back again. The simple algorithm above runs the risk of a high-priority high-bandwidth device 'hogging' the channel. To prevent this, each device which implements burst mode must also implement the fairness algorithm which guarantees each device a share of the channel in a priority determined se-

quence. When a bursting device relinquishes control, it is placed in the 'hogpen' (known more formally as the Inactive State Queue) and must wait until the common —PREEMPT line goes inactive before it competes for the channel again.

The common —PREEMPT line will only go inactive once all competing devices have had access to the channel. When —PREEMPT does go inactive, all the 'hogs' are released and will participate in the immediately following arbitration cycle.

Since a burst-mode device can utilise all of the available bandwidth if there are no other competing devices, the use of the burst mode can produce significant increases in the effective transfer rate of a device.

Each device on the channel must use a unique arbitration level or the above arbitration system would result in two devices, each thinking it had control of the channel, and the uniqueness of the arbitration levels is checked during POST (Power On System Test). Each adaptor must allow its arbitration level to be program-selectable to any of the available arbitration levels (0-15). In practice, the configuration utilities will never select level 15 as this would clash with the system processor.

This requirement means that there can never be more than 15 active on the channel at any one time. The POST will disable some cards if more than 15 are active on the bus on power-up.

DMA ports 1,2,3,5,6,7 have a fixed matching arbitration level, but DMA ports 0 and 4 have a programmable arbitration level. The allocation of arbitration levels is shown in Fig 2.

As can be seen, memory refresh has the highest priority and is initiated from the CACP, and the system board processing has the lowest priority (excluding the hogpen). The reason that the processor is allocated the lowest priority is that it continually uses the channel to fetch instructions and the data manipulated by the instructions. Input/output devices only need sporadic access to the channel since their data rate is often very low (for example, a 9600-baud serial link only needs to transfer a byte over 1000 microseconds). Even adaptors which need to transfer data at a high rate do not do so continuously but in short bursts (for example, an Ethernet adaptor sends and receives data at more than 1Mbyte per second but may only process 50 packets every second).

Since the processor is the lowest priority device it can retain the channel once it has control without the overhead

THE NEW 386 MOTHERBOARD.

THE ANSWER TO YOUR PC'S PRAYERS.

386 SPEED

Don't let your PC give up the ghost—Hauppauge has just arrived with a new spark of life: the 386 MotherBoard. Our new MotherBoard graces your PC, PC/XT or compatible with speeds equal to the IBM PS2 Model 80. And faster. Because we've built in 1 Megabyte of high speed RAM and a 387 math coprocessor socket for speeds that make even irreverent users humble with awe.

OS/2 Compatible To ensure a long, fruitful life, our 386 MotherBoard is compatible with the PC/AT (BIOS and I/O) — allowing you to run the new generation of DOS, OS/2. Equally inspiring, our MotherBoard runs Windows/386, UNIX V and PC-MOS/386. And if you need more power, you'll find two 16-bit expansion slots that accommodate the latest I/O expansion card. No 386 accelerator card gives you so much versatility. **Only our 386 MotherBoard gives your PC a future with unlimited possibilities!**

Technical Features ■ 16 MHz 80386 ■ 1 Megabyte of 100 nsec 4-way interleaved RAM ■ PC/AT compatible I/O and BIOS for support of OS/2 ■ Six 8-bit expansion slots ■ Two 16-bit expansion slots ■ One 32-bit expansion slot for up to 12 Megabytes of high speed memory ■ Battery-powered clock/calendar ■ Optional 16 MHz 80387 math coprocessor

"Judged on price, performance, and ease of installation, the Hauppauge 386 MotherBoard is easily the Upgrade Product of the Year."

— Robert Luhn, PC World

of arbitration requests, until one of the other devices signals that it needs to use the channel by activating the —PREEMPT signal. This means that an arbitration cycle is only required when a device other than the system board processor requires the channel.

The performance benefits of using burst mode on the new Micro Channel are such that a disk, for example, can transfer data twice as fast across the channel as it could across the AT bus.

MCA reliability

In the description of the Multi Device Arbitration Interface, it was stated that the central arbitration control point will not initiate an arbitration cycle while a device is asserting the —BURST signal. If a burst-mode device were to gain control of the channel and then refuse to release control, memory refresh operations would be impeded which would cause soft-memory errors.

To protect the system from such devices the CACP implements a time-out, which is started when —PREEMPT goes active and gives the bursting device 7.5 microseconds to release control. After the time-out period has passed, the CACP will place the +ARB/—GNT line in the arbitrate state and therefore remove the grant from the bursting device. The memory refresh activity has the highest possible arbitration level and will set —PREEMPT every 15.6 microseconds to enable a refresh to occur.

Any memory card or device which detects an error that threatens the correct continued operation of the system must drive the channel check (—CHCK) signal active, and it must remain low

Allocation of arbitration levels

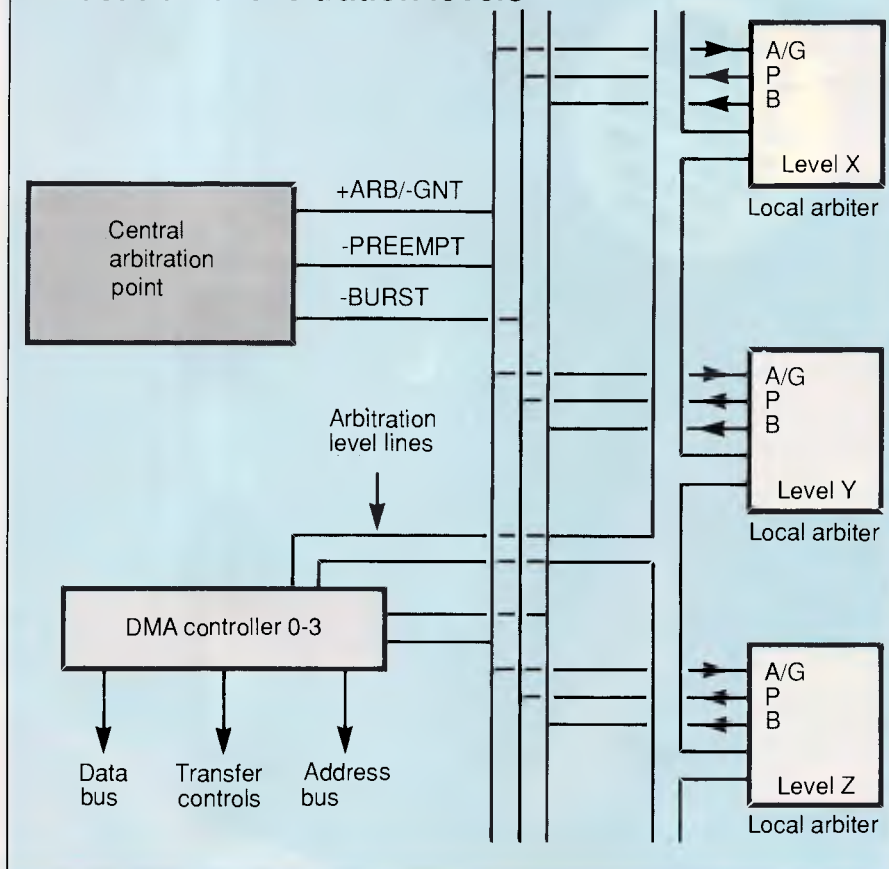

Fig 2 Central arbitration point, 8 DMA channels and diskette arbiter are all one chip!

until the —CHCK interrupt handler resets it. In addition, the card must set the channel check bit in the card's option select address space. This bit is interrogated by the —CHCK handler for each card position until all reporting cards have been identified.

Level-sensitive sharing interrupts

All the Micro Channel system board features and channel attached devices employ the same level-sensitive mechanism for interrupting the processor. Each card must also implement an interrupt pending indicator which is reset by the normal servicing of the device. Each card must hold the level-sensitive interrupt active until it is reset as a direct result of servicing the interrupt. The advantages of the new structure are as follows.

Phantom or lost interrupts should be less frequent and more easily identified as there is an interlock between the hardware and software that supports the interrupt service. With the previous PC bus, interrupts were 'edge sensitive' which meant that it was the change from inactive to active state which caused the interrupt request into the processor. With a level-sensitive interrupt, the interrupt request into the processor remains pending until the device makes the signal inactive in response to the normal servicing of the interrupt.

With edge-sensitive interrupts an inter-

MicroHelp programmer's tools from FMS

Mach 2 Version 2.0

Assembly Language Subroutine Library
for IBM and Microsoft BASIC Compilers.

Mach 2 is a high-performance library of assembly language subroutines that you call from your compiled programs. With Mach 2, your programs have a crisp, professional look and feel and (in most cases), result in smaller EXE files. Some of the routines are written to speed up functions you normally perform in BASIC. Others are there to provide you with functions not normally available in BASIC, so you can do just about anything your computer is capable of.

Mach 2 is compatible with QuickBASIC 1 through 4, IBM's BASCOM 1 and 2, Microsoft BASIC compiler 5.36 and Microsoft Business Basic. Note that no knowledge of assembly language is needed, nor is an assembler program necessary in order to use Mach 2.

Mach 2 includes pre-built user libraries for QB 2, 3 and 4, a linking library and all the necessary .obj modules for building your own libraries. Assembly source code is available at an extra charge.

Mach 2 includes: Window Manager (also draws boxes) ☐ Extra Memory Manager - store/sort/search data using all available DOS memory ☐ Controlled input routine ignores Ctrl-C and Ctrl-Break ☐ Display data 4-10 times faster than BASIC-instantly when compiled ☐ BLOAD/BSAVE in compiled BASIC ☐ Read/write files at DOS speeds ☐ Scroll windows any direction ☐ Print using for numbers up to 6 times faster than BASIC ☐ Change file attributes - hide, unhide, read-only, etc. ☐ Get & change default drive/current directory ☐ DOS/BIOS function calls and interrupts ☐ Many more functions, sample programs and a manual explaining the use of each routine.

Price \$185

Stay-Res Plus

☐ Select your hot key, including "shift" type keys. For example, you can pop up with Ctrl-Alt.

☐ Pop up your program with a POKE from another program.

☐ Pop up by POKE'ing special characters into the keyboard buffer. In this case, your program will pop up only after all other characters have been read from the keyboard. This feature makes it easy to pass characters to another program.

☐ Dynamic arrays can be used in your programmes.

☐ Files can be left open between pop ups.

Pop up according to the date and time. Reset the date and/or time anytime. This feature can be turned off whenever you like.

Pop up when a ring is detected on selected COM ports. You select which port(s) should be checked by Stay-Res Plus. This feature can be turned off or reset at any time.

☐ If the system has Lotus/Intel/Microsoft Expanded Memory available for use, your program takes only 7K of DOS memory.

Price \$265

The MicroHelp Toolbox

Compatible with QuickBASIC 2-4 and BASCOM 6

This product is a library of QuickBASIC subprograms and functions that drastically reduce your programming time, while giving your programs a crisp, professional look and feel. As a bonus, we include a routine that lets you set the DOS Errorlevel from any version of QB as well as BASCOM 6.

Because many of the subprograms are video oriented, we've built in a few routines from our **Mach 2** assembly language library in order to speed up your programs.

Since all the subprograms and functions are written in QuickBASIC, and you get all the QB sourcecode, you can modify them to your heart's content. We even suggest specific modifications in the huge, easy-to-use, fully indexed manual.

In addition to the manual, you get diskettes containing: QB source code, a prebuilt User Library for QB 2 and 3, a Quick Library for QB 4 and BASCOM 6, plus four LINK libraries (BCOM and BRUN for QB 2/3 and QB 4). We also include .MAK files and declarations for QB 4 as well as batch files for maintaining and rebuilding libraries.

Each routine has a small sample program demonstrating its use. **Price \$185**

rupt could be lost if it occurred while a previous interrupt was still being serviced, as the interrupt signal was already in the active state. The second interrupt could not cause the inactive-to-active transition and, therefore, the processor was not notified of the second interrupt. With level-sensitive interrupts, each interrupt request will be notified to the processor.

The importance of this change to the reliability and flexibility of the system is underlined by the fact that IBM has built circuitry into the system board which prevents any attempt to re-program the interrupt controller to operate in edge-sensitive mode.

Each interrupt level can be used by a mixture of sharing and non-sharing hardware. An interrupt handler which is to be used in a shareable environment

'The channel architecture uses asynchronous protocols for control and data transfer and provides several new features.'

must follow certain rules to enable the system to operate. When the interrupt handler is set up, it must note the address of any existing handler for the interrupt level. When the interrupt level handler is invoked to process an interrupt, it must check that the adaptor that it is handling has an outstanding interrupt request by accessing the interrupt pending bit on the adaptor. If the adaptor is in the process of interrupting, it is serviced normally and the interrupt controller is reset.

If any other card on the same level still requires service, then the interrupt request line will still be active and cause the chain of interrupt handlers to be re-entered. If the handler finds that the adaptor does not have an interrupt pending, then it passes control to the previously-existing interrupt handler. In this way, control is passed down the chain of interrupt handlers until all requesting devices are serviced.

An interrupt level can in fact be shared between a device on the system board and a device attached to the channel service system board as long as the devices conform to the standard rules. It should be noted, however, although many devices can share an interrupt level, the time between the interrupt being raised and the appropriate inter-

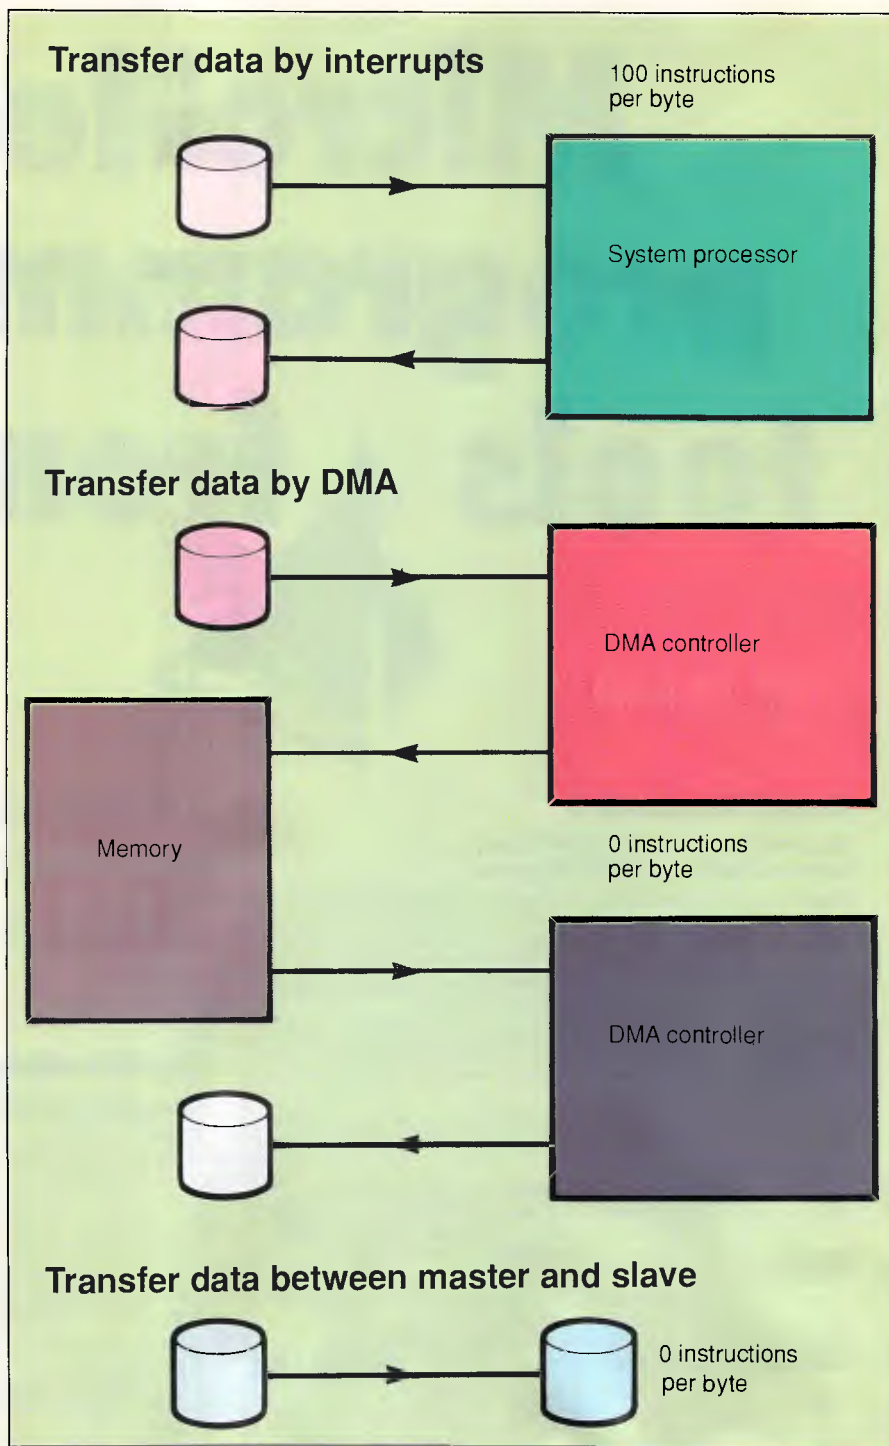

Fig 4

rupt handler processing the interrupt increases as the number of devices increases.

Multiple masters

To understand the benefits which can be gained from the use of an additional master on the channel, we need to understand the actions of the system board processor and the DMA controller when

transferring data to and from a device. It should be noted that each port of the DMA controller on the system board is in effect a master but one with very limited abilities.

We will consider what is involved in the case where some data is being transferred from one device on the channel to a second device on the channel — for example, when a file is being copied from one disk to another.

There are three roads to multi-user computing. Only one can guarantee a smooth trip.

Businesses, big and small, have come to rely on Personal Computers. Few can get by with just one. As you exploit the potential of your PCs, the demand for more computing power, storage and terminals will grow too. But bigger systems can also lead to problems if you choose the wrong growth path:

Does your system stall in heavy traffic?

How are file backups handled?

Will single user software work reliably with more than one user?

Is further expansion expensive?

There are at least three ways to build a multi-user PC system — Unix/Xenix, a Local Area Network, a clustered CPU system.

Unix/Xenix Systems

Unix is a great operating system but not for business applications.

Most software is written for DOS so a lot of programs just aren't available in Unix.

Unix is sophisticated, so staff need extra training to use the system effectively.

With one CPU doing all of the work, you will find yourself in the slow lane when the workload builds. And even with a fast processor, you'll notice the drop in speed as more users are added.

Local Area Networking

A LAN is a good way to link existing PCs together to share resources. But LANS are expensive. Each user needs their own PC, network interface and cabling, as well as the file server.

Also, since information moves over a single wire, reading and writing large data files is slow.

And system management can become a nightmare as users keep copies of files on their own systems that are never backed up.

PC PLUS

ALLOY's PC PLUS combines the best of both worlds.

PC PLUS works with IBM's Personal System/2, PCs, XT's, and AT's, the Compaq 386 and other compatibles.

Each user has a PC SLAVE card and their own terminal.

PC PLUS keeps the CPUs together so data is moved 16 bits at a time — not one. This is enhanced by RAM-based disk caching.

With one processor per user and high speed data transfer, PC PLUS is fast, very fast. And as more users are added, you can be sure that performance won't drop off.

Compatibility is no problem. PC PLUS is DOS, Novell NetWare, and Orchid PC-NET compatible, so your investment in software and staff training are not wasted.

ALLOY's NTNIX operating system allows users to share information. System security allows files to be locked or made available to other users, as required. And print spooling is supported so you can share printers.

Processors share common data storage, so system management is easier to handle. In fact, with ALLOY's RETRIEVER Tape Backup System, this can be handled for you automatically. All you need to do is insert the tape. If you would like to know more about PC PLUS, contact your ALLOY dealer now.

OUR TRADE-INS ARE THE CAT'S WHISKERS!

Until now, the trade-in value of most used PCs was a joke. Not any more.

Microcomp give you a realistic trade-in price and the opportunity to re-equip from scratch with your choice and combination of latest technology PCs. We can build in options such as full on-site maintenance, service back-up that's the best in Australia, training or retraining programmes to your specifications, a wide range of consumables and professional

office automation and communications consultancy.

Naturally, you can purchase or lease but before you do, allow us to explain the benefits of our Operating Lease option. It offers improved tax deductibility and flexible terms from six months to six years. If you're hunting for innovative PC ideas, talk to us about your requirements today.

THE 'PURRFECT' COMPUTER SOLUTION

CHECKOUT

In the case where the processor is directly handling each device we would have the situation where the processor would be interrupted for each incoming byte, and would then execute code to identify the source of the interrupt as well as transfer the data from the device to the processor. It would then have a similar set of actions to write the data out to the destination device. Hence, each byte crosses the channel twice and there is a significant processor overhead servicing the devices

(which will involve further memory accesses across the channel). Servicing each interrupt and organising the transfer to or from the device can cost at least 100 processor instructions to be executed for each byte transferred. This is shown in Fig 4.

The DMA controller can be used to transfer a block of data with a greatly reduced processor overhead. The processor would instruct the DMA controller to transfer a block of data from the input device but would not be involved in the

IBM and Apple Mac owners FREE OFFER

Let Attaché Software introduce you to computerised accounting the easy way, absolutely FREE and without obligation.

Attaché, the biggest name in micro accounting systems, has prepared a demonstration disk that runs just like the real thing.

Just load it into your IBM compatible or Apple Mac and examine Attaché in the convenience of your office or home.

Attaché offers: accounts receivable, order entry, invoicing, sales analysis, inventory, accounts payable, department/project costing, general ledger and payroll.

This is your risk free opportunity to prove to yourself how Attaché can streamline your accounting. At prices starting under \$1,000, you can't go wrong.

Simply mail your FREE OFFER coupon today or phone (02) 929 8700. Distributors Australia-wide.

- Easy to learn and use - you can become proficient in only two days.
- TAFE training course available
- Fully integrated 2D and 3D design and drafting with parts lists and bill of quantities incorporated.
- User defined symbols displayed in graphical menu
- Dynamic co-ordinate display
- Entire work session can be reviewed - great for training and back up
- Design your work in 3D perspective
- Dynamic rotation of work in 3D perspective
- Plus many more powerful and effective features

WITH QIKDRAW YOU GET THE BEST OF EVERYTHING AT NO EXTRA COST!
COMPLETE SYSTEM, INCLUDING COMPATIBLE COMPUTER FROM AS LOW AS \$4990.

How to tell the difference between DESQview™ 2.0 and any other environment.

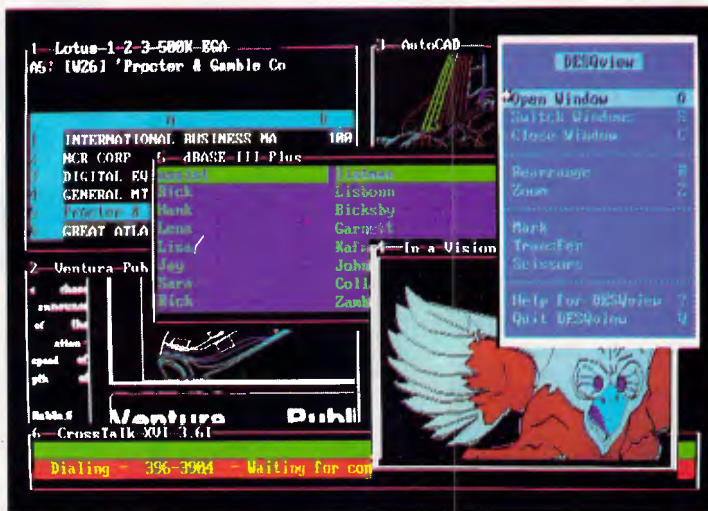

Selecting DESQview, the environment of choice, can give you the productivity and power you crave, without the loss of your old programs and hardware. If you like your existing programs, want to use them together, transfer data between them, print, sort, communicate with or process-in-background, yet still have the need to keep in place your favorite PC(8088, 8086, 80286 or 80386), DESQview is the "proven true" multitasking, multi-windowing environment for you. Best of all, DESQview 2.0 is here now, with all the money saving, time saving, and productivity features that others can only promise for the all-too-distant future.

And with DESQview's new graphics enhancements for Hercules, CGA, EGA, and VGA, Version 2.0 still offers the same award winning and pioneering features for programs that earned DESQview its leadership, only now you can also run desktop publishing programs, CAD programs, even GEM™, Topview™, and Microsoft Windows™ specific programs. In some cases you'll add as little as 10-40K to your system overhead. Now you can have multi-tasking, multi-windowing, break the 640K habit too and still get an auto dialer, macros, menus for DOS and, for advanced users, a new complete application programmer's interface capability. No wonder that over the years, and especially in recent months, DESQview, and now DESQview 2.0 have earned extravagant praise from some of the most respected magazines in the industry.

"Product of the Year" by readers vote in InfoWorld.

"Best PC Environment" by popular vote at Comdex Fall in PC Tech Journal's "System Builder" Contest.

"I wouldn't want to run an IBM

One picture is worth a thousand promises.

or compatible computer without DESQview"—InfoWorld, Michael Miller.

"A colossus among windowing environments"... "will run almost anything"—PC Week, Marvin Bryan.

"Windows, promises, but DESQview delivers"—MICRO-TIMES, Birell Walsh.

No other environment has consistently pioneered features, openness, and productivity. See for yourself. Send in the coupon. The possibilities are endless with DESQview 2.0.

Attention Programmers: For more information about Quarterdeck's API, and future 386 program extensions, call us today.

SYSTEM REQUIREMENTS

IBM Personal Computer and 100% compatibles (with 8086, 8088, 80286 or 80386 processors) with monochrome or color display; IBM Personal System/2 Memory: 640K recommended; for DESQview itself 0-145K * Expanded Memory (Optional): expanded memory boards compatible with the Intel AboveBoard; enhanced expanded memory boards compatible with the AST RAMpage * Disk: Two diskette drives or one diskette drive and a hard disk * Graphics Card (Optional): Hercules, IBM Color/Graphics (CGA), IBM Enhanced Graphics (EGA), IBM Personal System/2 Advanced Graphics (VGA) * Mouse (Optional): Mouse Systems, Microsoft and compatibles * Modem for Auto-Dialer (Optional): Hayes or Compatible * Operating System: PC-DOS 2.0-3.3; MS-DOS 2.0-3.2 * Software: Most PC-DOS and MS-DOS application programs; programs specific to Top View 1.1, GEM 1.1 and Microsoft Windows 1.03 * Media: DESQview 2.0 is available on either 5 1/4" or 3 1/2" floppy diskettes

CHECKOUT

transfer of each byte. The use of the DMA controller means that the byte would be transferred across the channel from the device to the DMA controller, and then again across the channel to the memory area specified by the processor. The same double transfer would occur when the data is being transferred to the output device. Therefore, the use of the DMA controller would cause each byte to transfer across the channel four times (but would still be more effective because of the greatly-reduced system processor overhead). This, too, is shown in Fig 4.

In the case where one of the devices is a master it can control the other device directly as a slave, and the master can process interrupts from the slave directly off the channel without involving the system processor. If, for example, the input device is the master, it can directly transfer each received byte to the output device with each byte being transferred across the channel only once, and the cost to the system board processor of setting up the master is probably less than the cost of setting up the two DMA operations. This is shown in Fig 4.

From the above example, it can be seen that the use of a master device can require only 25 per cent of the channel transfers that are needed by a DMA controller while requiring no additional processor overhead.

Enter OS/2

The real power of multiple masters will only be really exploited when the master becomes capable of providing a significant amount of functions for each request from the system board (or, indeed, some other master).

One possible such master would be a complete file system with internal disk drive(s) and controller which would respond to OS/2 or DOS level file access requests. Such a master would carry out the directory searches and the maintenance activities (such as updating the FAT) with no channel accesses, and only the requested data being transferred across the channel. It would support multiple simultaneous transfer requests and use various techniques to optimise access to the integral disks. In the case of the example presented here, the file copying could be achieved without any data being transferred across the MCA interface and with no interference to the operation of the system board processor.

Such intelligent masters cannot be fully exploited or cost-justified when PC-DOS is being used since DOS waits for each transfer to complete before continuing with the application. Under DOS, such masters would provide very little obvious

OUTSTANDING SOFTWARE

For IBM PC's and Compatibles

At last FREE-SOFT® International is here! We have more than 900 programmes in our international library, you can get any disk for \$12, and if you join FREE-SOFT NETWORK® it will be \$10 only per disk! plus getting our SOFT-LINE® Newsletter.. full of tips to help you get the most out of your PC! plus receiving regularly our SUPER-SOFT® sheet listing in details the best 10 software programmes available in our library! plus SPECIAL PRIVILEGED STATUS® .. you will have advance access to the latest Public Domain and User-Supported software programmes before its release to the public! plus having 24 hours, 7 days hot line to order from! Membership in the NETWORK is \$39 annually! So, may we say.. WELCOME to the world of FREE-SOFT.

0125 PC-PROFESSOR — Your computer will teach you all about BASIC programming in colour!

0180 PC-TUTOR — Tutor will teach you all what you need to know about Your PC and its DOS!

1000 PC-WRITE+ — Super word processor, comes in 2 diskettes, this is part 1, full-featured package with 55000 word dictionary in colour, even support a Laser printer.

1001 PC-WRITE+ — Part 2 as above.

0054 SIDE-WRITER — It will allow your printer to print SIDEWAYS on paper! a must for lotus users!

0051 EZ-FORMS — allows you to generate master forms tailored to your need. Super for business.

0028 PC-MUSICIAN — Great programme, you can create and play songs on your PC!

1003 PC-FILE+ — Just when you thought PC-FILE couldn't get any better File+ create new standard in Database managers, comes in 2 diskettes, this is part 1, it is easier, faster and more... more powerful.

1004 PC-FILE+ — Part 2 as above.

0130 PERSONAL FINANCE

MANAGER — Good personal accounting system. You can keep track of all household money matters from Cheque account to Investments.

0148 PC-TOUCH — Your Computer will be your typing tutor, let you go at your own pace and keep track of how well you are doing.

0147 SLIDE — Images can be created, edited, saved, displayed and printed using the programme. Handy for Desktop Publisher.

0172 THE LIBRARY for lotus — 20

Super worksheets for lotus 123, from Cheque Book balancer. Cash Flow Manager to New Venture Budget!

0197 HARD DISK UTILITIES — Super collection of Hard disk Utilities from a utility tells you which files have not been backed up to the one helps you create sub-directory no one knows about but you!

0174 KID'S WORD PROCESSOR — Excellent word processor written for Children (and adult too!) in super colour and sound, features graphic menus and the lot!

0175 PC-DRAW # 1 — A must as a part of your Desktop Publishing Library, it is a combination of programmes, providing keyboard, screen drawing, graphics printing and slide show capability.

0176 PC-DRAW # 2 — A selection of drawings and pictures made by PC-Draw #1, plus a super slide show, you must have PC-DRAW #1 to be able to use it.

0201 PROCOMM — The professional communications programme, if you have a Modem then you need Procomm.

0046 PTROOPER — A game, in Super Colour, keep the invading paratroopers from landing in your country!

0049 PC-CHESS — Very good Chess game, you can play against the computer or a friend!

0065 AFGHAN-WAR — Good WAR GAME, in colour based on Afghanistan War.

0157 LANDER — In excellent graphics and colour, can you land a space ship on a pad without crashing?

0165 SPACEWAR — Arcade game in colour and graphics, combines the best features of Asteroids and Startrek with a few tricks of its own!

CHECKOUT

performance benefit since the elapsed time to access the data is likely to be approximately the same and DOS is unable to utilise the processor savings. With OS/2, however, the situation is completely different. While one application is held waiting for its data to be processed by the master device, OS/2 will be able to schedule other activities and so fully utilise the processor time which is made available by the use of the intelligent master.

We are accustomed to and familiar with changes which improve the performance of our PC-DOS systems, such as when we upgrade the clock speed from 4.77MHz to 8MHz, or change from an 8088 to 80286 processor, or move from a floppy disk to a hard disk. Such changes speed up each individual activity noticeably. With OS/2 and MCA, however, we will have to become accustomed to changes which increase the overall power of our systems but which will not necessarily make any single activity operate any faster. One of the main benefits of MCA is that it gives IBM and other suppliers a platform on which such total system improvements can be built.

It is possible that at some point in the future the database and comms manager services for IBM's OS/2 extended edition will be offered by separate masters which have been optimised to provide the required high-performance service with minimum impact on the main system processor.

Conclusion

IBM has always stated that its reason for changing to MCA was to support fully and exploit a multi-tasking system such as OS/2. We have seen how MCA provides support for simultaneous transfers over the interface, and this is paralleled within OS/2 by the advanced BIOS also providing support for such concurrent activity. The availability of intelligent masters on the MCA interface further enhances the ability of the complete system to deliver a significant increase in total power when OS/2 is being used.

The design of the Micro Channel enables the PS/2 systems to be inherently more reliable than the previous PCs or ATs, even in complex environments with a multi-tasking operating system such as OS/2. The support for multiple masters lays the groundwork for providing powerful systems in which the major subsystems can be partitioned to operate in separate processors communicating over the Micro Channel. It is obvious that what IBM has currently announced is only the tip of a very large iceberg.

52 Claremont Street, South Yarra, 3141

Prices correct at time of printing but subject to change without notice.

How all these countries have helped a small Australian company lower the local prices on some of the best modems in the world.

Now, the largest modem manufacturer in Australia has good news for local users.

NetComm became number one simply by constantly achieving the impossible, and by constantly producing the better modem.

NetComm's domestic success has now been reproduced overseas, where NetComm has successfully exported Australian technology into some of the world's most

competitive markets. This achievement of local and overseas success has meant vastly increased production of most of its products – which in turn has brought about **lower unit costs** – savings which we can now pass on to you.

NetComm's lower prices apply to just about all of their huge modem range. And they apply right now.

So why go past NetComm, when you can now have the best, for less.

HP DeskJet

Hewlett-Packard's DeskJet ink-jet printer provides laser-quality lettering and simple graphics at an affordable price for the small-business user. Derek Cohen was impressed by the performance of this machine, which is due for release next month.

With the increasing interest in graphics and desktop publishing, many computer users are looking disparagingly at their dot matrix printers and lusting after the sort of quality output that laser printers offer. For most users, however, laser printers are far beyond their means.

In addition, while many 24-pin printers offer good-quality text and graphics output, they are limited in typefaces and are often not supported by more sophisticated applications.

It is frustrating, for example, to find that Xerox Ventura Publisher will sup-

port 9-pin dot matrix printers, and laser printers, but not 24-pin devices which for many would provide adequate originals.

The final problem is that of printer drivers. Most software applications now support laser printers, and it has been

obvious for quite some time that there was room for a low-cost, non-laser printer that recognised, for example, the HP LaserJet set of instructions.

Hewlett-Packard has now filled this breach with its DeskJet, which will retail for around \$2000. The unit is HP LaserJet compatible, is based on ink-jet technology, and produces text and graphics of a quality comparable with laser printers. It uses ordinary bond paper, and font cartridges give access to typefaces up to 18pt in size with italics and bold available.

If things were so simple, however, the laser market would collapse overnight, and as we will see, price does have its penalties.

Hardware

Having narrowly avoided slipping a few discs moving a bunch of newly-delivered laser printers around the office last month, it is gratifying to find the DeskJet a small, lightweight box. Dimensions are 37cms deep by 44cms wide by 20cms high — about half the size of a standard laser printer. And at just over 6kgs, it is about one-third the weight. Compactness is an integral part of the design, with the 'in' and 'out' paper trays lying on top of each other and forming part of the unit's 37cm depth.

Both serial and parallel interfaces are provided as standard and these, together with the power input, are

recessed in the middle of the bottom plate of the printer. This means that the printer can be situated almost flush against a wall or partition.

The ink-jet printing mechanism consists of a removable cartridge containing both the two rows of 30 ink nozzles forming the print head, the ink-jet electronics and the ink reservoir. One head-cartridge should last about 500 sheets, depending on the balance of text to graphics and the quantity of heavy black areas of graphics. Hewlett-Packard works to a guide of 525,000 characters or double that in draft mode. Replacement cartridges will cost around \$30. This works out at around 5.5c per copy. In terms of consumable costs this is comparable to many laser printers. However, 'typical laser printers' cost upwards of \$3000. At the other end of the quality scale, 5.5c per copy is considerably more expensive than the cost of ribbons for a standard impact printer.

Next to the paper trays are two slots which take font cartridges, two sets of buttons and a series of LEDs. The font cartridges are different from the standard HP LaserJet cartridges because the format in which the fonts are held is different. As we will see later, this also means that standard HP downloadable fonts cannot be used.

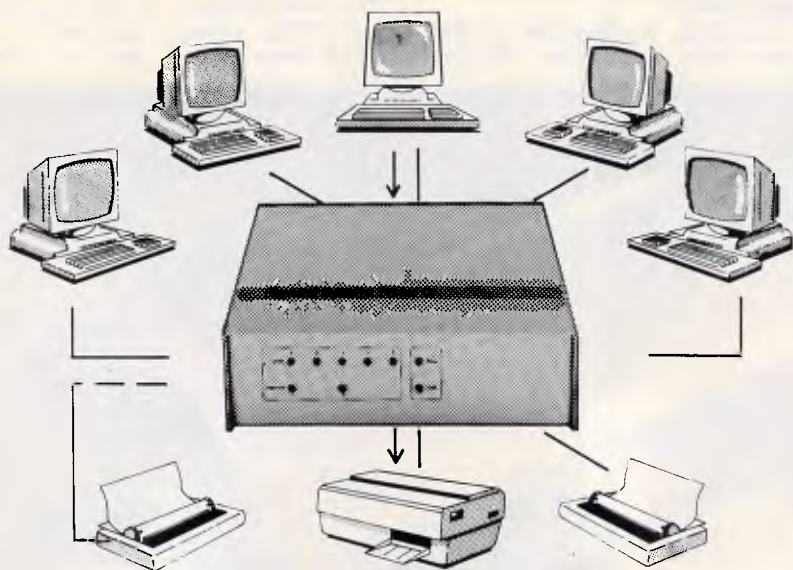

The machine as standard comes with Courier as a built-in font and all other fonts must be purchased separately on cartridges.

The top of each cartridge shows the name and point sizes of the fonts it contains. Alongside each combination is an LED which glows when that particular font is in use. Fonts can be selected either by software, or manually using the buttons, and in either case the LEDs glow on and off as the fonts are selected.

The review machine was supplied with three cartridges. One each for Helvetica and Times Roman, and a demonstration cartridge which prints a sample text and graphics page on power-up. Font cartridges will cost between \$80 and \$200 and an Epson emulation cartridge will also be available.

Each of the supplied cartridges provided 8pt and 10pt text in Roman (upright) and italic fonts. Compression from the standard 10cpi to 16.67 and 20cpi, expansion to 5cpi and bold effects are performed 'algorithmically'. This means that the faces are calculated rather than stored, and the results can look pretty grim. Bold is achieved by doubling the number of dots per character and you soon realise why people like Adobe make a fuss about people buying proper fonts. I found the Helvetica bold

QUEUE THE DATA NOT YOUR COMPUTERS

If sharing printers is a headache, you need a PRINTER Qr.

The Printer Qr is a fully featured Buffer, Queuer, Switch.

It means no more hassles unplugging cables, operating switches or waiting for printers.

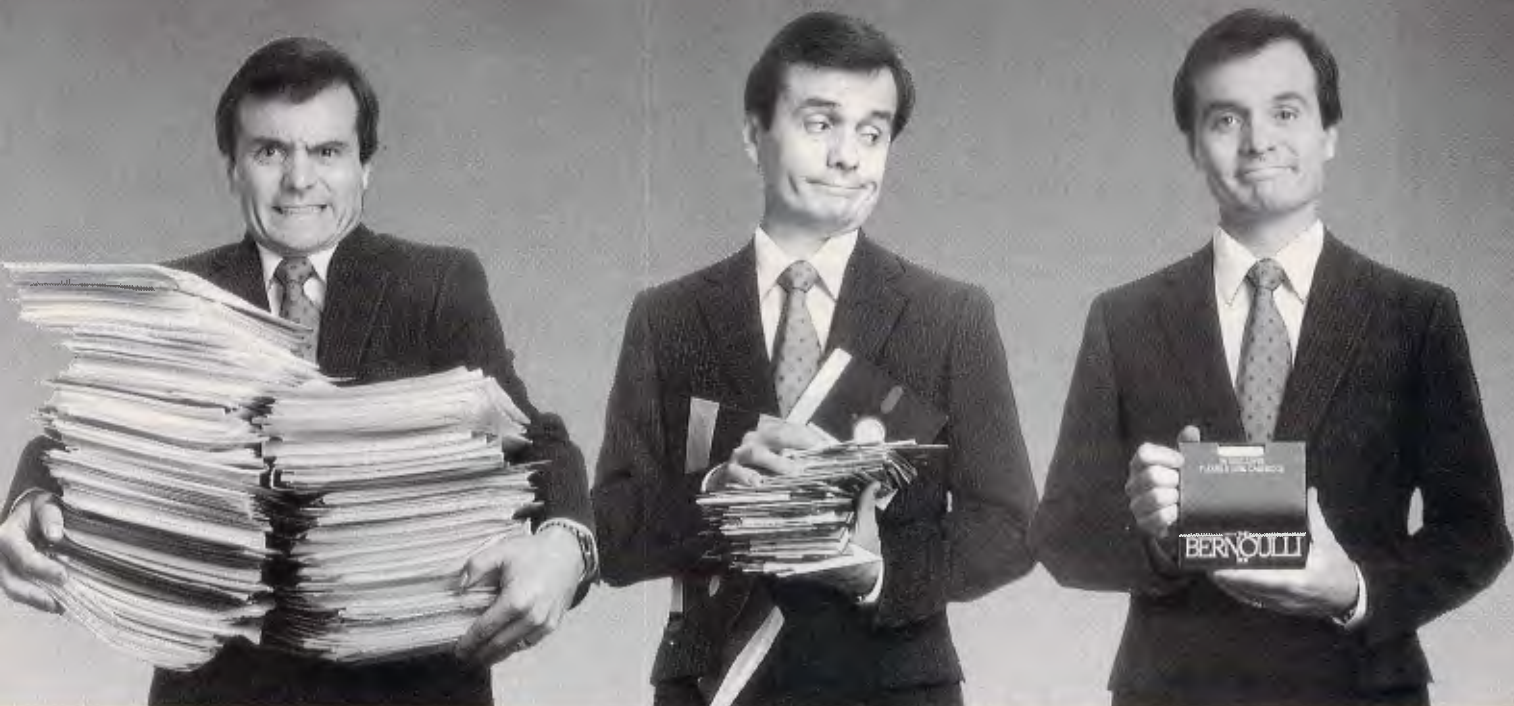

The Printer Qr is easy to use, directing work automatically to a particular printer as well as giving you complete control using software commands.

- 2 year guarantee

- Large buffer memory - dynamic allocation
- High speed inputs - all can be active simultaneously
- Sophisticated character compression techniques: eg. a 750K desktop graphics file used only 120K buffer space
- User friendly MEMORY RESIDENT software makes command usage a breeze

WE DIDN'T INVENT REMOVABLE MASS STORAGE. WE SIMPLY PERFECTED IT.

First came piles of documents and bulging filing cabinets. Then, tape drives and floppy disks. Now, the Bernoulli Box® — the perfect solution to manage, store and share your ever expanding flow of data.

With 20 Megabyte removable disk cartridges — in single and dual drive, 5¼" or 8" systems — you have the best of hard disk performance and unlimited secure data storage. No wonder the Bernoulli Box is the standard for more than 150,000 users.

Never runs out of storage

Because Bernoulli™ uses removable 20 Mbyte cartridges, there is no limit to your data storage.

For another 20 Mbytes or even 500 Mbytes, just add more low cost Bernoulli cartridges.

Fast access, fast backup

Transfer your data at hard disk speed. And preserve that data on true "working copies"; no need to "restore" data to use it. Backup tasks that would take stacks of floppies are

copied easily on one 20 Mbyte cartridge in as little as 2 minutes.

Easy to protect, easy to share

Your data is truly secure when you lock cartridges away in your safe or desk. And to share your data, just carry a compact Bernoulli cartridge down the hall or drop it in the post. Try that with your PC's hard disk!

The long term, low cost investment

We've designed Bernoulli Boxes to work with any IBM® PC, from the original to the PS/2 80™ IBM compatibles and the Apple® Macintosh™, so Bernoulli is an investment you won't outgrow. As you expand your data, just add more low cost cartridges, for a lower cost per megabyte.

Every reason for PC World Magazine to name the Bernoulli Box a "World Class Product" in 1985, 1986 and 1987.

So, check the Bernoulli Box range now. Just call Sourceware (02) 411 5711 for more information.

OMEGA®

Number 1 in removable data storage.*

far less objectionable than the Times or Courier bold.

Other buttons place the printer on and off-line, perform a form feed, change between letter-quality and draft mode, and allow for the hand-feeding of envelopes. In draft mode the DeskJet only prints every other dot, which saves ink and cuts printing time by about one third. For people who want to have fine control over the paper position before printing, two buttons produce micro feed movements of the paper.

The paper tray can hold up to 100 sheets of paper up to US legal size. An adjustable gripper holds the narrow edge of the paper in place while a lever adjusts a side bar to accommodate A4 or wider paper. The output tray holds only 25 sheets and each printed page is suspended by two bars above its predecessors for a few seconds, to allow the ink to dry before it is released onto the stack. HP recommends that standard bond paper is used, and on test I found no difficulty using ordinary photocopier paper or laid Conqueror, which has a surface texture that rubs against the head and smears the ink on some ink-jet printers.

Pages are stacked face up in the output tray which means that a multi-page document is stacked in the wrong order.

Software compatibility

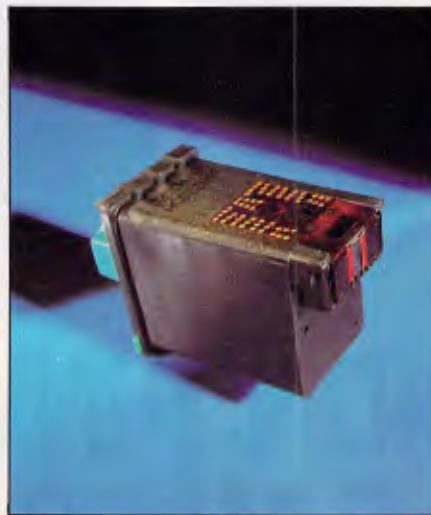

The DeskJet is compatible with the original HP LaserJet printer. This compatibility is referred to as PCL III+. Current LaserJet Series II printers use PCL IV. It is important to understand the differences in order to realise why 'HP compatibility' is not a single standard. PCL III+ supports fonts up to a maximum of 18pt (about twice the height of a standard printer output) whereas PCL IV goes up to 48pt. Both offer up to 300 x 300 dpi resolution in text and graphics.

The HP control language is totally different from that used for Epson or IBM emulations. Instead of the computer saying 'now use font 3', the HP language is more like a bargaining statement — 'I'd like a bold serif face in 24pt with the international character set, what have you got? I'd prefer Century if you have it'. If the printer can't match the request exactly it provides the next best thing. So, you may get Times Roman in 18pt US-ASCII only. The very long strings of escape sequences to make such requests are frightening to say the least, so it is good that the DeskJet will work, as a default, with the LaserJet drivers provided with most software these days.

However, there are two major cautions.

The DeskJet does not have any internal memory in which to assemble a page. In this respect it is closer to a serially-printing dot matrix or daisywheel printer — it processes one line of data at a time rather than accepting a page at a time like a laser printer with its 1Mbyte of RAM.

To give an example, consider a tinted

The removable print head also contains the ink reservoir. The large gold plate is the electrical contact, the small one underneath contains the ink nozzles

box containing text. On a page printer, a virtual page is made up in RAM. The software in the computer will send the printer a series of instructions such as 'draw a box at these coordinates, fill it with a tint, now move to the top corner and write this text in this preferred font which I have just downloaded'. The printer assembles the components and then prints the page.

On a serially-driven printer (serially as in data not interface), there is nowhere to make up this page and the printer has to 'lay down' the data as it arrives. It needs some trial and error to discover whether the LaserJet printer driver provided for a given piece of software sends its data serially or to a virtual page. GEM Output works fine, but GEM-derived Ventura does not.

In the long term, Hewlett-Packard expects that DeskJet drivers will be available for all major software packages. In the short term, the company recommends using a LaserJet or LaserJet+ driver if no DeskJet one is available. I was provided with a DeskJet driver for Microsoft Windows which worked perfectly.

The other major difference is that the DeskJet will not accept standard HP downloadable fonts. Partly this is be-

cause the standard machine does not have the memory to store them. The other reason is that the DeskJet stores the bit-map for its fonts in a vertical pattern (that is, it reads one vertical line of dots at a time) rather than horizontally as with standard HP fonts. In addition, the DeskJet's basic 'dot' is round whereas that of a laser printer is oval.

Nonetheless, Hewlett-Packard will be supplying a memory cartridge to accept special downloadable fonts. And no doubt some enterprising hacker will write a utility to convert LaserJet fonts to DeskJet ones.

Performance

The DeskJet was run with a number of software packages. Apart from those running under Windows, all were configured for a standard HP LaserJet+. In operation the machine is almost silent and presents none of the environmental problems of smell, noise or bulk of a laser printer.

It is obvious, looking at any of the print samples, that the output quality of the DeskJet is very close to that of a laser printer. In fact, when printing solid black areas and tints in graphics mode, the DeskJet showed less streaking than a laser printer. In text mode the results are very impressive, with only occasional slight spidering revealing that a wet process has produced the text.

Using PC-Write, I selected the LaserJet+ printer driver with what was referred to as 'Soft R8 new Helv-AD' fonts. This set includes a 24pt Helvetica not contained on the cartridge, but the standard, bold and italic fonts reproduced correctly. I tried various other font cartridge drivers and most produced satisfactory results for some of the font letters.

Fontasy also reproduced its fancy text and graphics correctly, showing that this package sends its graphics data serially rather than as page commands. The HP fonts available for Fontasy printed out correctly, though again, these are transmitted as graphics streams.

Pictures were printed from GEM packages Draw and Davrelle, using the standard LaserJet+ driver. These printed perfectly with the grey tints actually printing finer than on a Kyocera 1200 laser printer. The LaserJet+ driver for GEM sends lines only one bit high to the printer which makes for very slow printing. The DeskJet can handle lines 12 dots high and, when a GEM driver becomes available, printing will be speeded up considerably.

Though it is possible to print from GEM, it is not possible to drive the Desk-

TIPS & TECHNIQUES

With the increasing interest in graphics and desktop publishing, many computer users are looking disparagingly at their dot-matrix printers and lusting after the sort of quality output that laser printers offer. For most, however, laser printers are

with laser printers. It uses ordinary bond paper and font cartridges give access to typefaces up to 18pt in size with italics and bold available. If things were so simple, however, the laser market would collapse overnight, and as we will

Graphics and solids reproduce quite well when the DeskJet driver is used with Windows. The Times typeface leaves something to be desired, though

Jet from Ventura Publisher at present. This is because Ventura sends the printer numerous positioning commands which cannot be acted upon. Hewlett-Packard is currently in the process of writing a Ventura driver.

Using the supplied driver for Microsoft Windows I printed out a page from PageMaker. The sample above shows how well it can produce text and graphics, but how uneven the tinted area is. The Type menu only allows access to fonts on the installed cartridges.

Conclusion

If the DeskJet's print quality is as good as I have made out, what are the drawbacks?

The main one is speed. A typical laser printer will output text pages at anything between six and 12 pages per minute. The DeskJet is rated at two pages per minute. When printing graphics, you do have to sit and wait while the head draws each line separately.

However, for many users speed is not a problem; and the ability to output at laser quality without the capital cost of that type of machine will be a great advantage. The consumables cost is also on the high side, but I found it reassuring rather than wasteful that every 500 sheets or so I was getting a new, clean set of ink jets.

As an ink-jet printer, performance is very good. The quality of output and software compatibility ranks the printer well ahead of other ink-jet printers and at a cost below many less capable machines.

The DeskJet is clearly aimed at the small-business or discerning personal user who wants laser-quality lettering and simple graphics without the capital cost. So far these users have been buying 24-pin printers as a compromise between quality and cost.

The printer is not aimed at the heavyweight desktop publishing market, though it will work with PageMaker. It will certainly appeal to those using either low-end DTP packages or the new breed of 'graphics with text' word processors such as MicroPro's Pagesetter or WordPerfect 5.

Given Hewlett-Packard's position in the laser printer standards market, it is likely that DeskJet drivers will start appearing on most printer menus in the near future.

Overall, the printer and the quality of its output impressed everyone who saw it in action, and I'd certainly recommend anyone thinking of buying either a 24-pin printer or a laser printer to consider whether the DeskJet is more suited to their needs.

YOU'VE USED
OUR PRODUCTS, IT'S TIME
YOU KNEW OUR
NAME

If you've ever used an IBM compatible computer, you may well have used a product made by Mitac. So how come you've never heard of Mitac? Because, since the beginning, almost everything we produced had someone else's name on it. For over 14 years, Mitac has been doing a roaring business designing, producing, testing, and re-testing high-quality computer products — and quietly putting our customers' well-known logos on them.

More recently, we have also been developing and marketing computers with the same quality on the inside and the Mitac logo on the outside.

To learn more about the unique products we offer, contact your local Mitac dealer.

VISIT US AT THE MELBOURNE PC EXPO '88

XT is a trademark of International Business Machines Inc.

The Heavies are Coming

If you thought investing in computer shows is becoming a waste of money, you are probably right. Until now. The Australian Computer Exhibition which will be held in September at Darling Harbour will change your mind.

Based on research into what the computer industry is asking for, it is the only exhibition that will put you in direct contact with your major potential customers. Only the heavyweights — the brand specifiers and volume buyers that you've been wanting to meet.

And that's only the start. To see how little it costs to be an exhibitor at the computer event of the year, call our exhibition director, Fleur Michael now on **(02) 264 5337**.

Presented in conjunction with the Australian Computer Conference by ACP Exhibitions, a division of Consolidated Press Holdings Limited.

How to stop software becoming hard

If you thought a menu was something to do with soup of the day, or that a floppy disk was a record that didn't make the top ten, Sage has just the thing for you.

Sage, the leaders in low cost, high quality business software, now introduces the **PC Learning range**. A unique set of seven self-teach programs which strip away the jargon and make the basics of business computing seem as familiar as the office typewriter.

Together with the best-selling **Sage Business Wise** software range, they provide further irresistible reasons for choosing Sage to run on your Amstrad or IBM PC and their compatibles.

Easy to learn for first time users;
Easy to move on to more advanced programs;

Easy to train and re-train staff in-house;
Easy to secure a quick return on your investment and boost office productivity.

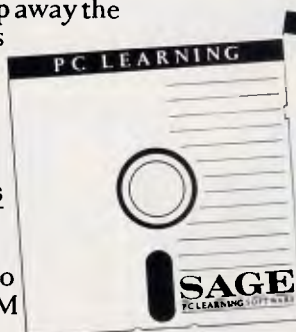

Master the basics then move up to the **Sage Business Wise** range, the leading range of low cost business software. It covers all your needs from accounting and business planning to word processing and

communications.

Unbeatable value for money - **Sage Business Wise** programs are backed by 90 days **FREE** technical support.

So don't let software be hard any longer. Ask for Sage software at any leading

computer retailer, or post the coupon for full details.

Serving the System

The long-term use of the SQL programming language on mainframe database systems has prompted its acceptance in the micro field — not least by IBM and Microsoft in OS/2. Kathy Lang assesses its importance at all levels of computing power.

Many PC users already know how hard it is to transfer themselves or their data from one package to another. Many word processors initially adopted their own file formats so that most text files were far from plain, but contained scatterings of control codes and other formatting information. In the database and spreadsheet worlds there have also been few attempts to standardise on particular files or interfaces, and most moves have come from manufacturers with vested interests.

For users of databases, file incompatibility can have more serious consequences than in other fields because the information structures and the programs which handle them tend to be more complex. With no standard method of storing information in a database, there can be no standard method for inputting or extracting information from a file.

On larger systems, where many different applications may be trying to access the same information, the problem is much worse. One step towards solving it on large systems has been the creation of centralised databases, with generally agreed data structures being supervised by a database administrator.

In order for this to work, the data structures have to be appropriate for a wide range of applications which must be written in such a way that data is not duplicated. The history of these developments is covered in the accompanying box, and they have now reached the point where there is a defined standard

Requester/Server Architecture

DataToolset

- Application Development
- User Interface
- Ad Hoc Query
- Operations & DB Administration

DataServer

- SQL Query Processing
- Security
- Transaction Management
- Rules for Legal Updates
- Active Data Dictionary
- Recovery

Any suitably-configured application can act as a front-end to the SQL data server, which acts in the same way as a network file server except that the whole of the server is dedicated to one database

RDBMS Architectures

TRADITIONAL

DBMS Process per User

Single-Threaded

SYBASE

Multi-Threaded

- OS < 10%
- 50 Users per MB

Three approaches to multi-user access: one process per user; the data server running a single task and users queuing for access; and many users at different points in the same re-entrant data server routine

Take Charge! ^{T.M.}

LIKE NOTHING IN RECENT MEMORY

"features not often found . . . packed desktop organiser . . . value priced . . . less than half the memory of Sidekick Plus . . . lets you take charge of your PC"
Jonathan Matzkin
PC Magazine

Limited introductory offer

\$199

plus sales tax where applicable
Excluding postage and packing

One integrated disk program does what all these do. In only 23K of RAM!

Take Charge! is a new breed of software that won't conflict with large programs like Ventura, Harvard Graphics, Paradox or Ability. Don't sacrifice valuable memory, Take Charge!

Take Charge includes: File Manager (Copy, Delete, View, Print etc.), an Appointment Book/Calendar, a Rolodex-type card file system (with autodialler, labelmaker, virtual memory text editor (which lets you edit 10 files at once), ASCII table, alarm package/clock, sophisticated RPN calculators, (financial, scientific, computer science, statistical, tape), printer redirect, speed key, cut/paste, clipboard, notepad, screen save, security keyboard lock, system reset, DOS command line editor, hex editor, directory editor, disk optimizer, directory sort, tree directory, file locator, undelete, format recover and more.

Call now. Bankcard & Visa accepted

- Only 23K Memory Resident
- Easy to Learn and Use
- Point and Shoot
- No program conflicts
- Powerful File/Systems Services
- Powerful Utilities/Disk Services
- No technical skills required
- Allows creation of unlimited menus
- Menu-driven

System Requirements: IBM PC, XT, AT, PS/2 or compatible. Hard disk required. MS/DOS 2.0 or greater. 320K RAM minimum.

for specifying both data structures and the way they can be interrogated.

Data protection

Even on single-user systems, there is an obvious need to check the accuracy and internal consistency of data. For example, you should not be able to create an invoice for a customer who does not appear in your customer file. If you design, build and use your own systems, you may look after this yourself, but where a system is built by one person or group and used by another, formal checks on data integrity should be built in.

And, users must be prevented from circumventing the checking by updating the database directly. The more people use the system, the more important this becomes.

Again, all the major packages, and the compilers for programs such as dBASE III, have facilities to allow you to build in such checks, but few make it easy. If several applications can update the same database, all must include their own error-checking (though some programs help in this by allowing the use of a shared library of subroutines). Such checking can sometimes involve significant overheads, both in system performance and in programming.

For example, where several files are being updated in sequence, it is possible that an error in user input will not be discovered until the last update is tried. Then all the preceding changes must be 'undone', repeating all the file access in reverse order. And if the system should hang in the middle of either phase, good luck!

That last example highlights one of the most error-prone aspects of PCs: what happens to your data if your system crashes, or someone pulls the power plug before data has been saved properly and files closed?

And how does the system cope if a task goes berserk and steps over the border into an area of memory being used by another task running on the same processor? Some of these problems, notably the problems of multi-tasking, require operating system facilities not yet available but promised, for IBM PC systems, in the full version of OS/2.

To facilitate some sort of standardisation among databases, many manufacturers are adopting SQL (Standard Query Language) as their interface. SQL has been used on mainframe databases for some time, and with the growing interest in micro/mainframe connectivity, it makes sense for micro

database publishers to also adopt SQL as their standard. This move was reinforced last year by the decision of IBM and Microsoft to support the language as a part of OS/2.

SQL may seem just another programming language like dBASE. But, its existing acceptance within many parts of the computer industry, and the fact that it is not linked to any proprietary product, will mean that increasing numbers of database manufacturers at all levels of computing power will include SQL support in their packages.

In this review I will look at some database situations and discuss why a standard like SQL is necessary. I will also give some examples of SQL in operation, though thankfully, it can be implemented as a 'black box' with users being shielded by existing friendly front-end applications from the nitty-gritty of raw code.

Batch facilities

In systems which take instructions entirely interactively, using menus and question-and-answer, it is difficult to provide a simple way to automate repetitive tasks. Some systems try to do so by allowing the recording of a sequence of keystrokes; others by using equivalents for keyboard characters which can be stored in a file and edited. But such systems are notoriously difficult to use. And, for systems which make heavy use of the mouse without providing keyboard equivalents for all operations, they are virtually impossible to implement.

The alternative approach, used by most powerful database systems, is to use commands, either as an alternative or as a substitute for menus. This may allow, as it does in dBASE, the option of using commands interactively; it will certainly permit storage of a batch of com-

Landmarks in the SQL story

(SQL is officially pronounced by its initials, as Ess-Queue-El, but it is almost universally known as Sequel.)

1970: EF Codd, at that time working at the IBM Research Laboratory, published his now classic paper on the relational model for large databases. This paper laid the foundation for all subsequent work on developing the relational model, from which stemmed the implementation work needed to produce workable relational systems, including relational languages.

1974: Creation of the relational language, Structured English Query Language, by DD Chamberlin and others at the laboratory. This language formed the basis of the first IBM prototype system, SEQUEL-XRM, in 1974-5.

1976-77: Revised version, called SEQUEL/2, developed; a large subset of this language, subsequently renamed SQL for legal reasons, was implemented by IBM as System R. This became operational in 1977, and was subsequently installed on a joint study basis at a number of customer sites, as well as undergoing trials within IBM itself.

1981: First commercial version of SQL announced by IBM for its mainframe operating system DOS/VSE, followed by a version for MVS called DB2, the major SQL product now supplied by IBM. The long gap between tests beginning on System R and the release of a viable product allowed other vendors to develop SQL implementations, and that from the company which is now Oracle Corporation preceded IBM in the market.

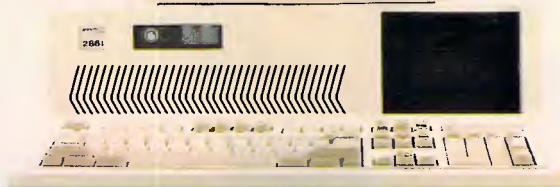

1982-88: Many other implementations of SQL were launched, either as standalone products (including Sybase — see under 'The Ashton-Tate/Microsoft SQL server'), or as interfaces to existing products such as Ingres. On micros, the command language used in the Open Access database module is based on SQL, while dBASE IV promises an SQL implementation alongside the current dBASE command language.

1986: The importance of SQL in the market as a whole was recognised by the ratification of an ANSI standard for SQL. The initial standard was essentially the IBM dialect of SQL, and has been criticised for leaning too much towards protecting existing vendors' implementations and not being sufficiently concerned with the need for a solid foundation based on formal language principles. Substantial revisions of the standard have been proposed.

THE ADVANTAGE

ENHANCED

Kaypro Corporation — electronics innovator since 1952 — has made a good thing even better. The KAYPRO 286i Model C now features a 40-MB hard drive and the 101-key AT-style keyboard. With the latest standard feature enhancements, the KAYPRO 286i is the smartest choice in advanced computer technology.

Advanced.

The heart of the KAYPRO 286i is the 80286 microprocessor — with a processing rate of 10 MHz and 640 kilobytes of RAM. The perfect match for today's high productivity software.

And Enhanced.

The KAYPRO 286i Model C has

a 1.2-MB floppy disk drive, plus a hard disk with 40 MB of storage. The KAYPRO 286i AT-style keyboard features the new 101-key layout with separate cursor control, numeric keypad, and 12 programmable function keys.

Perhaps the nicest surprise about the KAYPRO 286i/C is the suggested retail price of \$4895

** Prices are subject to variation*

You won't find distinctive metal construction, 10-MHz processing, and free name-brand software that includes WordStar Professional Release 4 in any other AT-type computer.

Other company's extras are Kaypro standard features.

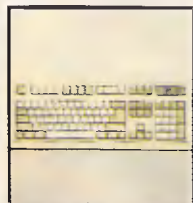

The KAYPRO 286i Model C features...

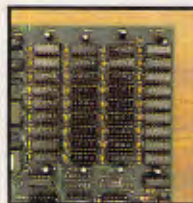

**80286, 10-MHz
Microprocessor.**

**An internal hard
disk drive with 40 MB
of storage.**

**Enhanced 101-key
IBM PC/AT-style
keyboard with

OVER 450,000 UNITS INSTALLED WORLD WIDE

Amicron-No.1 Dealer for NEC- the No.1 selling PC.*

Powermate Portable POWER AND PORTABILITY Is this the ultimate portable?

The latest release of the Powermate family provides Portability without the need to compromise Performance. With a 80286 processor, running at 8 or 10 MHz, backlit electo-luminescent LCD and high capacity 40Mb hard disc drive, this portable is positioned to run a wide range of operating systems and applications required for today's business market.

POWERMATE 386 CAD/CAM

The power of the 80386 processor in the NEC Powermate series produces unrivalled capacity for data processing.

Combined with a large capacity hard disc, the Powermate 386 is ideal for CAD/CAM, desktop publishing, scientific applications or as the ultimate fileserver for a local area network.

Why Amicron

Amicron is a \$20 million Australian company that since 1977, has been serving some of Australia's leading corporations and large government departments. Our clients range from the biggest to the smallest.

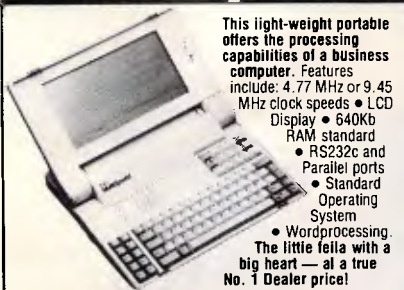

We have been No. 1 dealer since 1983 — making Amicron NEC's longest standing top dealer — WORLDWIDE!

To stay No. 1 we offer consistently excellent prices, unparalleled service, support and training.

When it comes to NEC, come to Amicron. We're No. 1.

*Source/Compass Research

MultiSpeed

This light-weight portable offers the processing capabilities of a business computer. Features include: 4.77 MHz or 9.45 MHz clock speeds • LCD Display • 640Kb RAM standard • RS232c and Parallel ports • Standard Operating System • Wordprocessing. The little fella with a big heart — at a true No. 1 Dealer price!

DESKTOP PUBLISHING

Get the most out of your Desktop Publishing requirements with Powermate. Page layout has never been easier. Team

Powermate with an NEC Silentwriter for professional results every time. Talk to Amicron.

DATABASES

mands in a file to be run regularly. It also opens up the possibility, as has been done with many systems, of adding commands which are only appropriate in a batch setting, or where interaction is permitted only indirectly, thus developing a programming language specifically for database handling.

Standards exist for conventional programming languages such as Basic, Fortran, C, Cobol and so on. In the micro world, as I have mentioned, there are no standards yet for database languages. And while many language standards are more honoured in the breach than the observance, at least they offer a minimum to which all conform. The desirability of a standard is one of the reasons for the continuing popularity of dBASE products through periods when competitors have provided demonstrably better facilities more cheaply — most people being of the opinion that an ad hoc standard is better than none, and a widely-accepted ad hoc standard is better than an unpopular pukka standard.

There is, then, a certain irony in Ashton-Tate being the first supplier of database systems for PCs to recognise the desirability of an external standard for command languages. The reason is

the popularity of the chosen language, SQL, on larger systems, which means that many dBASE users and potential users are asking to have the same language available across all their database systems.

The use of a standard command language also opens up the possibility of

'For users of databases, file incompatibility can have more serious consequences than in other fields ...'

simple inter-program communications. For example, a series of changes made to a database on a micro, using one database program, could be propagated on a mainframe using another database program simply by means of a task initiated on the micro, communicated to the mainframe and executed there, all without user intervention.

So, there are three main areas in which we might hope to see significant improvements in database systems soon,

and where SQL and its implementations might help: a standard language interface for interactive and batch use and for inter-program communication; improved data protection, by separating integrity checking and failure precautions; and the efficiency of access to databases on multi-user systems.

The first of these should come from implementing SQL itself. The other two depend on software developments which, in their turn, rely on the use of an agreed standard for accessing databases, so that many applications can work together harmoniously. One example of such a development, the SQL server announced jointly in January by Ashton-Tate and Microsoft, is explored here. There will doubtless be others, but the pedigree of this system, and its backing from the leading DBMS supplier and the operating system vendor, makes it likely to be of extreme importance on IBM PC and PS/2 systems.

What is SQL?

SQL is a language for the manipulation of relational databases. Any language sufficiently powerful to need an ANSI standard is far too complex to be

described fully in a few paragraphs, but some idea of the language and its facilities can be given.

Assuming a single table of suppliers, each with an identifying code and a column recording their city of origin, a simple SQL statement, intended for interactive execution might look like this:

```
SELECT S.CITY FROM S WHERE
S.SNO="S4"
```

This would result in the display of the city in which supplier S4 is located. The prefix S before each column name is the name of the table; this is optional where no ambiguity about the source of the data is possible.

SQL includes a set of commands for the creation of tables, the insertion, amendment and deletion of rows, and the selection of data using one or more sets of criteria. Further control is exercised by adding more parameters: for example, sorting is accomplished by adding the parameter 'ORDER' to the 'SELECT' command, while 'DISTINCT' inhibits the display of rows which would duplicate those already displayed. Some built-in functions are provided to allow, for example, totalling of a numeric value across the range of rows valid for the SELECT command. A 'JOIN' facility, as befits a relational system, is provided to permit the selection of information from more than one table in a single SELECT command.

Even interactive dBASE is more friendly and less wordy than the rather primitive user image of SQL. SQL is, in many applications, used as a hidden language rather than being displayed to the user in all its gory detail.

Indeed, in its standard specification, it is largely intended to be invoked from within a programming language. The effect is to provide people writing programs in languages like Cobol with a set of database-specific commands to speed up and standardise the handling of database functions. It may well be that ordinary users will never need to know any more about SQL than is covered here; dBASE developers will merely use it to communicate with other programs if they need to, and shield their users from its antediluvian user image.

Given that caveat, SQL could well be the means of providing many features which developers have long sought. The most obvious is the transaction facility, which allows you to define a group of amendments as a single transaction which will only be implemented when the 'COMMIT' instruction is given, and only then if all aspects of the amendment process can be completed successfully.

If problems arise, the program can issue a 'ROLLBACK' command which will cancel all updates putatively made by the transaction.

Security can also be provided through SQL, either to prevent individuals without authorisation viewing a complete table, or to restrict the operations they can perform — for example, to prevent them changing information but allowing them to view it. The basic language also provides some elementary facilities for data checking, such as specifying that a cell must never have a null value.

So far, I've simply referred to 'SQL', but in fact all the implementations are dialects of SQL without one conforming precisely to the standard, and all are different. As with some programming languages, for example, notoriously difficult areas such as input and output commands have been left undefined. While there is a family of programs based on SQL, you cannot rely on them being fully compatible even at the language level. This may give the vendors of PC implementation some headaches when they try to introduce direct communication with mainframe systems — for example, to go and collect information for processing on the PC. Ashton-Tate has already said that this facility will not be implemented in the first version of dBASE IV.

The Ashton-Tate/ Microsoft SQL server

Two of the three advantages we might hope to gain from a standardised database language cannot be gained wholly and directly from SQL, but only from implementations of the language. One of its major advantages is that its design permits the separation of the application from database handling.

For example, where several applications all access the same database, each one could, with the right hardware and SQL software, handle its own interaction with the user, but leave the checking of data integrity to the SQL 'back-end'. This facility is offered by the SQL server recently announced by Ashton-Tate and Microsoft, the fruits of a tie-up with Sybase which has its own complete DBMS based on SQL for the DEC VAX and other mini systems.

The way in which networked applications work at present, contrasted with the way they would interact with the SQL server, is shown in the screentest on the first page of this article.

Separating the functions common to all applications from those specific to each application should result in substantial savings in development time, and also

lead to fewer errors both in program code and in data. Some saving in processing time can also be expected from this rationalisation of application code, but a further significant improvement should be possible because of the way this particular server works. Most current database packages on micros require each user to be running a separate copy of the program (either the full package, or a compiled program).

But in that situation there is no possibility of, for example, intelligent queuing of data requests to speed up overall throughput. Nor is it easy to prevent users — often unwittingly — from making retrieval requests which will lead them and others to sit around waiting for the results. The multi-threading approach used by Sybase shown on the first page of this article should answer these problems, leading to faster response times and much greater capacity on existing physical networks in which one server can be dedicated to database work.

Two types of relationships will be possible between dBASE IV programs and the server. SQL commands can be embedded directly in dBASE IV programs; because there is some syntactic overlap between the two, you will first have to use a 'SET TO' SQL command to show that the following commands are indeed raw SQL. It will also be possible to program using dBASE IV commands which can then be passed directly to the server, undergoing translation to SQL on the way, with the results being translated back into dBASE IV format on the way back.

Conclusion

The relationship between Sybase, and Ashton-Tate and Microsoft, will be interesting to watch. As we have seen, this SQL server allows many different applications — not necessarily written in the same front-end language — to access the database through the same channels. It is certain that other companies will follow Ashton-Tate's lead in offering SQL facilities within existing products, and the agreement makes it clear that the server facilities will be made available to other front-end products.

But Sybase already has a front-end system, called DataToolset, implemented on the DEC VAX and other systems. The company has just announced that a version of DataToolset, fully compatible with its minicomputer implementation, will be produced for OS/2, providing direct competition for dBASE IV.

PERISCOPE™ POWER

...Keeps you going full steam ahead when other debuggers let you down! With four models to pick from, you'll find a Periscope that has just the power you need.

Start with the model that fits your current needs. If you need more horsepower, upgrade for the difference in price plus \$10!

When you move to another Periscope model, don't worry about having a lot to learn... Even when you move to the most powerful model, Periscope III, an extra dozen commands are all that's involved.

A Periscope I user who recently began using Periscope III writes, "I like the fact that within the first half hour of use I was debugging my program instead of learning to use the debugger."

■ **Periscope's software is solid, comprehensive, and flexible.** It helps you debug just about any kind of program you can write... thoroughly and efficiently.

Periscope's the answer for debugging device-drivers, memory-resident, non-DOS, and interrupt-driven programs. Periscope works with any language, and provides source and/or symbol support for programs written in high-level languages and assembler.

■ **Periscope's hardware adds the power to solve the really tough debugging problems.** The break-out switch lets

you break into the system any time. You can track down a bug instantly, or just check what's going on, without having to reboot or power down and back up. That's really useful when your system hangs! The switch is included with Periscope I, Periscope II, and Periscope III.

Periscope I has a board with 56K of write-protected RAM. The Periscope software resides in this memory, safe from run-away programs. DOS memory, where debugger software would normally reside, is

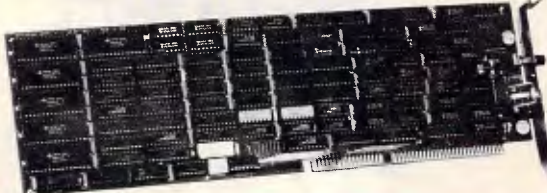

Periscope Break-Out Switch

thus freed up for your program.

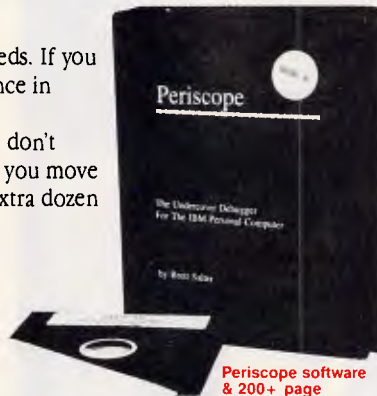

Periscope III has a board with 64K of write-protected RAM, which performs the same function as the Periscope I protected memory. AND...

The Periscope III board adds another powerful dimension to your debugging. Its hardware breakpoints and real-time trace buffer let you track down

bugs that a software-oriented debugger would take too long to find, or can't find at all!

Periscope III Board

Periscope software & 200+ page manual

What Periscope Users Like Best:

"I like the clean, solid design and the crash recovery."

Periscope I user

"I like the ability to break out of (a) locked up system!"

Periscope II user

"I am very impressed with Periscope II-X... it has become my 'heavy duty' debugger of choice, especially if I need to work on a memory resident utility or a device driver."

Periscope II-X user

"Periscope III is the perfect answer to the debugging needs of anyone involved in real-time programming for the PC... The real time trace feature has saved me many hours of heartache already."

Periscope III user

■ **Periscope I** includes a half-length board with 56K of write-protected RAM; break-out switch; software and manual

■ **Periscope II** includes break-out switch; software and manual

■ **Periscope II-X** includes software and manual (no hardware)

■ **Periscope III** includes a full-length board with 64K of write-protected RAM, hardware breakpoints and real-time trace buffer; break-out switch; software and manual.

REQUIREMENTS: IBM PC, XT, AT, or close compatible (Periscope III requires hardware as well as software compatibility); DOS 2.0 or later; 64K available memory; one disk drive; an 80-column monitor.

Call us with your questions. We'll be happy to send you free information or help you decide on the model that best fits your needs.

Real-World RISCs

You can't operate faster than zero wait states — or can you?

It's not important how you play the game; what matters is how you design the playing field. The speed and type of memory in a computer no longer play a big role in determining that system's performance. The configuration of its memory interface has become the key factor.

To achieve maximum benefit from the ultrafast internal CPU architectures of modern microprocessors, it is essential that the external hardware (RAM, ROM, and peripherals) keep the internal CPU execution pipeline supplied with an instruction stream and data flow at the CPU's clock speed. In the case of a 25MHz reduced-instruction-set-computer (RISC) processor like Advanced Micro Devices' Am29000 (see the accompanying box 'The Am29000 Chip Set'), this means making a new 32-bit word available to the CPU every 40 nanoseconds (ns).

Linking CPUs to memory has historically generated a great many techniques. But, as RISC microprocessors usher in another CPU era, the time has come to create still newer designs.

Implementing a conventional zero-wait-state static RAM (SRAM) interface (see Fig 1) at 40ns speeds requires an access time of better than 40 (one clock cycle) — 14 (address delay) — 5 (data-setup time), or 21ns (see Fig 2). Even this number allows for no delay in any address or data interface buffers. Such access speeds are really not practical, especially if the SRAM is part of a cache memory, where control logic and additional buffers may introduce more delays.

So why would a manufacturer produce a processor that cannot operate at full speed with the fastest available RAM? The answer lies in the basic precept of the memory access-speed calculation — conventional memory-design techniques. Although conventional memory technology has served the microcomputer industry well during its first 20 years, a new, more complex technology must be developed to meet the challenge of the 1990s.

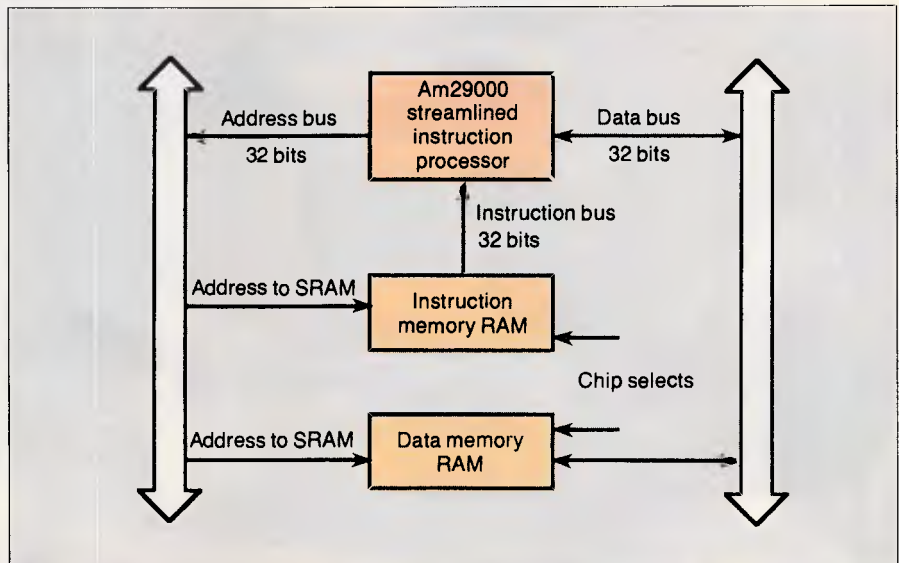

Fig 1 A conventional zero-wait-state SRAM interface design for the Am29000 microprocessor. Notice the separate instruction and data buses with the common address bus

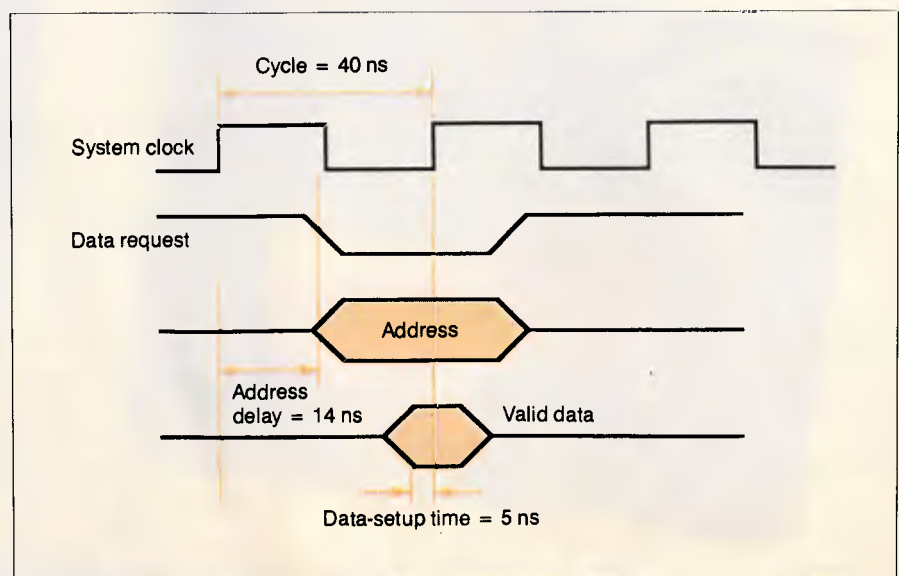

Fig 2 The timing diagram for the interface design in Fig 1. To implement the design at a 40ns speed, you need an access time of less than 21ns (clock cycle — address delay — data-setup time)

***"Congratulations. Those
Polaroid color overheads
made all the difference."***

If business presentations today are as stimulating as the movies, it's undoubtedly due to the variety of innovative and colorful presentation aids available.

Like Polaroid instant color overhead transparencies, Polaroid 35mm instant slides, and graphics generated via the Palette Computer Image Recorder. Even complex color motifs can be integrated into overhead presentations. It's the most effective way to make sure that your presentation is understood and remembered.

All Polaroid films are easy to process and can be quickly converted into presentation materials at the last minute. Even white-on-blue word and graphic slides can be prepared without complicated intermediate stages. The advantages are obvious: you save time and money, have greater flexibility, in-house security, and deliver a more impressive presentation.

With Polaroid, a potentially dull address becomes a memorable presentation. And a performance that your colleagues will applaud. Polaroid instant photography is a valuable aid not only in business but also in the fields of science and medicine.

If you'd like to know how Polaroid instant pictures can help you make your work easier, simply give us a call on the Polaroid Hotline toll free (008) 22 6785 or 887 2333 for Sydney metropolitan areas.

Ogilvy MPE 0018R

New-generation microprocessors, like the Am29000, the MC88000 (see the accompanying box 'The MC88000 RISC'), and even the Intel 80386, use techniques such as interleaving, pipelining, and burst mode to get maximum efficiency from modern memory devices, such as static column dynamic RAM (SCRAM).

New memory-interface techniques are able to achieve mostly zero-wait-state

system performance with these new high-speed CPU engines, even with low-cost memory.

Simulating RISCs

To test the performance of a variety of interface architectures without needing to actually assemble any hardware, AMD has released an MS-DOS-based simulator for the Am29000 streamlined

BOEING CALC

The 3-D Power Spreadsheet

If you are:

- * Running out of MEMORY
- * Wanting more power than LOTUS or SYMPHONY spreadsheets
- * Wanting to create larger consolidation models
- * Not willing to leave the familiar LOTUS environment

Then BOEING CALC is for you! BOEING CALC was created specifically to meet the limitations of conventional spreadsheets.

FEATURES:

- * Disk based (no memory problems — spreadsheet up to 32 Mb!!)
- * 3-Dimensional (rows, cols, and pages)
- * Existing LOTUS and SYMPHONY spreadsheets run without conversion
- * Room to move (16,000 rows x 16,000 cols. x 16,000 pages)

AVAILABLE IN LAN VERSION

- * Up to 32 simultaneous users
- * Full cell range security

BOEING 3-D GRAPHICS

- * Fully compatible with BOEING CALC, LOTUS and SYMPHONY
- * Superb graphs and facilities

Evaluation systems for BOEING CALC and BOEING GRAPH are available.

instruction RISC processor. The simulator is available on Microtex (see page *6663#), or by sending an IBM PC-formatted 5.25in floppy disk and reply-paid, self-addressed packet to 'Real-world RISCs', APC, 124 Castlereagh St, Sydney 2000.

Consequently, I will use this simulator to examine Am29000 memory-interface technology, although the techniques are equally applicable to other devices.

The Am29000 execution unit uses a four-stage pipeline, allowing a peak execution rate of one instruction every

clock cycle (40ns). It has three nonmultiplexed 32-bit buses (see Fig 1): separate buses for instruction and data transfers, and a common address bus. Simultaneous instruction and data transfers can be achieved using pipelined and burst-mode transfers.

No waiting

The conventional memory design shown in Fig 1 shows a zero-wait-state SRAM design. Fig 3 shows the simulator output (using the Dhrystone program as the test

code) for this condition. The simulator predicts a rating of 20.71 million instructions per second (mips) and 39,698 Dhrystones per second. Although these numbers may seem exceptional, this is a normalised performance of only 94.7 per cent when compared to the peak performance possible with this processor.

If we used instruction burst mode with this zero-wait-state SRAM, we could obtain 41,290 Dhrystones and 21.83 mips. But how can this be? How can anything improve on zero-wait-state performance?

Bursting through

To understand what's happening, we need to look at how the CPU's four-stage execution pipeline operates. Instruction fetches overlap with data fetches; thus, they can occur simultaneously. Although the data and instruction buses are separate, they share a common address bus; thus, occasionally, they will both need the address bus at the same time. Burst mode allows sequential accesses to occur when only the first (starting) address has been placed on the address bus.

Fig 4 shows the timing of a short burst-mode instruction-fetch access. The address of the first data word is placed on the address bus for only the first cycle. It then becomes the responsibility of the RAM control hardware to provide incrementing addresses to RAM for every clock cycle in which the burst-request signal (*IBRQ) is active. Thus, the address bus is freed for data accesses. Most instruction-stream fetches tend to be sequential, so burst mode effectively speeds up RAM instruction access. However, if a 'BRANCH' instruction takes execution to a new area of the

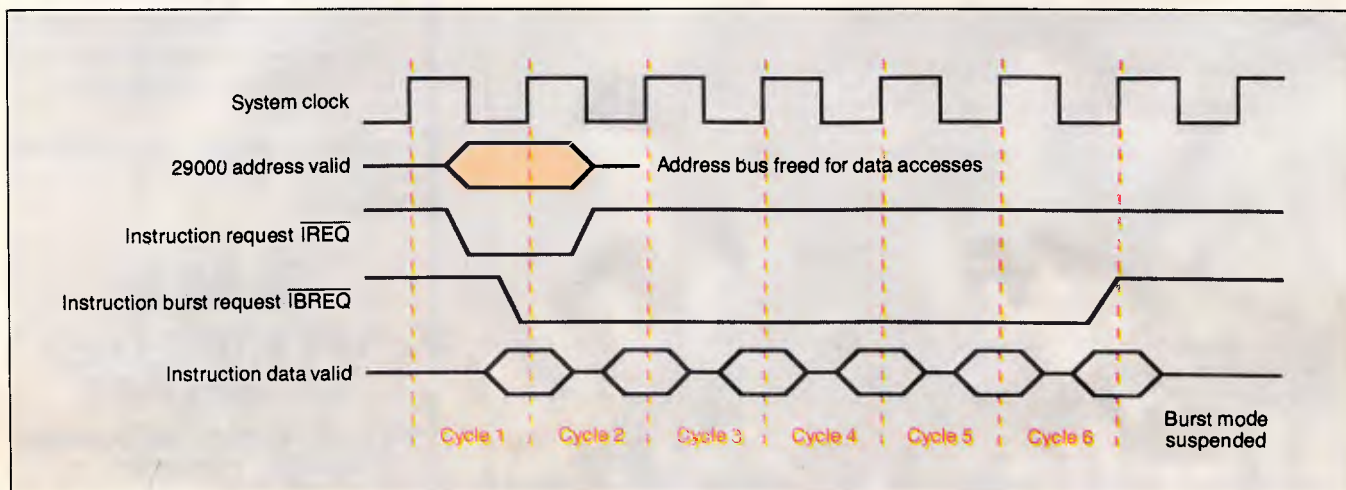

Fig 4 The timing of a short burst-mode instruction-fetch access. Notice that the instruction fetch overlaps with the beginning of each cycle except the first

code, the sequential fetch will be interrupted.

The Am29000 has a 'branch-target cache' that keeps the four instructions immediately following each branch in internal CPU memory. After executing a branch instruction once, you don't need to access external memory on its second and subsequent executions. This leaves the burst sequencer four cycles in which to terminate and start fetching instructions from the new (non-sequential) address.

Waiting for memory

Large memory systems with access times of 20ns just aren't practical. If you simulate the system in Fig 1 with one-wait-state RAM — access time is 80 (two clock cycles) — 14 (address delay) — 5 (data-setup time) = 61ns, not including buffers — you get 26,907 Dhrystones and 14.08 mips — only 64 per cent of peak performance.

Simulating performance with three wait states (approximately the best dynamic RAM (DRAM) cycle time currently available) gives 14,104 Dhrystones and 7.42 mips, or 34 per cent of peak performance.

Clearly, much of the advantage of these faster processors is lost unless they are matched by unusually high-speed memory systems.

This explains why the performance of the current generation of RISC computer systems is often so disappointing. If the test software has good locality of reference (it works well with conventional SRAM cache technology), its speed of operation approaches that of the SRAM simulation. If it doesn't, then performance leans toward that of the DRAM (main memory).

The benchmark performance of RISC machines using conventional technology is usually excellent, since the benchmarks are small enough to fit entirely within the SRAM cache. When actual applications software using matrix algebra or data in large arrays is assessed, however, the cache becomes much less effective and performance drops. We need to adopt new computer system architectures to realise the real performance potential of RISC technology.

Speeding things up

Interleaving uses two banks of memory instead of one. One bank handles even

addresses, and the other handles odd addresses. If we assume that an instruction-fetch sequence occurs at sequential addresses, then only one bank is active at any one time; the other bank can be in its row-address strobe (RAS) precharge cycle (for DRAM) or getting the next data ready (for SRAM).

This process achieves its peak efficiency with the instruction-burst-access mode of the Am29000. When the Am29000 requests an instruction-burst access, the first bank of RAM is addressed (see Fig 5). It has approximately 60ns to get its data ready. The next word of data, however, comes from the second bank of memory. If the system design is such that the next address is placed on the second bank at the start of the cycle (using an external incrementer), then that bank has approximately 100ns to prepare its data.

Furthermore, the second bank can present its data to the CPU only 40ns, or one cycle, after the first bank does. Similarly, while the second bank is being accessed, the first can be preparing to present its next data word to the CPU just 40ns later.

The best of both worlds

Although still in its infancy, BiCMOS technology (the fusion of the high-speed bipolar integrated circuit and CMOS) has immense potential in the design of fast processors for the commercial world in general and the PC world in particular. Nick Hampshire explains.

In 1947 three researchers at Bell Research Laboratories — Messrs Shockley, Bratain and Bardeen — made a discovery which changed the world.

That discovery was the transistor. In the 41 years following that discovery there were two other important developments. The first was the bipolar integrated cir-

cuit in the early 1960s which was followed about 10 years later by the CMOS integrated circuit. Now we are witnessing the birth of a third integrated circuit tech-

A cross-sectional diagram of a BiCMOS chip showing how the two different types of CMOS transistor are combined with a bipolar transistor on the right of the diagram using polysilicon fabrication techniques

nology which combines the best features of both the earlier technologies — this is known as BiCMOS.

This fusion of the two older technologies, bipolar with its high speed and CMOS with its high component density and low power consumption, is creating a great deal of excitement among both chip designers and electronic and computer system designers. In the last few months virtually every major chip manufacturer has announced plans to invest in both research and actual production of BiCMOS chips. At the recent International Solid State Circuit Conference in San Francisco, developments in BiCMOS were one of the conference sensations.

The reason for this excitement is that at last electronic chip designers will be able to produce very fast, densely packed chips with a low power consumption. But even more exciting than this is the fact that BiCMOS will allow large-scale analogue and digital circuits to be combined on the same chip — in the past these two types of circuit had to be placed on separate chips. BiCMOS technology thus looks set to increase the speed and power of integrated circuits as well as giving rise to a whole new generation of applications chips. In both areas, BiCMOS will have a considerable impact on personal computers in the years ahead.

To understand the excitement and appreciate the potential of BiCMOS technology, it is necessary to understand something about semiconductor technology, and the reasons why bipolar and CMOS technologies are different.

The semiconductor

An understanding of semiconductor technology is firmly based on the principles of quantum mechanics and its application to the energy levels within an atom. An atom is primarily made of two components — a central nucleus which is positively charged, and an outer cloud of negatively charged electrons. These electrons do not form a random cloud around the nucleus, but are organised as a series of concentric shells. Each shell contains electrons with a similar energy level.

What quantum theory states is that the energy of an electron has to be at one of a set number of energy levels. It is the existence of these energy bands which is crucial in both the conduction of electricity and in the properties of semiconductors. For a material to act as an electrical conductor some of the electrons must be excited above their normal levels. This excitation pushes the

electron into a shell further away from the nucleus and thus frees the electron and allows it to pass from one atom to another.

When the outer shell of electrons in an element is only partially filled, it is very easy to move electrons from one atom to another. Such materials are usually good electrical conductors since very little energy is required to raise an electron to a higher energy level and thereby convert it into a charge carrier. Materials where the outer shell of electrons is entirely filled are usually insulators since they require a considerable energy input to move electrons from one atom to another.

There are, however, some insulators which do not require large amounts of energy to create charge carrier electrons. Since these elements lie between the true conductors and the total insulators they are referred to as semiconductors. Normally at room temperature the thermal vibration of atoms is sufficient to generate charge carriers within a conductor, but in a semiconductor this is usually not quite enough to make the material a conductor.

When an electron in a semiconductor becomes a charge carrier it leaves a space in the electron shell of the atom, and consequently this atom acquires a positive charge. Such positively charged atoms can also act as carriers of an electrical current in exactly the same way as an electron, and they are referred to as 'electron holes'. In a normal semiconductor the number of charge-carrying electrons is always equal to the number of electron holes.

A semiconductor can be made conductive by inputting energy over and above the normal ambient thermal energy. This could be in the form of additional heat, light or electricity. All these sources of energy are utilised by different semiconductor devices. Thus a semiconductor such as cadmium sulphide becomes a conductor when exposed to ordinary light, a feature which is utilised in the construction of photographic light meters.

With semiconductors like silicon and germanium, their electrical properties can be changed by adding very small quantities of another element, such as arsenic or phosphorus. The effect of these doping elements is to create an electrical imbalance between the number of charge-carrying electrons and their opposite equivalent electron holes. Thus the addition of arsenic to silicon produces an excess of electron carriers over electron holes. The doped silicon is therefore known as N-type material. Adding phosphorus has the reverse effect

and creates a deficiency of electrons — in this case the material is referred to as P-type material.

Semiconductors which have an excess of either conducting electrons or electron holes are known as 'doped semiconductors'. All semiconductors used in integrated circuits and discrete transistors use this sort of material. Just simply doping a piece of silicon with either arsenic or phosphorus does not make the semiconductor useful. That happens when a junction is created between a P-type piece of silicon and an N-type piece. A P-N type semiconductor junction of this sort creates a one-way electrical valve called a diode. Connecting the positive lead of a battery to the P-type side and the negative terminal to the N-type side will allow current to flow through the device, the semiconductor acting as a conductor. Reversing the battery leads will result in the P-N junction acting as an insulator.

A transistor is constructed in a similar manner, only instead of using just two pieces of doped silicon it uses three. A transistor is not only a one-way valve, it is one which can be electrically turned on or off. A typical transistor would thus consist of a sandwich of P-type silicon between two pieces of N-type.

If a battery is connected across the two N-type pieces no current will flow whichever way the battery is connected. However, by connecting the central P-type piece of silicon to the negative terminal of the battery it is possible to use this source of electrons to fill all the holes in the P-type and so enable it to conduct electricity between the two N-type layers. The amount of electrical current flowing through a transistor is thus dependent upon the voltage applied to the central layer of the transistor semiconductor sandwich.

The three-layer transistor and the two-layer diode form the basis of all semiconductor devices. It is from these simple devices that the bipolar integrated circuit has been developed. The difference between these and CMOS integrated circuits lies in the design of the transistor. CMOS uses what are known as Field Effect Transistors (FETs). These do not rely on the PNP or NPN junction but instead control the flow of current through a channel of P or N-type silicon by means of an electric field. This field is produced by a metal 'gate' placed over the semiconductor channel and insulated from it by a layer of silicon oxide. Hence the term Metal Oxide Semiconductor (MOS). The C in CMOS stands for 'complementary' which simply means that both P and N-type doped silicon are used in the device.

Meet Microsoft® Bookshelf™. The most useful, exponentially powerful writing tool since the word processor.

It's as if E.B. White, Samuel Johnson, Pierre Roget and John Bartlett created the definitive writer's reference. A Style Guide-Dictionary-Thesaurus-Quotebook-Almanac-Fact Finder-Speller-Editor-Form Maker-Post Code Directory-Business Information Sourcer.

Ten of the most helpful reference and writing tools ever. Together. In one electronic bookshelf. Microseconds away.

Microsoft Bookshelf CD ROM Reference Library applies audio compact disc laser technology to your PC. You get electronic access to key references. Instantly. Logically.

It's easy to learn, easy to use. Find a quote. Check a fact. Edit a phrase. Spell "relief". Zip to a Post Code. More.

In just seconds, Bookshelf searches the source, calls the information to the screen. You can paste it right into your document. Next?

PHILIPS

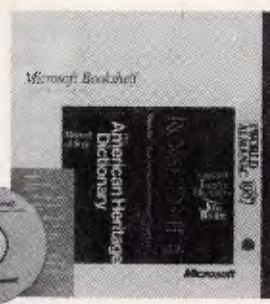

Bookshelf is memory-resident. It rooms with your word processor. It's always there. A keystroke away. Nothing comes between you and your writing.

You'll need a CD ROM drive. So Bookshelf is available with a Philips CD ROM Drive. Or, you can use it with your own drive.

If Bookshelf sounds like the best of all possible worlds, call Richard Siegersma on (03) 873 4411.

CD ROM and Associates have over forty CD ROM titles available for specialised use, including "Encyclopaedia of Science and Technology", "PC-SIG", "Public Domain Software", "Groliers Encyclopaedia", "Science Helper", and many more.

Bipolar chips

All the earliest integrated circuits used bipolar technology. This was a logical extension of the fabrication process for both transistors and diodes. This process involved taking a slice from a large crystal of silicon and selectively doping different areas of the slice with either P-type or N-type dope. This had the effect of printing a pattern of different electrical properties into the silicon slice.

This doping process was performed by placing the silicon slice into a furnace,

heating it up and then introducing the dope chemical into the furnace atmosphere in the form of a gas. The dope molecules would then diffuse into the surface of the red hot silicon thereby creating a doped surface layer. By masking out areas of the silicon slice it was possible to dope only selected areas of the slice.

In this way bipolar integrated circuits were formed from a number of transistors and diodes 'printed' on to the surface of the silicon slice. The undoped silicon has a very high resistance and virtually behaves as an insulator. Connections were made between the components on the chip by depositing a thin layer of metal over the surface of the chip and then etching away unwanted portions to leave a pattern of interconnections between components.

The virtue of the bipolar transistor is that it is able to switch very rapidly between acting as an insulator and as a conductor. Consequently, bipolar integrated circuits are also very fast devices, typically with clock speeds of several hundred megahertz. Bipolar transistors also have a good linear response, which simply means that the

amount of current flowing through the transistor is directly related to the voltage applied to the central slice in the transistor sandwich. This means that bipolar circuits are ideal for use in any application where variable voltages are being handled — in other words, analogue circuits.

Another virtue of bipolar transistors is that it is very easy to construct devices which can handle target currents. Increasing the dimensions of the transistor will allow it to switch larger current loads. Again this is a frequent requirement in many analogue circuits.

Against the undoubted virtues of bipolar technology for constructing integrated circuits there are also severe limitations. The first is that bipolar chips cannot be made very dense — the bipolar transistor requires an area of the chip surface which cannot be reduced beyond certain limits. The other main problem is that bipolar circuits require substantial power to drive them — the electrical energy put into the central slice of the transistor to make it conductive. This energy input is dissipated as heat, and excessive heat production can cause problems in an integrated circuit. Overheating can cause the entire component to fail, and limits the maximum size of the chip. Thermal stress in large chips can also lead to failure. As a result, bipolar technology has been confined to use on relatively small integrated circuits.

The excellent analogue properties of bipolar devices means that virtually all analogue integrated circuits are fabricated using this technology. Their potentially high speed and high power output means that they are often used as the 'glue' between large CMOS chips. This very important application area includes such vital functions as bus drivers, clock generators, I/O drivers, and so on. Without these bipolar 'glue' chips, it would be impossible to construct any of the fast current generation of PCs.

CMOS chips

The MOS integrated circuit family, of which CMOS is a member, is based around the concept of the field effect transistor or FET. This type of transistor was first invented in 1961 but was not employed in the construction of integrated circuits until the end of that decade. The principles behind this type of transistor are totally different to those used in the bipolar transistor. Instead of directly injecting electrons into a normally insulating area of doped silicon, the FET induces an electric field in a channel of silicon. This induced electric field

will then convert the silicon channel from being an insulator to a conductor.

This technique for constructing a transistor has many advantages as well as a few disadvantages. A major advantage is that the electrical input to the gate — the area of metal above the silicon conduction channel — is electrically isolated from the silicon channel itself. This contrasts with the bipolar device where the central 'base' layer of silicon is directly connected to the conductive layers.

WENDIN-DOS

**The Multitasking, Multiuser
MS/PC-DOS
Replacement**

WENDIN-DOS is a self-bootable MS/PC-DOS replacement operating system that is TRUE multiuser and multitasking. It is 100% compatible with the MS/PC-DOS file structure. WENDIN-DOS provides real multiuser operation on a single computer with existing software.

- RUNS ON ANY IBM-PC, XT, AT, 80386 OR TRUE COMPATIBLE
- ALLOWS ADDRESSING OF EXTENDED MEMORY
- SUPPORTS MULTIPLE TERMINALS WITH NO EXTRA SOFTWARE REQUIRED
- PROVIDES TRUE CONCURRENT MULTITASKING AND TASK SWITCHING
- SUPPORTS MULTIPOINT BOARDS

Just The FAX

For Your PC or MAC

The first affordable PC based Fax
available from under \$1,000

Introducing a range of PC based facsimile including the fabulous JT-Fax internals and portables for IBM PC's and compatibles, being joined soon by high performance, full network compatible cards for PC's and the Macintosh.

Stop walking & waiting

Now instead of walking back and forwards to the fax, worrying over confidential documents or feeling cut off from information whilst out of the office, you can send and receive faxes at your desk, home, or motel.

Save money Fax it.

With postal charges today the economic way to stay in touch with customers and clients is fax. Fax provides a fast and reliable way of delivering documents.

Feature packed

All the features demanded in PC based facsimile have been streamlined, eliminating cost but delivering the functions you need:-

- * Easy operation from menus with on line help or the command line
- * Interfacing with programs
- * Delayed transmission allows calls overnight at off peak rates
- * Mixed text and graphics for letterhead and signature or any graphics you want
- * Group broadcast to customers or branches in your dialing directory

Become productive Gain convenience Get the FAX

This means that in bipolar transistors there is always a leakage of current from the base into the conductive layers. In contrast, the gate area of a FET transistor is insulated from the rest of the transistor, which means that in comparison to bipolar devices it requires much less current to switch the transistor on and off. Less drive current means less heat, and therefore the ability to construct larger chips without fear of thermally induced failure.

The absence of any leakage of current from the gate area of a FET transistor to the channel also means that when the transistor is in its non-conducting mode, it has a very high resistance.

However, the use of an induced current in the conduction channel means that the FET is inherently much slower than the bipolar transistor. Indeed, there is a direct relationship between power consumption and speed in MOS circuits which does not exist in bipolar circuits. There is also a far less precise relationship between gate voltage and the amount of electricity allowed to flow through the conduction channel, which means that MOS technology is not ideal for constructing analogue circuits.

MOS technology is, however, ideal for constructing large-scale digital integrated circuits. Not only is power consumption lower and the consequent heat generation much reduced, but the properties of the FET enable chip designers to greatly reduce the chip area needed, not just for single transistors, but also for that key component of all digital circuits, the memory cell.

In bipolar circuits a memory consists of a 'flip flop' circuit. This is a digital circuit which can exist in one of two states. It requires four transistors and a couple of resistors, and this type of memory cell is still used in the so-called 'static' memory chips. The low leakage of electricity across a FET transistor allowed designers to create a new form of memory cell which only requires a single transistor and a capacitor. Data is stored in this form of memory cell by charging the capacitor to represent a '1' or leaving it uncharged to represent a '0'.

The only problem with this type of memory is that sooner or later the charge stored in the capacitor leaks away and the data in the memory is lost. This problem is overcome by regularly reading each memory cell and then rewriting its contents, a process which simply recharges the contents of the capacitor. This form of memory is now the most widely used and is called 'dynamic memory'.

All the large integrated circuits (IC) in use today are fabricated using one of

the three different sorts of MOS technology. These are N-MOS and P-MOS, where the N and P simply indicate the type of doping used for the base slice of silicon.

CMOS is a slightly more sophisticated product which uses silicon with both N and P doping. This means that CMOS has the advantage of requiring far less power than either of the other two MOS technologies. Most of the large chips in a PC will be fabricated in either N-MOS or P-MOS, while CMOS is exclusively used in low-power applications such as portable computers, calculators and wrist watches.

Bipolar + MOS = BiCMOS

The current situation is, therefore, that bipolar technology is used to create fast integrated circuits — in particular those for applications involving analogue or high-power functions. However, for densely-packed, large, complex digital functions, especially those where low power consumption is important, then MOS technology is the natural choice.

In the past this division between the two main semiconductor technologies has not been particularly important. Improvements in MOS technology has resulted in enormous improvements in speed, component density and size of integrated circuits over the past 10 years. The number of components within an IC has leapt from just a few thousand to hundreds of thousands and — in some cases — even millions. Operating speed has increased from one or two megahertz to 20 or even 30MHz, while actual component sizes are now only about 10 per cent of what they were.

Further improvements in MOS technology in terms of speed and component size are now beginning to show signs of impending physical limitations. Up to now designers have been able to make chips faster by making the component size smaller and reducing the distance between connected components. The laws of physics dictate this process cannot go on forever.

However, in a complex circuit such as a microprocessor chip, not all portions of the chip need to operate at the same speed. In fact, the maximum operating speed of such a chip is dictated by a relatively few components such as 'data and address bus controllers'. Implementing these in a higher-speed technology would dramatically increase the overall speed of the chip. After all, a large mainframe computer is not architecturally very different from a processor like the 80386 or 68020 — it is simply constructed using a far higher-speed tech-

nology, such as ECL or gallium arsenide, in critical areas of the circuit.

At present, processors such as the 80386 and 68020 are limited to operating at between 20 and 25MHz. If it were possible to implement the speed-critical areas of the processor circuit in a high-speed semiconductor technology capable of running at 200 or 300MHz, then the whole performance of the chip would be boosted to twice or three times its current rating.

Further improvement in the performance of microprocessor-based computers can be obtained by integrating as much as possible of the circuit into as few chips as possible. Again, chip speed as well as chip function is the current problem. If you look at a PC circuit board you will find that a considerable number of bipolar integrated circuits are required in its construction. Some of these are required to perform operations at speeds in excess of that normally available on MOS circuits. These are usually related to parts of the circuit like the address and data bus or the clock drivers.

Another area where bipolar circuits are required in a PC is in the video board. If you look at an EGA or VGA board you will find that about 30 per cent of the chips are bipolar devices. Some of these are high-speed digital control devices, others are analogue devices which create the variable voltage signal which drives the colour monitor or TV.

The last area where bipolar devices are required is the I/O board. MOS circuits are not good at delivering a lot of power, and that is one thing that an I/O circuit needs to do. A lot of electrical power is dissipated down a 3-meter printer cable. Consequently, I/O drivers are usually bipolar devices.

Thus, there are a lot of bipolar integrated circuits used in the construction of a device such as a personal computer. In chip-count terms they probably comprise about 25 per cent of the chips, but in terms of actual circuit complexity they account for just a fraction of one per cent. This is not a desirable situation since the greater the number of chips, the more expensive the device is to construct, the more error-prone it is and the slower its operating speed.

Manufacturers have sought to overcome some of these problems by using special chips known as Applications Specific Integrated Circuits (ASICs) which are simply a means of putting a number of bipolar chips into a single package without having to design a special semiconductor circuit. These have reduced the package count considerably in many PCs. However, it would be infinitely preferable to be able to put many

WE HAVE THE MONOPOLY ON QUALITY & SERVICE

car+tel (ka : 'tel) n. 1. A company in Caulfield South specifically organised to give you the utmost quality and service in computers and peripherals.

If speed, power, portability and price are a criterion, call Cartel who supply a wide range of desktop and portable computers. For the Datamini range the COMPANION WORD Software package includes Word Processor, Form, Print, Screen and Music Processors.

DATAMINI - AT - COMPACT DESKTOP

A super-fast Turbo system offering multi-tasking and multi-user. Runs any industrial off-the-shelf software, OS/2, PC-DOS, XENIX etc.
16-24 Bit 80286 micro-processor (10MHz.)
640 KByte RAM, Licensed Phoenix BIOS.
Choice of Colour graphics or Hercules graphics card.
Serial and Parallel ports.
1 x 1.2 MByte Teac floppy drive.
Free Companion Word Software.
Priced at \$2250

(floor stand — tower cabinet version \$2490)

DATAMINI - XT - COMPACT DESKTOP

An extremely versatile system.
8088-1 16 BIT micro-processor (10MHz.), 4 layer main board.
640 KByte RAM, Licensed Phoenix BIOS.
Choice of Colour graphics or Hercules graphics card.
Serial, parallel and game ports, battery backed up clock and calendar.
2 x 360 KByte Teac floppy drives.
Free Companion Word Software.
Priced at \$1570

Optional MS-DOS 3.21.
With GW Basic add \$140.

All prices are inclusive of sales tax.

THE DATAMINI 386

Our new generation professional desktop computer is here. This 20MHz. computer with a starting point of 2MB. of RAM offers diversity and variety of uses only available in the past to mini and mainframe users.

With UNIX or XENIX operating system the versatile Datamini 386 becomes a true multi-tasking and multi user desktop.

In addition, users can utilize a broad range of operating environments including OS/2, PC-MOS and MS-DOS 3.3. Tap into all the best applications available, customized or off-the-shelf commercial, technical or scientific.

Available in Desktop or Tower - Floor Stand configuration.

Priced at \$4990 incl. tax

CPC/XT TURBO DESKTOP

8088-2 16 BIT micro-processor (8MHz.)
640 KByte RAM, Licensed BIOS.
Choice of Colour graphics or Hercules graphics card.
Serial, parallel and games ports, battery backed up clock and calendar.
2 x 360 KByte floppy drives.

Priced at \$1195

(8088-1 10 MHz Turbo \$1250)

CPC/AT TURBO DESKTOP

640KB RAM memory — expandable to 4MB on main board.

of these bipolar components directly on to large MOS ICs.

This need to integrate high-speed digital and analogue bipolar circuits with high-density MOS circuits on the same chip has been the driving force behind the development of BiCMOS. The problem with combining the two technologies has essentially been a manufacturing problem. It was possible to put both technology devices on the same chip, but it required a vastly increased number of manufacturing steps. This made the process very expensive and also lowered the yield of usable devices to an uneconomic level.

The application of BiCMOS

The STC development of an efficient BiCMOS process relies on the use of polysilicon-emitter technology which has been used to create high performance bipolar elements plus non-compromised CMOS technology. With this and a combination of devices, it is possible for designers to address many different applications areas which involve the integration of complex digital functions and demanding analogue functions on the

same chip, in order to improve speed and reduce assembly costs. It also allows the construction of purely digital chips with compact CMOS circuitry and bipolar components, such as output buffers for better line driving.

This polysilicon-emitter technology has not compromised the behaviour of either of the two constituent technologies and above all, is relatively easy and cheap to fabricate. It can be made in a conventional bipolar or CMOS fabrication facility and can be designed with any ratio of CMOS to bipolar. The CMOS components can be used to construct highly complex and compact digital circuits.

Already the CMOS components are being constructed with a standard 2µm technology and STC will be lowering this to 1.25µm in the very near future. This very small component size is comparable to that currently being employed on standard pure MOS and CMOS devices. The other performance ratings of the STC BiCMOS CMOS components is equally comparable to that pertaining to conventional CMOS technology.

The BiCMOS bipolar devices have a minimum fabrication feature size of 1.5µm for any bipolar device, which is a small feature size. These BiCMOS

bipolar devices have a maximum clock rating of well over 300MHz and are potentially capable of at least doubling this speed as the technology develops. They are also able to function at voltages between the normal operational five volts and 20 volts, and development should improve this rating further.

The initial products are all quite small devices, and mainly directed at the telecommunications industry. This is an area where the ability to integrate both analogue and digital functions on the same chip is causing great excitement, particularly when the resulting devices are also able to operate at speeds of 100MHz or more.

As manufacturers develop the BiCMOS process, so they will start to use it on larger chips. One of the largest announced so far was described at the International Solid State Circuits Conference in San Francisco by National Semiconductor. This is a very high-speed 256k static memory chip which has been designed in BiCMOS for use in supercomputers. Industry analysts are expecting a flood of such announcements over the next 12 months.

Chips of this size using BiCMOS are

VUWRITER

THE WORD PROCESSOR THAT IS AS FLEXIBLE AS YOU ARE CREATIVE

Experience the satisfaction of using VUWRITER when, time after time, perfect printed copies are produced in your choice of Language, typeface, and including complex CAD diagrams and scientific symbols.

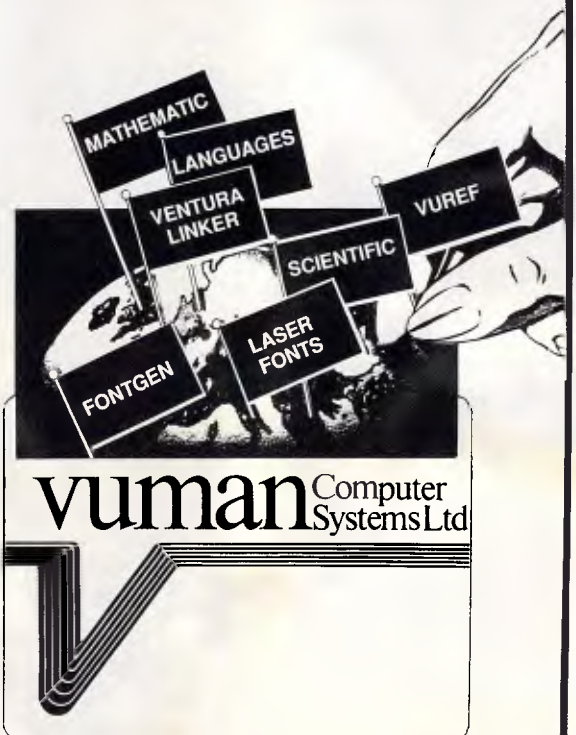

Today the demand is for maximum flexibility. The VUWRITER software package offers this flexibility by allowing the application to be changed at will, while still providing all the power of a dedicated word processor.

VUWRITER was conceived and developed in the department of Computer Science at the University of Manchester, birth place of the computer as we know it today. The brief was to produce a full function word processing package that was simple to operate and able to cater for non-standard characters such as those used in scientific documents or multilingual texts.

Three cost saving ways to networking flexibility

TOP-NET® from Turn-point

TOP-NET® Model I+ is a set of hardware and software enhancements for IBM PCs, and compatibles which combine with, and extend IBM PC DOS or Microsoft MS DOS to implement a distributed LOCAL AREA NETWORK.

The TOP-NET® Model A+ Networking system uses the well proven 2.6 M bits/second ARCNET compatible cards, in conjunction with the easy to use TOP-NET® networking software to provide an

intermediate speed network for use in more intensive networking environments.

The TOP-NET® Model E+ II, based on the industry standard Ethernet Local Area Network, is an integrated hardware and software networking product for IBM/PC/XT/AT. The TOP-NET® E+ II Card provides the user with a fast and powerful system for communicating with many users on an Ethernet Network.

All TOP-NET® Network Solutions can be implemented with the TOP-NET® Networking software, or if you choose, Novell Netware or the IBM PC LAN program.

All systems solutions can be easily expanded by purchasing additional network cards and cable. With TOP-NET® you have access to the most cost effective way of bringing the power of multi-user computing to your office, POS terminals, engineering or teaching environments.

CT1088 SOFTWARE

TECHNOLOGY

still very rare, and most manufacturers are adopting the same approach as STC and another company, LSI Logic — to gain experience in the technology by constructing small devices before designing much larger circuits. In fact, one of the principal initial applications to which LSI Logic is applying BiCMOS technology is in the fabrication of a mixed digital/analog ASIC.

Conclusion

The technology of BiCMOS is still very much in its infancy, and it will take at least another three or four years before it reaches any reasonable level of maturity.

With BiCMOS a whole range of applications become both economically and technically possible — for example, digital radio, high-definition digital TV, and miniature portable phone systems. In the personal computer field BiCMOS will enable manufacturers to create much faster processors. It will also enable designers to construct cheap voice and image input systems.

dBASE SUPERPOWER

dBXL the Diamond Release

\$CALL

The dBASE III Plus "Superclone". More features and is FASTER than dBASE 3 PLUS. Upgrade to version 1.2.

NETWORKER PLUS

\$CALL

Networker Plus implements record and file locking for dBXL and Quicksilver. Send/receive screen dumps and messages from users on the network. Interactive "talk" mode with other users. Execute or schedule an .EXE, .COM, .BAT to run on any other workstation in the network.

QUALIGRAPH

\$CALL

Qualigraph is a software tool that provides a set of tools for documenting, describing software quality control and metrics, and test preparation in management, development, and maintenance phases of the software life cycle. Languages analysed: C, Cobol, dBASE3, Fortran, Pascal, PL/I, PDL, PLM86. Running on PC/DOS, UNIX, VAX VMS, IBM VM/CMS and MVS.

YOURDAN ANALYST/DESIGNER

System & Dataflow diagram editor for analysts/programmers
PVCS

Controlling revisions and versions of source code during development.

QUICKSILVER the Diamond Release

\$CALL

Compiler for dBASE 3 Plus and dBXL code. NEW Quicksilver version 1.2. Upgrade now.

PLINK86 PLUS - Overlaylinker

\$CALL

DOCUMENTOR

\$CALL

Document all your dBASE code. Generate tree diagrams, hierarchy charts. Document DBF files, cross-reference fields, variables, macros and much more.

UI PROGRAMMER

\$CALL

An advanced, yet easy to use, dBASE CODE GENERATOR. Generates Menus, Windows and complete applications.

dBCompiler - dBASE2 compiler

dBCHART/Flipper - dBASE graphics

dBX - dBASE to C translator

dANALYST - conversion utility

DEBUG III - debugger utility

dBRIEF/Brief - powerful editor

Silvercomm or Adcomm comms library

C-WORTHY INTERFACE LIBRARY

features: Menus, Screens, Windows,

Forms, Data Input, 700+ page manual

dB VISTA III - DBMS devl. system runs

on DOS, UNIX, VMS, OS/2

For more details call or write to MDMS

(02) 745-1995. PO BOX 734, Strathfield, NSW 2135

Authorised Reseller

Analysing your RAMdisk needs

RAMdisks can be a PC user's dream or a memory-hogging nightmare. RECORDER gives you a painless way of checking disk file accesses so you can optimise RAMdisk use.

PC users are always looking for ways to squeeze just a little more speed out of their computers. Often, today, the limiting factor is the time spent waiting for the disk drive. Its mechanical operations just can't keep up with the speedy silicon of the microprocessor. A RAMdisk is one good answer to the problem of disk delays, since it provides a level of performance that can't be matched by the fastest hard disk in town. Another technique involves organising the physical ordering of the sectors in such a way as to minimise head movement.

If you're not careful, however, these advanced techniques can sometimes do more harm than good. Your efforts to speed up the disk may slow down other operations, for example. Memory assigned to a RAMdisk is unavailable for executing programs. When usable memory is reduced, large programs often run inefficiently or (the worst case) not at all. Tuning the system for optimum performance thus requires precise balancing of your resources. And to do this, you've got to know exactly what your individual processing needs are.

RECORDER.COM will help you decide how to distribute your available resources. It measures your usage of disk I/O by keeping track of how many times each of your files is accessed. With this information in hand, you can select the specific files that will benefit most from being kept on the speedy RAMdisk. Moreover, if you use one of the disk optimisation programs that let you locate

RECORDER 1.0 (c) 1987 Ziff Communications Co. PC Magazine - Tom Kihlken				
File Name	Total	Read	Write	EXEC
RECORDER.ASM	88	88	0	0
SETUP.ASM	69	65	4	0
SETUP.COM	43	16	27	0
SETUP.TMP	40	2	38	0
RECORDER.COM	17	3	9	5
RECORDER.EXE	13	13	0	0
COMPILE.BAT	12	12	0	0
EDIT.EXE	5	0	0	5
AUTOEXEC.BAT	4	4	0	0
LINK.EXE	3	0	0	3
DEBUG.COM	3	0	0	3
EXE2COM.EXE	3	0	0	3
MASM.EXE	2	0	0	2

Fig 1 The report from RECORDER shows the number of times each file was read from, written to, or executed. The specific files shown on your display will differ

files so as to minimise head movement, RECORDER will show you which files should be located closest to the FAT.

The easiest way to get a copy of RECORDER.COM is to download it from Microtex on Telecom's Viatel (see page *6663#). Alternatively, you can create the .COM file either by assembling its source code, RECORDER.ASM, or by loading and running the RECORDER.BAS program. Both these list-

ings are printed here and are also available for download from Microtex. And lastly, you could send a blank formatted 5.25in disk with a stamped, self-addressed package to RECORDER, c/- APC, 124 Castlereagh Street, Sydney 2000.

Using RECORDER

To begin logging your file activity, just

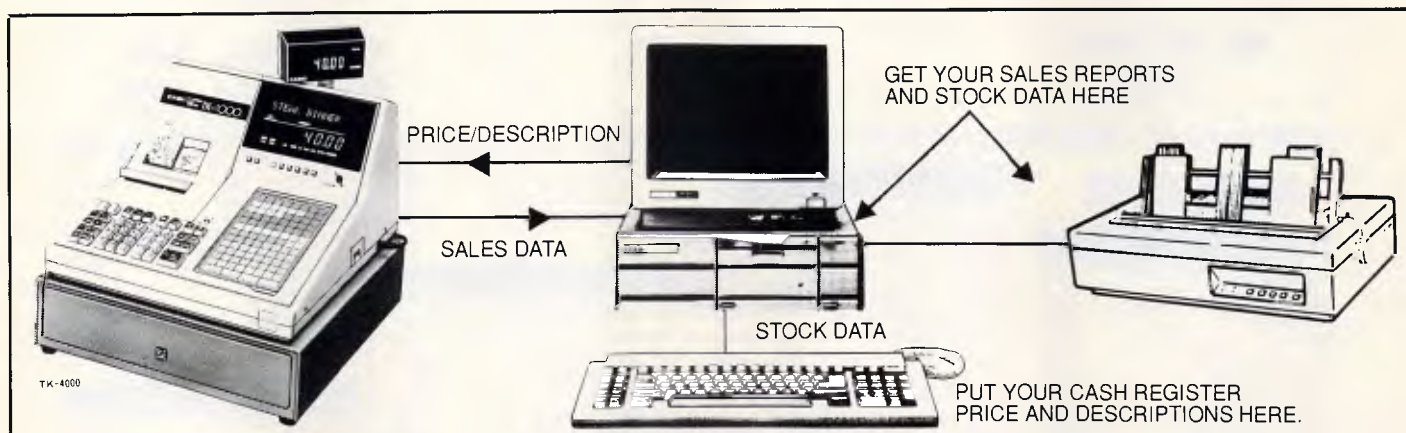

```

Two much simpler ways to learn Lotus 1-2-3...

or Multimate, Wordstar, MS Word 3, dBase IIIplus, Displaywrite 3, WordPerfect, PC-MS-Dos Multimate Advantage II, and other popular titles.

Our unique teaching concepts have received international acclaim for successfully addressing the need for all computer users to learn their software efficiently and by a method best suited to their individual requirements.

Self Instruction Talking Tapes

The Listen and Learn concept comprises professionally composed and recorded audio cassettes delivering friendly instruction by voice and aided by related, colour coded reference notes.

It takes you finger by finger through your keyboard, clearly and succinctly explaining your selected title and its functions.

Learn your software anywhere, any time, at your pace.

Priced at only \$129.50 (Dos) and \$189.50 (all other titles).

On Screen Instruction

The unique "On-Screen" learning concept is by Intouch Computing, the company that brought you "The Complete PC Tutorial". It teaches your software programme simply, quickly and efficiently, without manuals.

Your computer becomes your friendly teacher.

Coloured windows display step-by-step instructions on your screen and you are able to run the tutorial while operating the software package simultaneously.

Learn WHEN you want...WHERE you want...at your own pace and acquire a working understanding of the title selected in LESS THAN AN HOUR and a thorough knowledge in several short lessons.

Priced from only \$89.95.

Both product ranges are available from leading computer dealers or by using the coupon below.

* The above tutorials are intended for use with existing software programmes.

Order or enquire by phone today.

MODEMS

Direct from the manufacturer

MEGAMODEMS 12/123

The Avtek Megamodems provide Australia's best value communications products, with a range of fully automatic, autodialling modems. Megamodems are suitable for data transfer from personal computers, terminals, mainframes and mini host computers and for all videotex services such as Viatel. The use of the latest technology has enabled us to make the Megamodem more compact and reliable than any other modem. Price is very competitive and reflects efficiencies incorporated in the design. The Megamodems are locally designed and built. Service, support and specialist R&D for the Megamodem range is all based in Australia. Available either as a standalone RS232 model or as a plug in 1/2 card for IBM PCs and compatibles. The Megamodem range of modems are Telecom authorised.

Fully Hayes AT Smartmodem Compatible: The Megamodems are industry standard "HAYES SMARTMODEM" compatible which means they can take advantage of all the communications facilities of packages such as Crosstalk, Open Access, Symphony and Multicom. All communications parameters such as baud rate, parity and number of stop bits are set up automatically by the software and the Megamodem. Using appropriate software data can be sent and received while the Megamodem is unattended.

LAST CHANCE AT

Beat the memory chip price rise!

ULTRA PC/AT 286

New Ultra PC/AT 286 is one of the most outstanding PCs on the market today.

It is OS/2 and MS DOS compatible, and can easily be integrated with the corporate systems you may already have in place.

But the real triumph of the ULTRA PC AT 286 is its competitive pricing.

Even though its power and features compare more than favourably with PCs such as the IBM PS 2, the Olivetti M280 and the Compaq Deskpro 286 the ULTRA costs only a fraction of the price.

load up RECORDER with the following command:

RECORDER [n] [/R]

The optional *n* parameter is used to specify the maximum number of filenames RECORDER will hold in its table. The default value, 200, is enough to handle a normal day's work, but you can increase the table size to a maximum of 2000 filenames, if necessary. Each additional entry requires 20 more bytes of RAM. The optional /R switch resets the table if it becomes filled. When you reset the table, all entries are erased and recording starts all over again. The /R is always ignored on the initial installation.

Once RECORDER is in place you just proceed with your normal PC work. Each time a file is accessed, it will be entered appropriately in a table similar to that shown in Fig 1. You can view this table any time you're at the DOS prompt simply by entering RECORDER again.

The data contained in the file table will allow you to optimise your disk operations. You'll notice straight away, for example, that batch files generate a lot of disk activity. When DOS runs a batch file, it opens it, reads one line, closes it, then executes the line. This process is

repeated until the entire file is processed. Since most batch files are small in size but disk-intensive in use, they're ideal candidates for placement on a RAMdisk.

Chances are your program data files will also be at the top of RECORDER's list. It's a common practice to put them on the RAMdisk, as well. If you use this technique, however, you must be extra careful to copy these files back to your hard disk at reasonably frequent intervals and especially at the end of a session. Everything in RAM — including everything on a RAMdisk — disappears as soon as the machine is turned off or rebooted. If the system should crash with your latest masterpiece on the RAMdisk alone, you'll wish you'd never heard of such 'time savers' as RAMdisks.

Interpreting the table

The operating system assigns a series of numbered clusters to each file it stores. Each cluster is made up of one or more smaller units known as sectors. The sectors are the smallest unit of storage found on the disk. Sectors are arranged in groups called tracks, each track forming a ring. When a file is read, DOS figures out which sectors are

needed and requests them from the disk controller. Each request requires the controller to position the head over the selected track. One request can read from one up to an entire track's worth of sectors. When the required sectors are scattered about on many tracks, multiple requests must be issued. The time required to complete the data transfer is largely a function of the number of individual requests made.

The numbers in the file table columns represent how many read or write requests were made to the device's controller. Every file that has been used since RECORDER was installed is listed. The read column is used each time a file is created, opened, or read from. The write column is used when a file is written to or closed.

The EXEC column is a little different. It shows the number of times a program was executed. Depending on its size, running a .COM or an .EXE program may require more than one actual disk access, though RECORDER increments the EXEC column by one regardless of the file size. The totals column is simply the sum of the other three.

You'll notice the filenames listed lack any drive and path designation. To keep RECORDER simple, all files with the

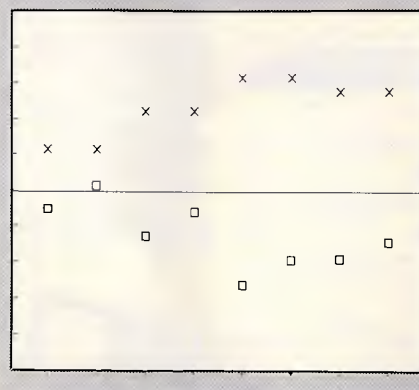

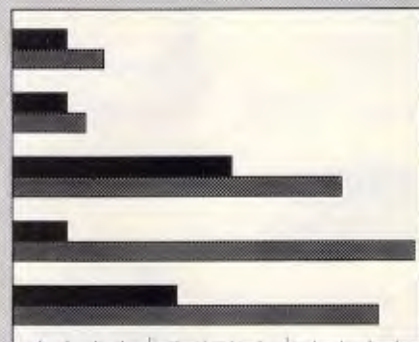

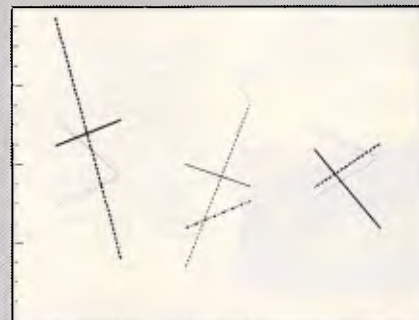

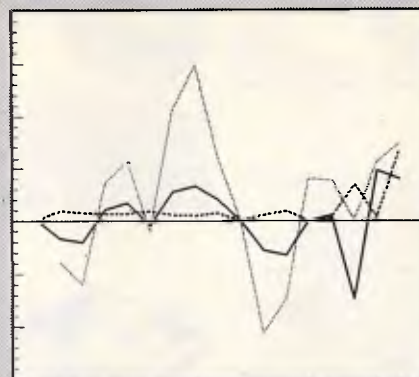

COMPLETE STATISTICAL SYSTEM FOR YOUR PC!

CSS (Complete Statistical System) is a high performance, integrated statistical data processing, database management, and graphics system for science, business, and engineering applications, that runs on your PC! The comprehensiveness and speed of CSS make it a realistic and attractive alternative to mainframe statistical packages. CSS is incomparably faster and more flexible than mainframe programs and at the same time offers an equal or better selection of analytical methods.

CSS is capable of Basic and Descriptive Statistics, Multiway Frequency Tables, Nonparametric Statistics, Exploratory Data Analysis with Analytical Graphs, Multiple Regression Methods, Time Series Analysis with Modeling and Forecasting, General Anova/Ancova/Manova, Contrast Analysis, Discriminant Function Analysis, Factor Analysis/Principal Components, Multidimensional Scaling. \$950

Here are some reasons why we believe that CSS is the most powerful, advanced, and elegant statistical package on the market.

MAXIMUM SIZE OF DATA FILES	
CSS: As large as DOS allows	SPSS/pc+: As large as DOS allows
GRAPHICS	
CSS: Large selection of colour, hi-res, quality graphs, very flexible interface between numbers and graphics (all CSS output can be converted into a variety of graphs; also, user selected results from different CSS analyses can be easily combined in a single graph).	SPSS/pc+: Limited character based graphs, rigid interface between numbers and graphics.
USER INTERFACE	
CSS: Fast hierarchical menus; the entire user interface is optimised to limit the number of keystrokes necessary to perform an analysis; fast selection of individual variables or lists of variables; previous variable selections are "remembered" (and can be edited) across consecutive analyses; batch processing is also supported.	SPSS/pc+: Command language; some commands are several lines long (in case of a typo, e.g., a misspelled variable label, the entire command has to be re-typed); commands can also be submitted via batch files.
PROCESSING LISTS OF VARIABLES	
CSS: Supported by all procedures (where applicable, lists of dependent variables can be automatically processed with the same design, e.g., in t-tests, Crosstabulations, ANOVA, Regression, etc.)	SPSS/pc+: Supported by all procedures (where applicable, lists of dependent variables can be automatically processed with the same design, e.g., in t-tests, Crosstabulations, ANOVA, Regression, etc.)
SELECTION OF SUBSETS OF CASES FOR ANALYSES	
CSS: Yes (on line selection of cases via "include if" or "exclude if" selection conditions that remain in effect for the entire CSS session or until cancelled; the selection conditions can be saved for repeated use)	SPSS/pc+: Yes (via logical "select if" conditions)
SCREEN DISPLAY OF OUTPUT	
CSS: All CSS output is displayed via Scrollsheets. These are dynamic, scrollable, user controllable, multi-layered tables with cells expandable into pop-up windows. All numbers and labels (or selected subsets) in Scrollsheets can be instantly converted into a variety of presentation quality graphs. The contents of different Scrollsheets can be instantly aggregated, combined, compared, plotted, printed, or saved.	SPSS/pc+: Output scrolls across the screen (a "MORE..." prompt appears when the screen is full).
DISPLAY FORMATS FOR NUMBERS	
CSS: Flexible; all display formats are dynamically adjusted to yield maximum display precision while preserving compatibility of formats within columns of numbers; special extended formats are available where applicable (B-weight =094027563759532)	SPSS/pc+: Fixed, regardless of value (e.g., if values are very small, SPSS cannot display them with sufficient precision)
PRINTING	
CSS: Selective printing or saving of results (e.g., only specified tables with results, or subsets of tables); all results can also be automatically printed (or saved) in formatted reports; graphics can be printed on all plotters, dot matrix, colour, and laser printers. (including printers supporting PostScript)	SPSS/pc+: Only via dumping all screen output from an analysis to the printer or file; hi-res graphics are not available.
ACCESS TO INDUSTRY STANDARD FILE FORMATS	
CSS: Intelligent read/write interface to (unlimited size) Lotus, dBI, dBIII+, DIF, SYLK, and a variety of formatted and unformatted ASCII files; CSS imports not only data values but also formats, labels, headers, logical variables, missing data codes, etc.	SPSS/pc+: No (only ASCII; an optional file conversion package is available)
SUBMITTING OUTPUT FROM ONE ANALYSIS AS INPUT FOR ANOTHER	
CSS: In addition to matrices (corr., cov., etc.) and scores that are calculated for each case (e.g., residuals, factor scores), all other numbers generated with CSS analyses can be converted into the CSS data file format.	SPSS/pc+: Only matrices (corr., cov., etc.) and scores that are calculated for each case (e.g., residuals)

- Auto answerback (Similar to Telex)
- Auto or manual control
- Dial-up or leased line operation
- Pulse or Tone Dialing
- Automatic speed ranging
- Speaker for call progress monitoring
- Baud-rate converter with 48 character buffer (V23)
- Synchronous or asynchronous operation
- Fully self contained power supply
- Low power operation
- Metal case (R.F. shielded)
- Visual monitoring of important interface circuits (7 LED's)
- Full or half duplex (V23)
- Double adaptor plug to allow use of standard phone (Mode 1/3/5)
- Telecom Authorised (C87/37/65)

DELUXE PRINTER STAND

- Restores order to your work area without occupying extra space.
- Feeds and refolds paper under the printer automatically.
- Adjustable paper deflexors ensure smooth flow of paper.
- Made of moulded plastic.
- Suitable for most printers

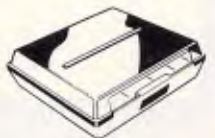

C21058 (80 column) **\$69.95**

PRINTER STANDS

- Restores order to your work area.
- Conveniently stacks paper printout in document tray automatically
- Made of black plastic coated steel
- Suitable for most printers
- Excellent value at these prices!

C21054 (80/132 column) **\$26.95**

ENCLOSED PRINTER STAND

- Keeps your paper and print-outs neat and orderly.
- Transparent cover makes it easy to check on paper supply.
- Paper can be fed from the centre or the rear according to the design of the printer.
- Removable drawer which allows paper to be changed without moving the printer.
- Retractable rear basket makes print-out collection fast and convenient.
- Suitable for most printers

C21055 **\$59.95**

COMPUTER PAPER

- Quality paper at a low price! 2,000 sheets of 70 gsm bond paper.
- Cat. C21003 11 x 9 1/2" **\$39.95**
- Cat. C21005 15 x 11" **\$67.95**

RS232 FAST CABLE

- Makes RS232 interface configuring fast and simple. 3 slide switches enable line swapping functions, positive and negative voltages are displayed on 6 tricolour LED's.

Connector: DB25 plug on 100mm cable and DB25 socket on 100mm cable.

Indicators: Tricolour LED's for pins 2(TD), 3(RD), 4(RTS), 5(CTS), 6(DSR), 20(DTR).

Switches: 3 Slide switches to swap leads.

Power: Interface power. Enclosure: Black, high impact plastic. Dimensions: 85 x 95 x 30mm

X15710 **\$145**

RS232 BREAK OUT BOX

- A simple way of monitoring RS232 interface lead activity. Interface powered, pocket size for circuit testing, monitoring and patching. 10 signal powered LED's and 2 spares. 24 switches enables you to break out circuits or reconfigure and patch any or all the 24 active positions.

SPECIFICATIONS:

Connectors: DB25 plug on 80mm ribbon cable and DB25 socket. Enclosure: Tricolour LED's for TD, RD, RTS, CTS, DSR, CD, TC, RC, DTR, (EPC).

Jumper Wires: 20 tinned end pieces. Power: Interface power.

Enclosure: Black, high impact plastic. Dimensions: 85 x 95 x 30mm

X15700 **\$94.95**

THE BUTTON SPIKE PROTECTOR

- Surges and spikes are caused not only by lightning strikes and load switching but also by other equipment being switched on and off, such as fluorescent lights, electric motors, fridge freezers, air conditioners, etc.

For effective protection such spikes must be stopped before they reach your equipment. Simply plug The Button into an outlet and it will protect all equipment plugged into adjacent outlets on the same branch circuit. The Button employs unique metal oxide varistor technology and will dissipate 150 joules of electrical energy (nearly twice that of comparable surge arresters.)

SPECIFICATIONS:
Voltage: 240V Nominal
Total Energy Rating: 150 joules
Response Time: 10ns
Protection Level: 350V peak

..... **\$34.95**

COMPUTER CABLE

CIC6 6 conductor computer interface cable. Colour coded with braided shield. (to IE-422 specifications).

Copper conductor 6 x 7/0.16mm.
1-9 metres **\$1.90/m**

- Length 0.5 metres

P19046 **\$99.95**

36 WAY CENTRONICS CABLES

- Male to male connections.
- All 36 pins wired straight through.

P19042 2 metre **\$19.95**

P19040 6 metre **\$29.95**

PRINTER LEAD FOR IBM*

- Suits IBM* PC XT and compatibles
- 25 pin D* plug (computer end) to Centronics 36 pin plug

Cat.P19029 1.8 metres **\$14.95**

Cat.P19030 3 metres **\$19.95**

2 & 4 WAY RS232 DATA TRANSFER SWITCHES

- If you have two or four compatible devices that need to share a third or fifth, then these inexpensive data transfer switches will save you the time and hassle of constantly changing cables and leads around.

- No power required
- Speed and code transparent
- Two/Four position rotary switch on front panel

- Three/Five interface connections on rear panel
- Switch comes standard with female connector

2 WAY Cat.X19120 only **\$59**

4 WAY Cat.X19125 only **\$99**

2 & 4 WAY CENTRONICS DATA TRANSFER SWITCHES

- Save time and hassles of constantly changing cables and leads around with these inexpensive data transfer switches. These data switches support the 36 pin centronics interface used by Centronics, Printronics, Data Products, Epson, Micronics, Star, and many other printer manufacturers.

- No power required
- Speed and code transparent
- Two/Four position rotary switch on front panel

- Three/Five interface connections on rear panel
- Switch comes standard with female connector

2 WAY (X19130) only **\$59**

4 WAY (X19135) only **\$99**

RS232 DATA SWITCH WITH TESTER

- No power required
- Ideal for 1 computer to 2 peripherals or 2 computers to one peripheral.
- 25 pin RS232 "D" connectors.
- Six dual coloured LED indicators showing current flow status:

T.D. Transmit Data
R.D. Receive Data
R.T.S. Request To Send
C.T.S. Sear To Send
D.S.R. Data Set Ready
D.T.R. Data Terminal Ready

CPF CONTINUOUS POWER FILTER SPIKE ARRESTOR

- The Fortron CPF Filtered Electronic Spike Protector provides a protective electronic barrier for microcomputers, printers, telephone systems and modern electronic typewriters, audio and stereo systems and other sensitive electronic equipment.

The CPF provides protection from dangerous electrical spikes that can cause anything from obvious damage (like immediate equipment failure) to less obvious harm that can drastically shorten a system's life.

Additionally, CPF's filtering capability helps eliminate troublesome and annoying interference, general hash created by small motors, fluorescent lamps, and the like that threaten the performance and shorten equipment life of unprotected electronic components.

SPECIFICATIONS:
Electrical rating: 220-260 volts
(AC) 50Hz 10 Amp
Spike/RFI Protection: 4,500 amps for 20-millisecond pulses.

Maximum clamping voltage: 275V differential mode.
Cat.X10088 **\$69.95**

9 PIN TO 25 PIN CONNECTOR ADAPTORS

- NEW! The ideal solution! Features gold plated pins.

X15668: DB9 Plug to DB25 Socket
X15669: DB9 Socket to DB25 Plug

..... each **\$10.95**

U.S. TO AUSTRALIAN TELEPHONE ADAPTOR

- Australian plug to U.S. socket

Y16008 **\$8.95**

UV EPROM ERASER

- Erase your EPROMs quickly and safely. This unit is the cost effective solution to your problems. It will erase up to 9 x 24 pin devices in complete safety. In about 40 minutes (less for less chips). High UV intensity at chip surface ensures EPROMS are thoroughly erased. (Dimensions 217 x 80 x 68mm)

SAMSUNG 12" FLAT SCREEN COMPOSITE MONITOR

FEATURES....

- Flat, high contrast, non-glare screen
- High resolution, 80 or 40 character display
- Tilt/swivel base
- Compatible with Apple* and IBM* colour composite signal

SPECIFICATIONS....

Picture tube: 12" diagonal and 90° deflection

Phosphor: Available in Green or Amber

Video input signal: Composite Signal

Polarity: Negative Sync

Level: 0.5-2.0Vp-p

Impedance: 75ohm

Scanning frequency:

Horizontal: 15.734 KHz + -0.1%

Vertical: 50-60Hz

Video bandwidth: 20MHz

Active display area:

216(H) x 160(V)mm.

Display character:

80 character x 24 rows.

Input terminal: RCA Phono Jack.

Controls:

Outside: Power Switch, Contrast, Brightness, H-Shift, V-Size.

Inside: H-Width, H/V hold, H/V linearity, Focus.

Power supply: 110/120V 60Hz, 220/240V 50Hz

Dimensions:

310(W) x 307(H) x 300(L)mm

Weight: 8.1 Kg

Shipping weight: 9.6 Kg

RITRON 2 MONITORS

Stylish monitors available in green or amber displays and featuring swivel base that tilts forward and back 30 degrees and swivels right to left 60 degrees!

SPECIFICATIONS:

CRT DISPLAY SIZE: 12 inches non-glare 90 degree deflection.

INPUT SIGNAL: 1.0 - 2.5V p-p composite video signal.

INPUT IMPEDANCE: Normal 75 ohm, high approx. 50K ohm.

INPUT TERMINALS: RCA phono jack

RISE AND FALL TIME: Less than 25 us

VIDEO BANDWIDTH: 20MHz

Corner: 900 lines

Geometric distortion: 2% or less

Linearity: less than 2%

CONTROLS: Front: Power On/Off, brightness, contrast

Rear: Vertical hold, Horizontal hold, Vertical line, Vertical size

SAMSUNG TTL 12" MONITOR

FEATURES....

- At least a monitor with both TTL and Composite modes!
- High contrast, non-glare screen
- High resolution, 80 or 40 character display
- Swivel/Tilt base

SPECIFICATIONS....

Picture tube: 12" diagonal and 90° deflection

Phosphor: Green (P42)

Video input signal: Composite/TTL

Switchable

Polarity: Negative/Positive

Level: 0.5 - 2.0Vp-p/4-0 - 1.5Vp-p

Impedance: 75ohm, more than 6.8K ohm

Scanning frequency:

Horizontal: 15.75 KHz + -0.1%/18-432KHz + -0.1%

Vertical: 47-63Hz

Video bandwidth: 20MHz

Active display area:

Composite: 206(H) x 160(V)mm.

TTL: 216(H) x 160(V)mm

Display character:

80 characters x 25 rows.

Input terminal: Phono Pin Jack, 9 pin D-Sub Connector.

Controls:

Outside: Power Switch, Contrast, Brightness, Signal Select, V-Hold, V-Size.

Inside: H-Width, H/V linearity, Focus, H/V-Shift.

Power supply: 110/120V 60Hz, 220/240V 50Hz

BOOKS

UNDERSTANDING UNIX

James R. Groff, Paul N. Weinberg
The exploding popularity of the UNIX operating system is one of the most important trends in computing in the 1980's. UNIX is available on hundreds of different computers, ranging from personal computers to mainframes and supercomputers. *Understanding UNIX* offers an overall perspective on UNIX, including a discussion of where UNIX fits in the worlds of computing, business, and education. Individual chapters address the UNIX structure, file system, multuser capability, specific applications tools, and more. "A book that balances scope with depth; comprehensiveness with brevity." -Alan Kaplan
Cat. B21240 \$44.95

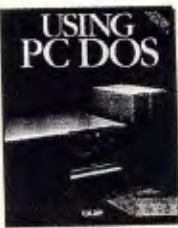

IBM PC

An introduction to the operating system, Basic programming, and applications.
Larry Joel Goldstein
This classic and latest edition is the most comprehensive learning tool available for understanding and programming the IBM PC family. Features include a thorough explanation of the MS DOS and PC DOS operating systems, a "hands-on" approach to BASIC programming, chapters on memory, printer graphics, flow charting, file handling, games, screen graphics and sound.
B20020 \$39.95

HANDS ON

Practical tips and useful programs for IBM PC's from the editors of PC World.
A collection of the best tips, programs, and routines for IBM computers from the popular "Hands on" and "T" columns. Covering both hardware and software, the book is organized so that you can quickly find information on virtually everything you need to know.
B20100 \$34.95

USING PC DOS

"Using PC DOS" is the only combination of a beginning tutorial, advanced guide, and lasting reference that gives you ultimate control over your PC's most important software: the operating system! Beginners will learn how to...
• Prepare your diskettes
• Manage DOS directories
• Erase, rename, and copy files
• Print what appears on your screen
• Avoid disastrous errors
Advanced users will learn...
• Master path names
• Maneuvering through directories
• Customise DOS
• Use RAM disks
• Create AUTOEXEC.BAT files
Regardless of your level of expertise, you can use the Command Reference section to...
• Gain quick access to 63 most frequently used DOS commands
• Recognize valid DOS command phrasing
• Cope with frustrating DOS error messages
Cat. B20200 \$49.95

GETTING STARTED WITH THE IBM PC AND XT*

-David Arnold
An authoritative guide from the PC World Library to using the PC and its more powerful cousin, the XT*. If you're new to computing, you'll appreciate their tutorial approach, as you become familiar with keyboard, disks, and operating system (DOS 1.10 and 2.00). You'll learn to set up and handle electronic files, evaluate your software needs, and program in BASIC.
B20030 \$34.95

APPLE II ASSEMBLY LANGUAGE

-Dr. Marvin L. De Jong
• Teaches assembly language programming at the beginning level - no prior knowledge of 6502 assembly language needed.
• Directs you in hands-on computer exercises and experiments, with both software and hardware.
• Enables you to interface the Apple II to outside devices, eg: a/d and d/a converters, timers, etc.
• Provides interfacing circuits and programs that can be used on the Apple II without modification.
• Enhances your power as a programmer in your use of the Apple II.
• Gives you a more general understanding of how microcomputers work than can be obtained by programming in BASIC or any other high level language.
Cat. B20940 \$36.95

IBM PC TROUBLESHOOTING & REPAIR GUIDE

-Robert C. Brenner
Keep your IBM PC in top operating condition with this handy reference book. Inside you will find pages of schematics, photos and block diagrams to help you identify problems. Simple instructions tell you what's wrong and how to fix it fast.
• Make most repairs with few or no tools
• Quickly zero-in on a malfunctioning component
• Reduces downtime
• Pays for itself many times over in repair savings
• Easy to understand circuit diagrams.
The IBM PC Trouble Shooting and Repair Guide will make even the computer novice feel comfortable with the complex world of electronic trouble shooting. This fully illustrated book is recommended for anyone who uses an IBM PC.

DISKS, FILES AND PRINTERS FOR THE APPLE II

-Brian D. Blackwood, George H. Blackwood
Learn how to create and use text files while running a computer program, and to make hard copies of the results on a printer. Covers Apple II, II+, IIe, and Franklin Microcomputers. You will discover:
• Using the system includes booting DOS master, initializing disk, backup disk, accessing the drives, verifying, saving programs, and loading programs.
• DOS commands enable you to operate the disk drives and printer from the keyboard and to change languages (Integer BASIC to Applesoft or vice versa).
• Sequential files include creating, updating, reading, extending, refining, and multisection.
• Random access files are faster and take less memory.
• Executive files can be used to control a series of steps that do not require the operator to make keyboard inputs.
• Delicacies of TAB and SPC can be overcome in 80 characters per line printers.
Cat. B20950 \$34.95

INTRODUCTION TO BASIC

-Jeffrey B. Morton
This book is lucidly written, and is in two parts. The first teaches BASIC, and the second consists of a dozen carefully constructed projects. These are wide-ranging and get the language into the context of solving real-world problems. Each project is laid out with a set of variables to give the reader insight into the practical applications of the language. Any version of BASIC can be used to solve the projects and the other excellent examples scattered throughout the book.
Cat. B21245 \$16.95

"C" SELF STUDY GUIDE

-Jack Purdum
Learn at your own pace as this self directed study guide takes you through the basics and into advanced areas of the C programming language. The unique format allows you to advance quickly or proceed slowly. The book is divided into two parts:
Questions: of varying degrees of difficulty to guide beginners over the rough spots and to challenge the more experienced C programmers.
Answers: that include many complete programs for testing new functions and for illustrating tips, traps, techniques and short cuts.
Cat. B20690 \$37.95

CPM PROGRAMMER'S ENCYCLOPEDIA

-Bruce Brigham
The CPM Programmer's Encyclopedia is a time saving, comprehensive reference for serious CPM users. Covering all the commands and syntaxes for CPM 2.x and CPM 3.0, this encyclopedia gives you the information you need in an easy-to-use format especially designed for programmers. The CPM Programmer's Encyclopedia is the only major compilation of CPM commands and syntaxes. If you use CPM extensively, you should not be without this important reference guide.
Cat. B21260 \$44.95

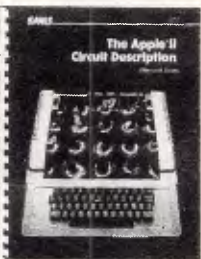

INSIDE THE IBM PC

(Revised and expanded edition) -Peter Norton
The widely acclaimed guide to the IBM PC's inner workings. The latest edition now covers every model of the IBM micro: PC, XT and AT, and every version of DOS from 1.1 to 3.0
B20080 \$44.95

HARD DISK MANAGEMENT

For IBM PC XT, AT & compatibles -Thomas Cain and Nancy Woodward Cain
Now you can use a hard disk to its fullest advantage with this guide to managing your hardware using DOS, batch files, and menu systems. It introduces you to various disk management concepts you need to know, while providing step by step techniques for dealing with them. Key topics include partitioning, formatting, the TREE command, sub-directory usage, and file/memory capacity. It also offers extensive information about DOS along the way: how it fits in, and how hard it can work for you.
B20070 \$39.95

APPLE II CIRCUIT DESCRIPTION

-Winston D. Gayler
• Covers all Apple II motherboard and keyboard versions.
• Helps you learn about microcomputer hardware in general and Apple II hardware in detail.
• Provides you with accurate schematics and verified waveforms to rely on for servicing and repair.
• Explains the advanced concepts of daisy chains, interrupts, direct memory access, and the ready line.
• Gives you many valuable hints for successful interfacing.
• Contains tutorials on video signals, memory IC's and the 6502 microprocessor, as well as full explanations of advanced concepts.
• Each chapter contains an overview for the beginner and a detailed section for the more adventurous.
• Ideal for students, technicians, hobbyists, engineers, and others who need Apple II technical information.
Cat. B20960 \$54.95

INTERFACING TO THE IBM PERSONAL COMPUTER

-Lewis C. Eggbrecht
This book describes the interfaces, resources, and functions of the Personal Computer. While not presenting specific interface designs or projects, it provides information and techniques that can be used in various projects.
• Describes the components of the Personal Computer.
• Examines the processor card and its functions.
• Reviews the 8088 microprocessor.
• Discusses fully the PC bus system, its signals, its timing, its characteristics.
• Examines the system interrupts and the modes of operation of its timers and counters.
• Looks at the PC memories and describes its methods of data transfer.
• Describes interface signal conditioning and some BASIC interfacing commands.
Essential reading for everyone who owns or uses an IBM PC!
Cat. B20075 \$34.95

PRESENTATION GRAPHICS ON THE IBM PC & COMPATIBLES

How to use Microsoft Chart to create dazzling graphics for professional and corporate applications.
-Steve Lambert
With Microsoft Chart (version 2), your IBM PC or compatible, and your printer, you have what it takes to produce clear, colourful business charts in a matter of only minutes. Author Steve Lambert shows how you can easily select, create, and modify the chart - column, bar, line, pie, high-low, area, scatter, or a combination chart, that best communicates your message. And with more than 60 state-of-the-art output devices to choose from. From plotters to slide makers to colour printers, you can create professional quality charts that will give all your presentations dramatic and convincing impact!
Cat. B20000 \$39.95

PASCAL PRIMER

-Mitchell Walte, David Fox
If you are learning programming or have dabbled in the popular language BASIC and wish to learn the capabilities of Pascal, this book is definitely written for you. Written and illustrated with a touch of humour, the informative text describes Pascal program structure, Pascal variables, Pascal procedures, and many other features. There are chapters on decision making statements, numeric functions, string functions, arrays and sets, and much more. The eight appendices present facts about the advantages and disadvantages of Pascal, components of a Pascal system, interfacing assembly language routines, and other useful information.
Cat. B21120 \$34.95

ESSENTIAL APPLICATIONS FOR THE IBM PC AND XT

-Patrick Plemmons
If you bought your personal computer to streamline just one activity, you're really missing out! This essential volume in the PC World Library demonstrates the amazing breadth and power of the PC, and helps you to take advantage of the computer's potential as a personal and professional tool. It explains the principal categories of application: spreadsheets, word processing, database management, account/finance, graphics, and integrated software, and the major software packages in each category. It tells you how to suit the software task at hand, and how to use the computer most efficiently.
B20090 \$34.95

1-2-3 TIPS, TRICKS & TRAPS

-Dick Anderson, Douglas Cobb
Contains a collection of valuable techniques to help users of Lotus 1-2-3 get the maximum benefit from this powerful integrated software package. Designed as a quick reference, this book shows you hundreds of shortcuts, offers help with unexpected problems, and suggests techniques for using some of 1-2-3's little known capabilities.
Cat. B20140 \$44.95

1-2-3 BUSINESS FORMULA HANDBOOK

An invaluable source of tips and techniques for creating, editing, and using 1-2-3 formulas in a wide range of personal and business applications.
To help you use each formula, the Handbook presents all formulas in sample 1-2-3 templates with complete cell listings so that you can easily re-create any formula in the book.
Cat. B20138 \$44.95

THE C PROGRAMMER'S HANDBOOK

-Thom Hogan
While other books tell you how to learn C, this one shows you how to use it. It's a literal encyclopedia of the information you'll need to get it to work for you, efficiently and effectively. Handy and well organized, it gives you quick access to the things you need, when you need them, plus a clear definition of C language with examples and explanations of restrictions and defaults. You won't find an approach this understandable and objective anywhere else.
B20120 \$39.95

INSIDE MICROSOFT OS/2

-Gordon Letwin
A rare and exciting technical examination of the philosophy, key development issues, programming implications, and future of the MS OS/2 operating system. Gordon Letwin, Chief Architect for MS OS/2, provides a true behind the scenes view of the process of merging Microsoft's vision of an automated office system with the realities of software development. Here is revealing information every MS OS/2 programmer, as well as high tech and office automation specialists, will find invaluable.
Letwin discusses:
• The powerful graphics, true multitasking, hardware and software protection, and program "encapsulation" features that were incorporated into MS OS/2.
• The restrictions of the microprocessor and the constraints of upward and downward MS DOS of OS/2 compatibility.
• The software architectural details from a design and programming perspective.
• Central issues for the future: a new MS OS/2 file system, a fully protected environment, and an enhanced network support.
This book will be a cornerstone book in the library of anyone interested in MS OS/2. You can't get a more "inside" view. (352 pages)

RECORDER.BAS: A BASIC program that will automatically create RECORDER.COM

same name are counted on the same line. If you have files in several directories with the same name, the table won't differentiate between them; this may be a good reason to get organized and get rid of the duplicates.

When looking through the table, don't be surprised to see some filenames you've never heard of before. Many applications programs create temporary files. They're normally deleted when the program terminates so you never know about them, but they don't escape RECORDER's watchful eye. Some programs, such as LINK.EXE, let you specify a drive letter for this type of scratch file. Your RAMdisk would be a perfect place for them. It's a shame more programs don't provide this feature.

The output table is normally sorted by descending order of the totals column, but you can easily sort it by any other column. For example, to sort by the EXEC column, just enter

RECORDER | SORT / +34

This command sequence uses piping and the DOS SORT utility to sort the table beginning with the 34th character. (The read column begins with character

20, and the write, with 27.) After using piping to sort the output, you'll notice still another strange file the next time you list the table. When DOS pipes output, it creates a temporary file in the root directory of the default disk. Different versions of DOS use different

*'FCB functions were
made obsolete with DOS
2.0. Since they're still
used by older software,
RECORDER must be
able to work with them.'*

temporary filenames. Versions 2.x use names such as %PIPEn.***. Beginning with Version 3.0, the name consists of eight digits (such as 42621836). Although the names may seem random, they're actually derived from the system time.

The file table maintained by RECORDER isn't limitless. Should the message "Table is saturated" appear at the end of the listing, the table is filled. When this happens, no more entries can

be added, although current entries will continue to be updated. Before continuing, you'll probably want to save the current table entries. The easiest way to do this is to redirect its output into a file, thus:

RECORDER /R > FILES.LOG

This creates a copy of the table in the file FILES.LOG. At the same time, the /R option resets the table so you can start again. If you find yourself filling the table frequently, just specify a larger table size the next time you load RECORDER.

After studying the list, you're ready to begin tuning your disk. Files with the highest totals are prime candidates for RAMdisks. If you're not already familiar with using a virtual disk, the accompanying box 'Shifting into High Gear with VDISK' will show you how it works. Other often-used files (especially those too large to keep in RAM) should ideally be located on the outermost sectors. When selecting files for this prestigious perch, choose only those that won't be modified, such as executable programs. When a file is copied or deleted its sectors get reallocated by DOS, destroying the continuity you're trying to achieve. The reason the outer sectors are fastest

XTREE PRO

NEW

JUST ARRIVED FROM U.S.A.!

The latest version of XTREE designed for power users who need almost instantaneous disk re-organisation combined with text editing.

Advanced disk management for today's professional

- **Improved file management** — up to 16000 files.
- **Quick disk logging** — up to seven times faster.
- **Multiple drive logging** — up to 26 drives.
- **Dynamic Text Editor** — create and edit a file from within Xtree Pro.
- **File attribute security protection** from movement or deletion of System Files.
- **Multiple file specifications** — up to four different file specs.
- **Special view command** — view files of different formats.
- **Command shell** — DOS like Command line.

R.R.P. **\$245**

**TRADE-IN
YOUR XTREE!**
**UPGRADE TO
XTREE PRO**
FOR ONLY
\$65.00

IMPORTANT
When buying XTREE
or XTREE PRO
make sure your
software has the
sticker on it.

This product has been imported
especially for the Australian market by the
EXCLUSIVE DISTRIBUTOR.

To qualify for update advice and technical support
you must write this exclusive serial number, shown
below, on your disks and on the enclosed reply
paid Registration Card and return to...

SERIAL NUMBER

XTREE

The standard for file and directory management

For novice and small system users who need to organise their hard disk chaos quickly and efficiently.

- Intuitive graphic display of directory structure.
- Single keystroke operations on individual or groups of files to copy, move, delete, rename, view or print.
- Sort files by name extension, size, date and time.
- Modify DOS file attributes.

R.R.P.

KEYBOARD BARCODE READER

BARCODE READERS

ASP's AUSTRALIAN designed and built BARCODE READER connects between the keyboard and an IBM PC/XT/AT or clone.

When a barcode is scanned the PC is tricked into thinking the scanned characters have been typed on the PC keyboard. No more software hassles!

Including WAND/2000 \$649*.

ASP also makes RS232 BARCODE READERS, LABEL SOFTWARE, OEM MODULES and ZIPCARD READERS.

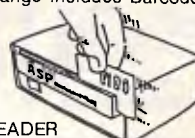

NEW PRODUCTS

Our new range includes Barcode Readers

with 32K of battery backed RAM, and/or Clock, and/or LCD Display. They can operate standalone (data being downloaded at your convenience) or connected directly to a computer. They can even control solenoid door locks!

Uses include time clocking and costing, file tracking, security systems.

Our LOW COST PORTABLE BARCODE READER (battery operated) should be available by the time you read this. All designed here in Australia! Ring for prices and Barcode advice. Dealers/OEMs welcome.

ZIPCARD READER

ARE you getting maximum return from your investment?
IS there more you can learn?*

SYBEX BOOKS WILL SOLVE ALL YOUR PROBLEMS!

SYBEX have published over 200 books for effective microcomputer education. We offer you the chance to buy three from this vast range. BEGIN YOUR SYBEX LIBRARY TODAY. It will be one of the best investments you will ever make.

*SYBEX books bring you **SKILLS** — not just **INFORMATION***

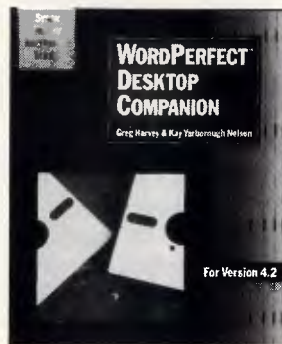

ADVANCED TECHNIQUES IN AUTOCAD Robert M. Thomas

An indispensable guide to efficient, customised computer-aided design and drafting with AutoCAD, including a complete introduction to AutoLISP programming and a look at the latest features of Release 9. It is for architects, engineers, drafters, technical illustrators — any user of AutoCAD seeking new proficiency and power.

\$59.95

WORDPERFECT DESKTOP COMPANION Greg Harvey and Kay Yarbrough Nelson

This compact encyclopaedia offers detailed, cross-referenced entries on every software feature, organised for fast, convenient on-the-job help. Includes self-contained enrichment material with tips, techniques and macros. Special information is included about laser printing using WordPerfect.

For Version 4.2.

\$49.95

MASTERING VENTURA Matthew Holtz

The complete guide to desktop publishing on the IBM PC, using Xerox's Ventura Publisher. Covers every feature in detail, from exploring the software's menu structure for the first time to putting finishing touches on a complicated publishing project. Practical examples show the full range of tasks: business letters, newsletters, invoices, press releases, brochures, books, technical documents and more.

Shifting into high gear with VDISK

If you've never used a RAMdisk, you really ought to give it a try. Everyone will DOS 3.0 or higher already has it available, and most memory expansion boards come packaged with similar software. If you haven't yet expanded to 640k, now may be the time. With a full megabyte you'll be able to allocate 384k for a RAMdisk while maintaining 640k for your DOS applications.

VDISK is a device driver that is loaded when DOS is initially started. It then steals some RAM and configures it like just another drive. To use it, make sure the file VDISK.SYS is on your boot disk. Then you'll need to add a line to your CONFIG.SYS file. If you don't already have this file, you can create it with any ASCII text editor. CONFIG.SYS should be in the root directory of your boot disk. The syntax for VDISK is

```
DEVICE=C:\DOS\VDISK [n]
[n]
```

This example assumes that the VDISK driver is located in the DOS subdirectory. The *n* parameter specifies the size of the disk in kilobytes. If you're using a machine with extended memory installed, the /E parameter will instruct VDISK to utilise it.

The drive letter for your newest disk will be one greater than DOS assigned to your last physical drive. For most users, who have one hard disk, this will be 'D:'. If you create multiple drives with VDISK, each will automatically use the next available letter. Don't try for-

matting the virtual disk; DOS does that by itself when installing VDISK. Likewise, don't try to use the DISKCOPY command with VDISK.

How much memory should you allocate to the RAMdrive? Well, everyone's needs are different. RECORDER provides you with a clue as to which files should (if possible) be stored on the RAMdrive, and your job is to save just enough ordinary free memory to run your largest program without losing speed. You could run CHKDSK to show how much you've got left and then dig through your program manuals to determine their requirements. In most cases, however, it's easier just to keep increasing the VDISK size until you get the 'Insufficient memory' error when running your largest program. Most users with 640k can spare around 196k. Of course, if you load a lot of other TSRs (print spoolers and disk caches also fall into this category), you may want to use a smaller virtual disk.

Load the new disk by copying your most-used files to it. Putting the necessary COPY commands in your AUTOEXEC.BAT file makes this step painless. Then adjust your path statement so that the RAMdisk is the first drive listed.

For example:

```
PATH=D: \ ; C: \DOS ; C: \UTIL
```

This ensures that files copied onto the RAMdisk will be read from there rather than from the slower drive C:

Tom Kihlken

DOS file functions

Functions for file control blocks

Function	Purpose
0Fh	Open file
10h	Close file
14h	Sequential read
15h	Sequential write
16h	Create file
21h	Random read
22h	Random write
27h	Random block read
28h	Random block write

Functions for file handles

Function	Purpose
3Ch	Create file
3Dh	Open file
3Eh	Close file
3Fh	Read file
40h	Write file
42h	Move pointer
44h	I/O control

These DOS file functions are counted by RECORDER to determine the extent of file activity.

is because the file allocation table is also located there. Files located closest to the FAT can be read with the least amount of head movement.

Rearranging a hard disk is best done with one of the specialised disk management utilities. As an alternative, you can copy all your files to floppies, reformat the hard disk, then copy the files back in the order of highest utilisation. Since you'll be replacing the files one by one, be sure to keep an accurate record of the directory structure. If you take this approach, this would be a good time to get rid of all your duplicate and obsolete files as well. Directories full of unnecessary files slow the operating system as it searches for good files. Before reformatting the disk, be sure to make a second, complete backup as double insurance against lost files.

DOS file handling

The Disk Operating System is king when it comes to putting data on the polished platters. Although some programs (such as The Norton Utilities) are smart enough to write to disk by themselves, most are not. The DOS services (including file I/O) are accessed by software interrupt 21h. The location of the interrupt 21h service routine is located at address 0000:0084h. By modifying this vector, RECORDER can monitor every DOS function request. The functions available with this powerful interrupt are well documented in the DOS *Technical Reference* manual. RECORDER watches for those that concern file I/O and extracts the vital information it needs from the registers. These functions are summarised in the table 'DOS File Functions'.

As the table indicates, DOS uses two different systems in handling files. The first is somewhat old-fashioned and dates back to the time when DOS was evolving from the CP/M operating system. It uses a system of file control blocks (FCBs) and data transfer areas (DTAs). The FCB is a block of information in memory that DOS needs to locate the required file sectors. A separate FCB is needed for each open file.

The layout for an FCB is shown in the diagram 'File Control Block Fields'. Some of the data (such as the name and extension) for the FCB is provided by the requesting program. The remainder is supplied by DOS when the file is opened. The only part of interest to RECORDER is the filename and extension. The DTA is a chunk of memory into which and out of which the disk controller transfers information directly. Its location is always controlled by the requesting program.

FCB functions don't support subdirectories and so were made obsolete with

HELP FOR WORDSTAR PRO 4

This program has been specifically written for Wordstar Professional 4 users. You can throw away your manual and use this instant on line help.

NOW ONLY \$95

Benefits include:-

- ★ Forget all your manuals and books
- ★ Find everything you need in WS help
- ★ Plain English on line help
- ★ Complete reference available
- ★ 50,000 words of help
- ★ Even includes some items not found in the manual
- ★ Faster than any book — no need to leave Wordstar
- ★ Suits beginners to advanced users
- ★ Only uses 50Kb Ram

Les Steins Envelope works with all word processors

Envelope makes envelope addressing another chore your computer does better. You can grab an address from inside your favourite word processor, type one in, or get one from a built-in address list. Look up the post code if needed, put an envelope or label in your printer and Envelope will print it all, nicely lined up.

ONLY \$59

When starting your computer or word processor, **Envelope** loads into RAM where it sits patiently. You then use your computer or word processor as usual — work on a spreadsheet, run a data base, type and print documents or letters. When it's time to print an envelope, press a 'hotkey', and **Envelope** pops up a picture of an envelope inside your application.

You then type a name and address directly on the envelope, or highlight the address already in your letter and it will 'jump' onto the envelope! Once the names and addresses are on the envelope, you may store them in an 'Address List' for later use. You can also browse through this address list choose an address previously entered and it will be placed on the envelope.

Have an address but not the post code? With **Envelope**, when you type in the address, it will display the correct post code! Press a key and the post

code will 'jump' onto the envelope by itself, or with the city and state thrown in.

Before printing, you can select from a complete range of different sizes of envelopes or labels, 1, 2 or 3 across. When you are ready, load the envelope or label into the printer, press a key and out comes the printed envelope or label.

If you have a large mailing to do you can first tag the addresses in the Address List you want included and then do a bulk print on multiple envelopes or labels.

File Control Block Fields

The layout of the FCB showing the size and placement of the file information maintained by DOS

DOS 2.0. Since they're still used by older software, however, RECORDER must be able to work with them.

Newer programs use identifiers known as handles to refer to files. Each time a file is opened, a 16-bit binary value is assigned to it. The handle is then used to refer to the file for reading and writing. Handles make it easy to have many files open at once. DOS maintains a data area for each one, relieving the application program of the task. In addition, DOS provides the following standard handles for input and output to the console.

- 0 - Standard Input
- 1 - Standard Output
- 2 - Standard Error
- 3 - Standard Auxiliary
- 4 - Standard Printer

Since these last don't require disk activity, however, RECORDER ignores them.

Understanding RECORDER

RECORDER uses two major data structures to keep track of file activity. The file table already mentioned contains the information displayed each time you run the utility. The handle table is used internally to keep track of which handles are in use. First let's look at the file table. It consists of a series of records, one for each file. Each record is 20 bytes long and contains the information as shown in the table 'RECORDER Record Format'.

To ensure that filenames will be matched correctly, they must always be stored in exactly the same format. All characters are converted to uppercase and all embedded spaces are removed. In addition, any names with less than the full eight letters are padded with spaces. The file extension is treated similarly. By following this rule, names such as 'Data.Dat' and 'DATA.DAT' will be matched.

To facilitate entering new names in the table, a pointer is used to mark the most recent entry. This pointer is advanced to the next record each time a name is added. When the table fills, the pointer is set back to the first entry. Additional

Recorder Record Format

Byte	Function
0-7	Filename (right justified and padded with blanks)
8-10	Extension (left justified and padded with blanks)
11	Byte, used for sorting the table
12-13	Word, integer for total column
14-15	Word, integer for read column
16-17	Word, integer for write column
18-19	Word, integer for EXEC column

RECORDER stores the information needed to track each file in a 20-byte field arranged as shown.

HELP FOR ALL PROGRAMMERS

You can now create sophisticated applications **FAST** with our compilers, database and windowing libraries, editors and tools.

Convert your dBASE programs to C with **dBx** and watch them run like lightning under MS-DOS, Unix, VMS etc.

PRODUCTIVITY

entries can then be made by bumping an entry that has a total of only one. When every entry has a total of two or more, the table is considered saturated and no more entries can be made. This algorithm prevents a new file entry from bumping out an older entry that has already accumulated a high total. At the same time, the oldest entries with only one access are the first to go as new files are added.

The second data structure is the handle table. Its purpose is not so obvious. Recall that when handles are used to access files, the file's name is specified only when it is created or opened. The handle table provides the logical relationship between handles and filenames.

Each time a new file is encountered, its name is entered into the file table and its corresponding handle is put in the handle table. The handle table contains two words for each entry: the 16-bit handle and a pointer to the matching record in the file table. Whenever a handle is referenced, you simply look it up in the handle table to determine the corresponding filename. You then increment the appropriate columns in the matching record of the file table.

When the file is closed, its entry is deleted from the handle table. Up to 50 handles can be accommodated at any one time, which is more than any program would normally use. A pointer in the handle table is used to mark the latest entry, and entries are made sequentially in a first-in, last-out manner.

This simple scheme has one additional refinement. It would be possible for several programs to execute concurrent-

'Not all read and write requests require accessing the disk. Many can be handled by DOS's buffers.'

ly. The print command is an example of this. Each program could have handles open with the same 16-bit identifiers but different names, and RECORDER must be able to distinguish between them. To do this, each handle is encoded by adding the current program segment prefix (PSP) to it before it is inserted into the table. The current PSP is obtained by

using the undocumented DOS function call 51h. Thus, even in this situation, each handle of each process can be uniquely identified.

Snooping around INT 21h

Like most resident programs, RECORDER helps itself to the interrupt vector table. An integral part of the Intel family of processors, this important table holds the locations of the most-critical system routines. During RECORDER's installation, the interrupt 21h vector is set to the procedure NEWINT21, which maintains the utility's two internal tables. Each time it is called, it does its own work and then makes a far call to the address that was found in the original interrupt table. This technique ensures that RECORDER remains transparent to the operating system.

The first step in NEWINT21 is checking its busy flag. BUSY_FLAG is set each time a function is intercepted and cleared when it completes. NEWINT21 needs local memory to store function parameters, so it can't handle more than one function at a time. If a recursive call is made, it must be ignored by jumping directly to the original DOS vector. Since

PRODUCTIVITY

most DOS functions are nonreentrant, this bypass is seldom required. Because of this limitation, however, RECORDER may fail to include in its list all the files accessed by such background processes as the PRINT command.

The next step is to weed out irrelevant function calls. Functions numbered below 0Fh and above 44h don't involve files and are always allowed to pass undisturbed. In addition, function 31h (TSR) is not intercepted. Another special case is function 4Bh (EXEC), and it's worth explaining how it works.

Each time you run a .COM or an .EXE program, the EXEC function call is used to load the program into memory and begin its execution. Before this is allowed to happen, RECORDER notes the file's name. This is easily located since the protocol for EXEC specifies that the DS:DX register pair points to it. The procedure ENTER_FILENAME parses the name and searches the file table for it.

The EXEC and total columns of the file table must then be incremented. The base plus displacement addressing mode is used to find these words. The base address for the record is returned by ENTER_FILENAME in register SI. The appropriate displacements are 12

for the total and 18 for the EXEC column. After incrementing these two words, the EXEC function is allowed to proceed. The busy flag is cleared and a far jump is made to the original DOS interrupt vector.

If by chance the table has reached saturation, ENTER_FILENAME returns with the carry flag set to indicate the error. When this happens the increment instructions are skipped and the function is simply allowed to proceed.

The busy flag is set and register AX is stored when file functions are performed. AX contains the function code that we'll need later. Next, we make a far call to DOS to process the request. When DOS finishes its job, we first examine the carry flag to determine whether the function completed successfully. If an error occurred, DOS return with CF=1. Since there is no point in recording errors, we restore the stack and just return. Otherwise, a series of conditional jumps is used to sort out the various functions.

Functions of the FCB variety are categorised at this time as either a read or a write. As far as we're concerned, the only difference among FCB functions is which columns of the file table will be af-

fected. Register BX is set to the appropriate displacement of the column to be modified. With these FCB functions, DS:DX points to a control block containing the file name. Again ENTER_FILENAME is called to locate this name in the file table (or, if necessary, to add it).

The number of disk operations can then be added to the correct columns. Remember, we put the column displacement in BX (either 14 or 16). The offset of the correct file table record is now in register SI. These base and index registers are combined to form the effective address for the appropriate column. Naturally, the totals column must also be increased by the same amount. To access this column, a displacement of 12 is used. Lastly, all registers that were modified are restored, and a far return instruction passes control to the requesting program.

Things get a little more difficult when the handle functions are used. These functions are divided into three classes: those that read, those that write, and those that require a new entry in the handle table. Reads and writes are processed similarly to the FCB functions. The main difference here is simply how

CM100 Powermenu — Create your own menu, providing easy access to any programs on your PC.

CM101 Intelli-Trieve — Performs weighted retrieval by comparing each record in a database to user-defined selection criteria, and producing a copy of the database with the records arranged in descending order of acceptability.

CM102 EZ-Forms — Using a menu driven design process, you can create new forms or modify existing ones to suit your needs.

CM103 Qmodem — Enables you to use its command language for automating your use of bulletin boards or commercial service.

CM104 PC Prompt — You will never forget the right format for entering a Dos command. The right format is shown on the screen as you type the command, and additional help is available by pressing a key.

CM105 PC-Deskteam — It includes alarm clock, calculator, calendar, selected Dos commands, notepad, phone dialer, printer control, typewriter mode and a handy ASCII chart. These programs are loaded into your computer's memory, enabling you to use any of them by pressing alt-M key.

CM106 Word Processing for Children — Using graphics, it offers children a bright and friendly environment. It features easy to understand menus, automatic word wrap, and extra large characters for little people.

CM107 Origami — Teaches you the ancient art of paper folding.

CM108 Arcade Games Collection — An assortment of the finest "arcade type" games including Scramble and Donkey Kong.

CM109 ImagePrint — Allows you to produce high quality print on your dot matrix printer.

CM110 ProComm — Professional communications program that allows you to go to Dos without terminating. Includes some word processing ability and programmable functions which allow you to automate your communication need.

CM111 Side Writer — Your report won't fit into a page, so print it sideways with unlimited print width. Spreadsheet columns can be printed in one continuous page.

CM112 PC-Outline — Helps you to think better, by organising and rearranging your thoughts into different categories. It has auto-numbering and auto-indent.

CM113 PC-Style — Write so others can understand you. This program will analyse your writing and determine its readability.

CM114 Marooned Again — Marooned Again is a text adventure game.

CM115 Sage Calendar — Imagine an electronic desk calendar that allows you to create memos, store addresses or record events.

CM116 Disk Tool — Very handy for editing any part of any disk file using a handy windowed hex or ASCII dump of the file onto the screen.

CM117 PC-Stock — Helps you to analyse stock trends. Easy to use menu driven system.

CM118 Xanadu — A collection of very useful programs. Quickrt speeds up your screen to turbo mode. Sort your directory, displaying different colour based on file extension. PCSTAT displays disk/ram statistics. Sfnd finds files fast.

CM119 Basic Games — Various games in basic including Aardvark/Bowling/Keno/Monopoly/Spacewar and many more.

How the CHOICE MARKETING SOFTWARE CLUB works:

You'll receive your choice of any 3 programs on this page for only \$2.99 (plus \$3 shipping & handling) after your membership is accepted. We reserve the right to reject any application. However, once accepted as a member, you may examine the programs in your own home and, if not completely satisfied, return them within 10 days. Your membership will be cancelled and you'll owe nothing. About every 4 weeks (14 times a year), we'll send you the Club's bulletin, **PD SOFT**, describing the 2 coming selections and a variety of alternative choices. If you want the 2 selections, you need do nothing; they'll be shipped automatically. If you don't want a selection, or prefer an alternative or no software at all, just fill out the convenient form always provided and return it to us by the date specified. We allow you at least 10 days for making the decision. If you do not receive the form in time to respond within 10 days,

and receive an unwanted selection, you may return it at our expense. As a member you need buy only 4 programs at regular low Club prices during the coming year. You may resign any time thereafter or continue to enjoy club benefits as long as you wish. Both selections will cost \$10.00 each. The Club offers more than 800 public domain and shareware to choose from. A shipping and handling charge of \$3.00 is added to all shipments.

Send no money now, but do mail the coupon today.

Will it work on my computer?

These programs will work on IBM-PC and compatible machines with 5¼" disk drive. Other computers such as NEC APC III will require the Software Library Extension Card to use these programs. If you require programs in a 3½" diskette, a surcharge of \$10.00 is required for this offer due to high cost of 3½" diskettes. Your monthly selections will then cost \$13.00.

What is User Supported Software?

Some of the software is distributed under the user supported software concept. What this means is that you can obtain the software for a nominal fee, and if you like it you are encouraged to send a donation to the author, usually between twenty and one hundred dollars. It's a case of you pay if you like it. If it is not to your liking you may still keep the software. The instruction manual comes with the diskette and is printed out by the user.

Mail to: **FREE POST A13**
CHOICE MARKETING SOFTWARE CLUB
Dept. APC-588
PO Box 648, Gosnells WA 6110

Yes! Please accept my application for membership in the **Choice Marketing Software Club**. Send me the 3 programs whose numbers I have indicated in the boxes below plus my **FREE** membership, for only \$2.99 plus \$3.00 shipping and handling. I agree to the Club Plan as described in this ad. I will take 4 more programs at regular low Club prices in the coming year and may resign at any time thereafter.

I wish to receive the 3 selections marked in the boxes provided:

PRODUCTIVITY

the correct record of the file table is located.

Each time a file is opened or created, it must be added not only to the file table but to the handle table as well. To do this, the name is obtained from the DS:DX pointer. A search is made of the file table to determine whether the name is already there.

If not, it is entered and the four corresponding columns (totals, reads, writes, and EXECs) are zeroed out. Next, a new entry is made in the handle table. This handle table entry will provide the relationship between the handle and file table record. Before entering the new handle, however, it is first encoded by adding the PSP of the calling program. With the new table entries made, the number of disk interrupts is added to the read and total columns.

When RECORDER is reading or writing from a file, only the handle is specified. The handle table must be consulted to determine the file's name. As mentioned earlier, the caller's PSP is obtained and added to the handle. Then the handle table is searched for this entry. When a match is found, the corresponding file table entry can be retrieved. From here on, it's treated the

same as an FCB function. Handles with numbers lower than five (the 'standard' handles) are not considered.

When a handle is closed, it is treated like a write, with one exception. The

'RECORDER uses two data structures to track file activity: the file table and the handle table.'

handle table entry is zeroed to prevent it from incorrectly matching a later read or write.

Parsing filenames

I've mentioned the procedure ENTER_FILENAME several times. Its job is to search the file table for the filename being used by the current function. The current file is passed to it by the DS:DX register pair. On return, it sets register SI to the matching entry in the file table. When ENTER_FILENAME encounters a new file (one not yet in the table), it attempts to add it.

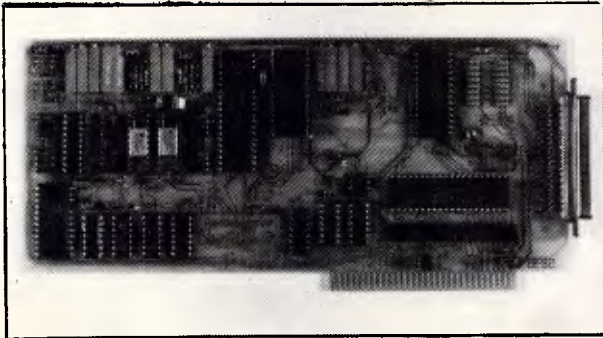

Should the table be full, the procedure returns with the carry flag set to indicate the full condition.

The interesting thing about this routine is that it can work with either FCBs or with the newer handle type of function. While the basic principles are the same, FCBs pass the name differently from the handle functions. To handle the difference, there are two parsing routines. FCBs use the routine PARSE_FCB, while handles use PARSE_STRING. How does ENTER_FILENAME know which one to use? The answer is easy: the address of the correct one is passed to it in register SI.

These two parsing routines transfer the name into a temporary holding area in which any missing letters are replaced with spaces and all letters are converted to uppercase. At the same time, any drive and path information that may have been included is stripped off.

The current file is then compared against each entry in the table. The string compare instruction, with a repeat count of 11, makes this quick and easy. If a match is found, the appropriate location is returned. Otherwise, the table is again searched for an empty slot.

DOSMATE

DOSMATE — The \$95 program that's almost a DOS manual on a disk!

Just about every complex computer program on the market today comes with its own help system. But, until now, DOS itself has had no help and yet it is probably the most complicated program of all!

Look at these features in the all new DOSMATE

**FIRST
TIME IN
AUSTRALIA!**

- Instant on line help
- Simple plain English reference
- Only uses 57Kb
- RAM Resident
- Covers DOS 2.0 to 3.3
- Runs with Sidekick and other memory resident programs
- 50,000 words of reference
- Ideal backup to training

ALL HARDWARE IS COVERED BY A 12 MONTH WARRANTY ON LABOUR & PARTS.

Computer dealers, having trouble servicing your machines? Yes, then give "MICRON", a call and let us take thge headaches out of your warranty.

This time the search is begun with the last filename entered. We'll be looking for an entry with a value of one or less in the totals column. If there aren't any left, we mark the table as saturated and return with the carry flag set. If space is available, the new name is copied from its temporary holding area to the table. The four columns (total, read, write, EXEC) are then set to zero. Lastly, the pointer to the last file entered is set to this location.

Counting sectors

Not all read and write requests require accessing the disk. DOS maintains internal buffers that hold the sectors most recently used, and many small I/O requests can be handled by the buffers alone. This buffered I/O is lightning fast compared to the time required for the drive head to reach the correct sectors. RECORDER is intended to reflect only the time required for disk operation. To accurately meter this, a count of the number of disk interrupts is maintained. A function may require zero, one, or many disk operations depending on the amount of data being transferred. After each function, the count is added to the appropriate columns of the file table.

The counter intercepts the BIOS disk interrupt. Whenever DOS needs to do physical I/O, it delegates that task to the basic input/output system, which is located in read-only memory (ROM-BIOS). The disk interface is provided by interrupt 13h. RECORDER steals this vector and points it to the procedure NEWINT13. Thus, when a disk is accessed, the counter BIOS_IO_COUNT is incremented. Each interrupt can handle anywhere from one sector to an entire track. Interrupt 13h provides functions other than reading and writing. Two of the other functions (formatting a track and resetting the controller) are never counted. The final function is used to verify the integrity of the disk data. If you've set VERIFY=ON, this process will require additional disk accesses, which RECORDER faithfully counts.

Since only devices that use interrupt 13h will affect the counter, some storage devices are neglected. For example, the Bernoulli box uses its own device driver instead of interrupt 13h. Similarly, most RAMdisk software doesn't issue interrupt 13h, so virtual disks are also ignored.

The information gathered by RECORDER would be useless if you couldn't see it. Converting binary encoded data to a readable format is so common, most people take it for granted. But it doesn't happen by itself. It

involves finding the table, sorting it, and displaying the names with the sector information.

Each time RECORDER is run from the command line, it first searches through the computer's memory for the program's copyright notice (a hoary technique, but effective). If it's not present, then the program hasn't been loaded yet. In this case the initialisation routine takes over and no display is needed. If the copyright notice is found, then the program is already installed, and the existing table is retrieved and displayed.

The usual method of sorting a table involves rearranging the entries from highest to lowest. But sorting the file table is different. The order of the entries must not be changed, since they are to be kept in a chronological order. Instead, a search is made for the entry with the highest total and that file is displayed. This entry is then marked as completed and the next highest total is sought. This loop is completed until all entries get written out. If you're wondering how files are marked as complete, the answer lies in the 11th byte of the table entry. This byte is initially cleared. As each file is displayed the byte is set to one, indicating the file should be excluded from subsequent searches.

Copying the filename to the screen is fairly straightforward. Notice that I've used DOS output services, so redirection of output will work. Although DOS output is somewhat slower than more direct methods, its versatility makes it worth the wait in this case. Converting the numbers for each column to character data is done by the procedure NUMBER_OUT.

It first outputs two spaces to separate the columns. Next, the simple algorithm of dividing by 10,000, 1000, 100, etc, is used to isolate each digit. The result of each division is converted to ASCII by adding 30h. The character is then displayed to the standard output device. Leading zeros are suppressed by using register CX to indicate when the first nonzero digit is encountered. As long as CX is zero, any zero digits are displayed as spaces.

RECORDER by itself can't do much for your system. But teamed with RAM-disk software, a disk organiser, and your careful scrutiny, it can squeeze that extra ounce of performance from your system. And what can be more cost effective than making the most of your existing equipment? You'll also get the satisfaction of knowing your hardware is being used to its full potential.

HOTTM

VERSION 4

is hotter than Hot!

HOT is a complete set of advanced tools for creating, maintaining and distributing powerful, professional turnkey systems — a MUST for every VAR, VAD, System Integrator, or MIS Director.

HOT Help Provides Context-sensitive Help for All HOT Functions

CRT Saver Protects Your Screen

With HOT, you can produce versatile, customized environments for individual clients or corporate departments.

Included with HOT — 2 FREE HOT RUNTIME MODULES!

HOT is Totally Flexible

- Set up a single menu or a chain of menus and submenus
- Link together an unlimited number of programs or menus
- Develop menus to run with a specific application program
- Create context-sensitive help screens for any application
- Create tutorials or simple interactive program simulations
- Select from a dazzling array of colour and graphic capabilities
- Choose from over 40 directives in HOT's extensive command language

HOT Perfects DOS and Increases User Efficiency

With HOT, you can make it simple for users to:

- Execute, complicated DOS commands at the touch of a single keystroke
- Run macros to automate repetitive tasks within applications
- Load programs or run batch files

HOT Provides Complete Control

- Enhance MIS control of workstation processing
- Password-protect every facet of operation
- Maintain a log of programs run during the day/time spent

HOT Benefits Your Clients

- Increased computer productivity
- Increased user confidence and satisfaction
- Simpler program operation
- Reduced keyboard entry errors

"HOT's menu management capability is the most thorough we've seen, letting you design menus with both substance and style."

INFOWORLD

"A superlative menu-management system"

— John Walkenbach, INFOWORLD

CHEF includes an easy-to-use HOT & DOS Command Editor

You can build menus that:

- Invoke any DOS command
- Feed keystrokes into applications
- Call up other menus
- Display help text
- Test to see if a file is present
- Send commands to a printer
- Set, test, and edit 28 variables

HOT's Command Shell gives fast access to a DOS-like Command Line.

Provides the DOS prompt while working within the menu environment.

1WordTM is a powerful, easy-to-use Text Editor.

Design, edit and recompile new files, re-use menus for multiple clients.

File FinderTM is an amazing timesaver.

Display a graphic tree of all directories and files on all disks.

Hot's DOS & System Utilities make it easy to execute DOS commands.

- Enjoy instant access to all DOS functions
- Eliminate the need to remember dozens of lengthy commands.
- Reduce errors in the use of common DOS Utilities.

HOT BUILD is a built-in alternative to cooking up menus from scratch.

Pop-Up Calculator is an electronic calculator for performing simple numerical tasks.

Pop-Up Datebook is an electronic scheduler.

Pop-Up Calendar lets you scroll around in time.

FOR ONLY

R.R.P.

TAS-PlusTM is the *your* Accounting Solution!

As your business grows, it changes. Yet most off-the-shelf software is rigidly fixed. TAS-Plus grows with you.

TAS BOOKS

The ideal entry level accounting for small business.

*GENERAL LEDGER

Maintain current, budget and 2 years past. Print financial statements at any time. Post and reclose prior periods at any time.

*ACCOUNTS RECEIVABLE AND INVOICING

Enter new customer during invoicing. Apply payment to individual invoices or automatically. Each invoice line can have its own discount.

*ACCOUNTS PAYABLE/ORDERING

Tracks current purchases and YTD totals. Select invoices to pay manually or automatically. Enter new vendor at time of purchase.

*INVENTORY LEDGER

Handles regular and non-inventory items. Accumulates gross and net sales, COGS and GPM for each item. Tracks re-order level and amount. All this, and more, in a fully integrated, simple to use package. Only \$699 RRP

NEED MORE POWER? MOVE UP TO

TAS MODIFIABLE/ ADVANCED ACCOUNTING

*GENERAL LEDGER

Multi Department facility. Can consolidate departments into one report. Post and reclose prior periods or years at any time. Maintain up to five separate cheque accounts.

*ACCOUNTS PAYABLE

Tracks purchases MTD & YTD totals. Disburses payables to up to 10 G/L accounts.

*ACCOUNTS RECEIVABLE

Allows for pre-payments.

Automatic recurring monthly charges to customer accounts. Credit limit check at time of invoicing.

*INVENTORY CONTROL

Handles regular, non, and Serial No. Inventory. Tracks re-order level and amount, outstanding purchase orders and back orders. Maintains multiple profit centres and salesmen.

*SALES ORDER ENTRY

Enter new customer at time of order entry. Automatically looks up customer, shipping instructions, tax and credit terms. Manual override. Up to 94 Lines per order. Mix taxable and non-taxable items on same order. Discount by line.

*PURCHASE ORDER ENTRY

Automatically looks up vendor and credit terms. Manual override. Prints manufacturers code on orders. Receive entire order or individual line items into inventory. Allows for over/under shipment and price change at time of receipt.

*PAYROLL

Handles wage and salaried employees. Up to 10 pay rates per employee per pay. Detailed coinage analysis. Pay by cash/cheque/bank credit or combination. Payroll is also available as a standalone package.

- All TAS Accounting Solutions are written in the powerful 4GL TAS - Plus for power and flexibility. Tas-Plus and Source Code are included in the price of all accounting solutions so you can modify the programs to suit your business.
- And TAS-Plus provides a powerful programming environment for a host of other applications.
- Don't be locked into somebody else's solution. Try TAS-Plus Accounting Solutions for 30 days with the protection of our money back guarantee. (Less \$25 handling fee)

Continued from page 59

Thus, interleaved burst access with practical SRAM could take just one wait state to set up the burst, then zero wait states within it. Simulating this combination yields 35,760 Dhrystones per second and 18.67 mips (85 per cent of peak). The use of the instruction burst-mode configuration improves performance by 21 per cent.

The simulator output also shows that the CPU pipeline had 25.3 per cent idle time, split mainly into 10.2 per cent instruction-fetch waits and 12.3 per cent data-transaction waits.

There was also a 1.8 per cent 'load/load' transaction wait due to the wait states on the data RAM, and to CPU pipeline holds when switching from a write to a read cycle.

Compared to peak performance, the interleaved burst-instruction memory with real SRAM gives only 2.8 per cent more instruction latency than perfect zero-wait-state memory using this Dhrystone code. Thus, little is to be gained from further improvements (or complications) to the instruction memory design.

Pipelining

In pipelining, the address of the next instruction is placed on the address bus prior to the completion of the current cycle. External hardware latches this address, freeing the bus for the other channel (either the instruction bus or the data bus). Performance improvement is minimal, two per cent to six per cent typically, and can be easily examined with the simulator.

The Am29000 chip set

To quote from the Am29000 user's manual, "The Am29000 Streamlined Instruction Processor is the result of a design philosophy which recognises that processor performance must be considered in the light of the processor's hardware and software environment." Thus, the Am29000 draws on system concepts not only from early RISC technology, but also from the bit-slice and interface technologies that Advanced Micro Devices has pioneered.

The Am29000 has 192 internal general-purpose registers and a full 32-bit architecture, and it currently operates with a 25MHz clock, giving a 40ns cycle time (the most ambitious for any of the currently released RISC chip sets). Instructions are of three-address architecture; that is, of the form 'ADD Ra,Rb,Rc, where the source operand in register a is added to the operand in register b, and the result placed in register c.

The CPU includes demand-paged memory management (on-chip), a timer, and, like the MC88000, master/slave redundancy checking.

For floating-point operations, the Am29027 Arithmetic Accelerator supports not only the IEEE floating-point data formats but also the DEC D,F,G, and IBM 370 formats. The Am29027 has an 8-deep 64-bit register file that can be programmed in flow-through (for scalar computations) or pipelined (for vector operations) mode.

The floating-point speed predicted for the Am29027 is exceptional. AMD predicts a LINPACK rating of three million floating-point operations per second (MFLOPS), single precision, before the end of 1988. Although three MFLOPS represents a tenfold speed increase over 1987's technology, the MC88000 is also expected to deliver this order of performance. For reference, the CRAY-1S supercomputer achieves 13 MFLOPS.

The Am29000 chip set is rounded out with the Am29041 Data Transfer (DMA) Controller. It attaches the high-performance local data bus of the Am29000 to asynchronous peripherals and includes DMA buffering to more effectively utilise the Am29000's burst-transfer modes.

SCRAM is becoming prominent as the memory of choice for low-cost, high-speed computer systems. Even the 80386 clone on which I am writing this article uses it.

SCRAM is just like normal DRAM with RAS and column-address strobe (CAS) cycles, except that the column address

is not latched on the falling edge of CAS, but can be changed while RAS and CAS are held low. In this mode, the RAM looks just like a 256kbit (64kbitx4) SRAM. Thus, for minor address changes within the same row of the RAM array, SCRAM has the fast access times of SRAM (typically 40 to 55ns).

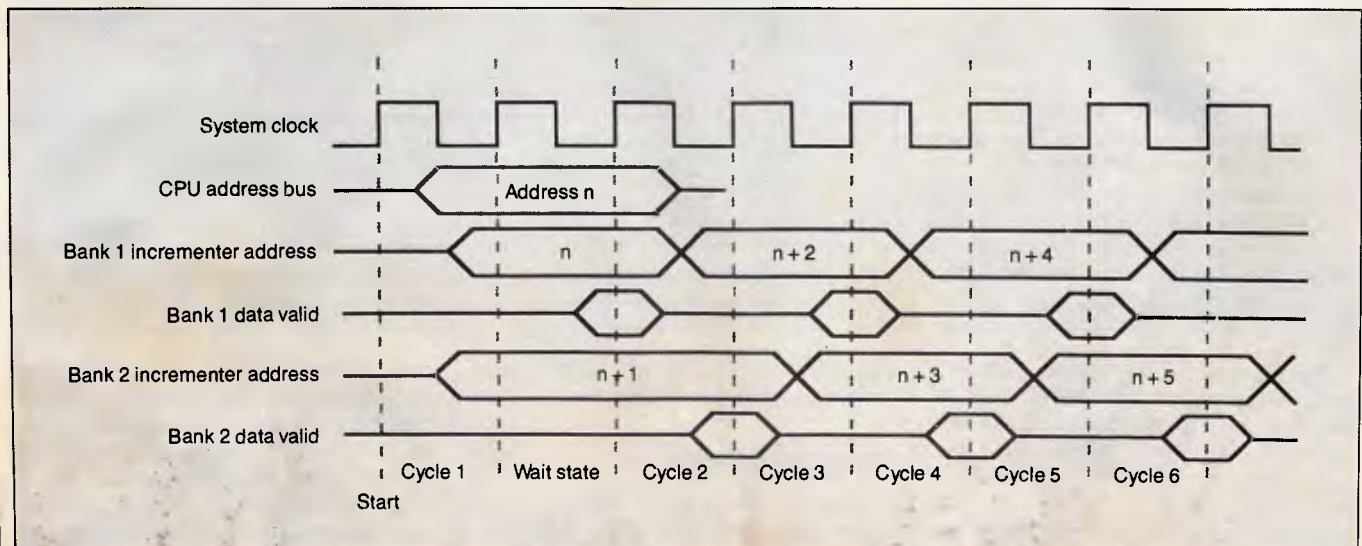

Fig 5 The timing for an interleaved instruction-burst access. Notice that the access switches back and forth between the two data banks. This process avoids the wait between accesses on a single bank

The MC88000 RISC

The MC88000 is the first RISC processor from Motorola. Although the part number might seem to indicate some relationship with the MC68000 family of complex-instruction-set computer (CISC) processors, nothing could be further from the truth. The MC88000 shares no common instructions, architecture, or pin-outs with its CISC predecessors.

Like the Am29000, instruction and data memories are accessed through separate ports. Unlike the Am29000, however, the MC88000 has two completely separate address buses for the two memory spaces, thereby preventing the possibility of contentions. As a result of the 32 extra interface pins, the MC88000 comes in a larger pin-grid-array package, totalling 182 pins and measuring 1.8in square. It supports both big-endian and little-endian byte orderings. Fig A shows a block diagram of the system.

The MC88000 has 32 general-purpose 32-bit registers. It uses register-to-register addressing for all data manipulation instructions. Registers are written to or read from memory only by load and store operations.

The internal floating-point capability is a unique feature of the MC88000. The floating-point unit is actually organised as separate adder and multiplier units that can operate concurrently.

Integrated within the MC88000 family are the MC88200 cache/memory management units (CMMUs); there is one for use with each of the instruction and data spaces. The cache is 16k of 4-way set-associative SRAM that can achieve one-cycle pipelined access on cache hits and can be used in write-through or write-back modes.

It is not mandatory to use these CMMUs, although the level of technology implemented in them certainly makes their use attractive. For interfacing to main memory, they use the Motorola M-Bus, a multiplexed, multi-master protocol. A single read cycle on

the M-Bus interface takes two CPU clock cycles. Although the burst-mode read improves the data transfer rate to four words every five cycles, burst mode is unlikely to be of much use in data memory applications. Nevertheless, the M-Bus is an excellent compromise between the requirements of a bused memory system and the performance of a high-speed, closely coupled memory system.

By contrast, the MC88000 CPU P-Bus timings make it quite easy to operate high-speed SRAM with no wait states.

The P-Bus is a pipelined protocol, with the reply signals not being required until the cycle subsequent to the access. This gives a peak transfer rate of 80Mbytes per second at the 20MHz CPU clock rate of the current MC88000 family. The worst-case access time is $50 + 5 \cdot 5 = 50\text{ns}$ (no buffers) from address valid to data setup. No Dhrystone performance figures are available at this time.

Motorola says that the MC88000 is scheduled for production in the first quarter of 1989.

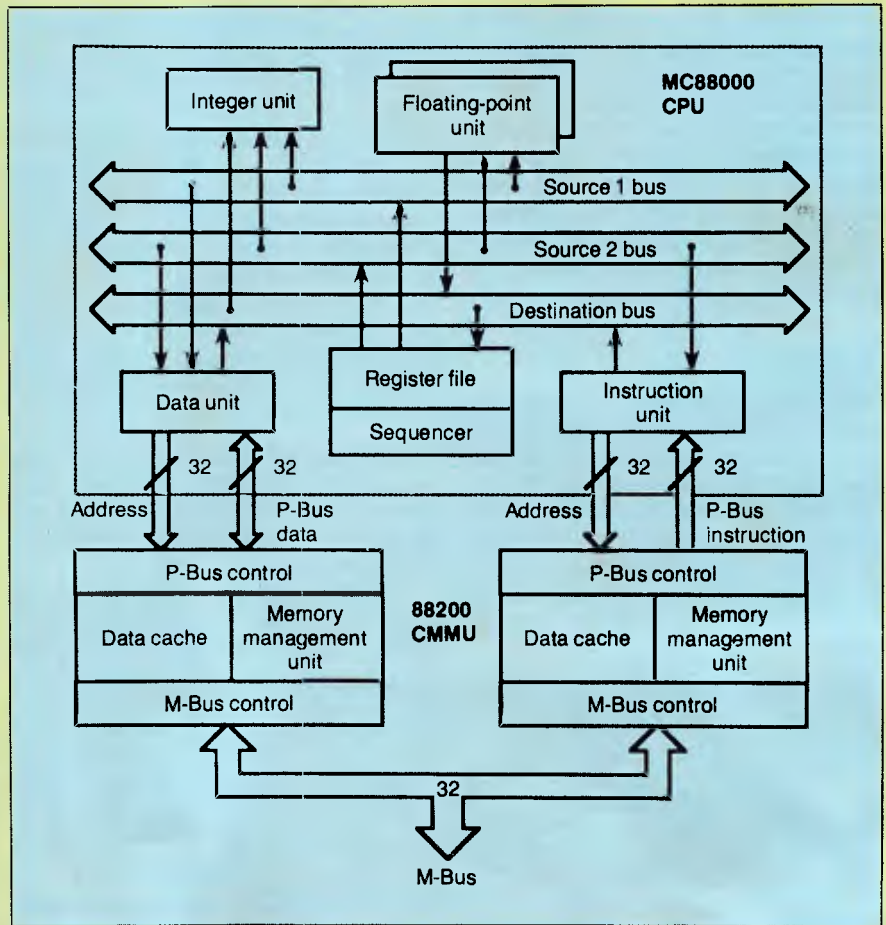

Fig A The Motorola MC88000 RISC processor and support chip block diagram

There is a problem, however. When a new row address needs to be latched, the RAS precharge interval plus a normal access time must elapse. This typically leads to extra wait states at the beginning of a burst sequence. The simulator has been designed to estimate additional SCRAM penalties.

Since the instruction stream only rarely (less than 10 per cent of the time) goes outside the current page, interleaved

burst-mode SCRAM instruction memories can be very effective.

It really works

I recently designed a Macintosh II coprocessor board using the Am29000. It is typical of the designs that you can achieve using these memory interface architectures.

Possibly the most important factor you

need to determine in a design is how much space you have available to hold it. This is usually the prime determining factor in choosing between SRAM and SCRAM and between externally bused and closely coupled (nonbused) systems.

Deciding to go with an external bus (eg, the VME bus) for your memory interface immediately sets an upper bound on the performance of memory-intensive applications. Buses have considerable

DID YOU KNOW???

*That PACTRONICS has the best range of competitively priced business software and accessories.
Our company policy is;*

"BEST QUALITY AT BEST PRICE"

DID YOU KNOW???

*PACTRONICS has just released TOP COPY PLUS, the world's leading "POP-UP" word processor.
Just look at these features:*

- Can be used as a pop-up, like Sidekick.*
- All commands can be called from a central menu.*
- Simple, elegant layout is ideal for both novice and expert.*
- Can draw boxes and lines on screen.*
- Comprehensive, yet easy to follow manual.*

AND DID YOU KNOW???

It also has these extra features:

- SCREEN IMPORT when in pop-up mode allows you to grab the foreground screen and drop it into your document.*
- 70,000 ENGLISH word dictionary and 10,000 word user dictionary.*
- 43 line display on EGA machines.*
- Define and save different sets of keyboard macros.*

AND DID YOU KNOW???

PACTRONICS has released SNIP INTEGRATED ACCOUNTING SYSTEM for the PC. At \$699.00 R.R.P. it really is a snip, when you consider it covers Debtors, Creditors, General ledger, Invoicing, Statements, PAYROLL and more.

AND DID YOU KNOW???

SNIP's payroll module has been modified to suit Australian coinage. Also, a demonstration system is available that allows you to completely explore SNIP before you buy. It is more than a demo, it is actually a full system except you are limited to 10 Creditors, 10 Suppliers, 10 stock items etc.

AND DID YOU KNOW???

PACTRONICS has a full range of educational software for your PC. The latest release is the brilliant series of SESAME STREET learning software. This range covers puzzle solving, logic, predicting and forward planning, all with the same comfortable feel as the world acclaimed program they are modelled on.

NOW YOU KNOW!!!

overhead when they have to match 40ns cycle times. You just can't use interleaved burst mode in a bused system and achieve anywhere near the zero-wait-state performance of a closely coupled configuration, even when the bus is combined with an SRAM local cache. Thus, the necessity for a memory bus structure must be carefully balanced against the need for performance.

Conversely, there is a limit to the amount of memory that can be closely coupled to a CPU. This limit is determined not only by loading the CPU address and data outputs to capacity but also by the available space on the CPU board itself. At the moment, loading 512k of SRAM (256kbit technology) or 2Mbytes of SCRAM (1-megabit technology) to capacity would fully load each internal bus of the Am29000.

In my case, I elected to use the Macintosh NuBus for access to peripherals, keeping the memory closely coupled to the CPU. I chose SCRAM for instruction memory, but due to the performance penalty incurred by SCRAM page-miss cycles, I selected SRAM for data memory. Size considerations then led me to choose 512k of 64kbitx4 chips in both technologies. It's interesting to note

that the 512k of SRAM costs almost 10 times what the same amount of SCRAM costs.

The performance simulation shows that the penalty for using SCRAM in the instruction memory was about 10 per cent in this case. Although that may seem quite high, if you run the simulation for the same parameters using a 512-word

'The usefulness of these new memory designs is intimately interwoven with the sophistication of the software they will execute.'

page size (which is what you would get with 1-megabit SCRAMs), the penalty is only 2.3 per cent.

The usefulness of these new memory designs is intimately interwoven with the sophistication of the software they will execute. It's obvious that the early version of the MetaWare C compiler (and associated run-time libraries) that I used makes frequent branches or calls that

are not within the current page of 256kbit SCRAMs. The real performance potential of these new architectures will require further development of compiler and linker technologies. For example, placing small subroutines in-line rather than calling them makes a major difference in the performance of SCRAM-based systems.

Pushing beyond

In 1985, the performance of microcomputers rivaled that of minicomputers. When the DSI-32 achieved 1500 Dhrystones (August 1985 *Byte* magazine), it was cause for celebration; yet today's high-end personal computer is capable of much greater performance.

Today's RISC microprocessors aim their performance squarely at the supercomputer user. Consequently, they are pushing operational speeds beyond the capabilities of current computer systems.

As both hardware and software architectures change to complement the improvements in the CPUs themselves, a world of performance will open up that we couldn't even dream of just three years ago.

Has IBM made another Big Blue?

IBM may have made a very big blue by abandoning the PC standard it set back in 1981.

The installed base is vast, the software range huge, guaranteeing MS-DOS will be the major PC standard for years to come. IBM has also created the opportunity for a new Big Blue to arise: Hyundai. A \$20 billion giant committed to supporting the MS-DOS market with a range of 286-based ATs and speed switchable XT's.

Our authentic Microsoft operating system means your current PC software will run like a dream.

Our configurations cover all applications from intelligent terminals, through powerful stand-alones, to LAN file servers.

And an authoritative US computer journal finds "The Hyundai [is] functionally superior to Big Blue's box and most similar compatibles".

Small wonder then that Hyundai became the second biggest selling PC in the US in just two years.

And small wonder, in personal computers, Hyundai is destined to become the new Big Blue.

Synchronising standards

Adaptable-sync monitors answer the needs of today's diverse graphics standards while looking to the future standards.

In the world of PC computer graphics today, there is no such thing as an enduring standard, much less an endearing one. The safest claim that a vendor can put forth is that its display is the most versatile one available on the market. Many of the graphics-board manufacturers admit, however, that fixing on a single standard is like trying to freeze the electron beam that flies across the shadowmask of a monitor.

The adaptable-sync monitor provides a partial solution to the elusive PC graphics standard. These monitors not only synchronise with the existing graphics standards — the IBM Monochrome Display and Printer Adaptor, Colour Graphics Adaptor (CGA), En-

hanced Graphics Adaptor (EGA), Video Graphics Adaptor (VGA) and Professional Graphics Controller (PGC) — but they also will be able to accept signals from future graphics boards that exceed the current standards.

Earlier monitors, such as IBM's Monochrome Display and Colour Display, were designed to be used only in tandem with their associated display board. The IBM Enhanced Colour Display provided the added flexibility of allowing either the CGA or the EGA to be attached. Now, with an adaptable-sync monitor the user can change or upgrade his display system without having to buy a different monitor.

Nippon Electric Corporation (NEC) led

the way in the field with its Multisync monitor, introduced in 1985. Since then several competitors have entered the market. For this article APC examined eight of them and Table 1 compares the specifications of these monitors.

Existing standards

The IBM monochrome display adaptor has a resolution of 80 characters by 25 rows with each character being 9 by 14 dots. This gives a dot resolution of 720 by 350. The monochrome display accepts a transistor-transistor logic (TTL), digital, horizontal synchronisation pulse at 18.432kHz with a 50Hz refresh rate. The signals from the display adaptor are

Monitor	Horizontal sync Frequency (kHz)	Vertical sync Frequency (Hz)	Maximum horizontal resolution (pixels)	Maximum vertical resolution (pixels)	Shadow-mask pitch	Price
Logitech Autosync TE5155	15.5 — 35	45 — 80	800	560	0.31	\$1354
Eizo Flexscan 8060S	15.7 — 35	50 — 80	820	620	0.28	\$1423
NEC Multisync XL	21.8 — 50	50 — 80	1024	768	0.31	\$5500
Princeton Ultrasync	N/A — 35	45 — 120	800	600		\$1170
Sony Multiscan CPD 1402E	15 — 34	50 — 100	900	560	0.26	\$2088
Thompson Ultrascan 4375M	15.6 — 35	45 — 75	800	560	0.31	\$1740
Teco TE5155	15.5 — 35	45 — 80	800	560	0.31	\$1272
TVM Multifunction/2 MD-11	15 — 38	47 — 75	800	600	0.31	\$1350

Table 1 The adaptable-sync monitors can accommodate the analogue signal of the VGA and digital inputs from the TTL display adaptors

CHECKOUT

the vertical sync pulse, the horizontal sync pulse, and the video pulse. The bandwidth of the monitor, the maximum dot frequency it can display, is 16.257MHz at a -3-decibel level.

The IBM CGA can display two colours from a palette of 16 at its maximum pixel resolution of 640 by 200. Its display is non-interlaced like the monochrome adaptor; RGBI signals are sent as TTL digital signals along with the horizontal and vertical sync pulses. The refresh rate on the CGA is 60Hz; the horizontal sync frequency is 15.75kHz.

Of much higher resolution is the IBM PGC, an analogue board with a display resolution of 640 by 480 that can display 256 colours from a palette of 4096. The PGC requires a high-resolution analogue display, such as the IBM Professional Graphics Display, in which the colour signals are sent in analogue form and are translated into RGB components within the monitor itself.

This means that the monitor cannot be used with other types of display adaptors; however, the PGC does emulate the CGA, thus allowing CGA-compatible software to be run. The Professional Graphics Display has a horizontal scan frequency of 30kHz with a refresh rate of

60Hz and A bandwidth of 25MHz. Despite its high resolution and more extensive range of colours, the PGC has not gained popularity because of the high cost of the controller and monitor — over \$5000. Applications software for the PGC requires a custom device driver to use the facilities of the display system. Many CAD companies have opted to write drivers for slightly more expensive display systems that give resolutions around 1024 by 1024. These display systems then can be sold as OEM products.

The more reasonably priced EGA has emerged as the most popular standard for graphics applications, primarily because of its backward compatibility. Existing applications that run on the CGA can function without modification on the EGA, and vendors can upgrade their software to use the EGA.

The IBM EGA has a maximum resolution of 640 by 350 pixels, displaying 16 colours from a palette of 64. This requires a horizontal scan frequency of 21.8kHz and refresh rate of 50Hz. When in this 16-colour mode, the signals sent to the monitor are two red, two green, and two blue signals (RGBrgb). These colour signals, along with the horizontal

and vertical sync pulses, enable a larger range of colours to be obtained than is possible with the CGA.

The latest from IBM, the VGA, also uses a high resolution analogue colour display. Since all the hardware is bundled with PS/2s (Model 50 and above), users find themselves obliged to adopt the new standard.

Performance limits

Adaptable-sync monitors have theoretical maximum performances. Using the specifications supplied by the manufacturers provides some insight into the possible life span of these units. As an example, NEC claims its Multisync can display up to 800 pixels horizontally and 560 vertically and the Sony Multiscan monitor is specified as being able to display up to 900 by 560 pixels. This provides room for the standard to grow while still accommodating previous standards, by being able to attach either an analogue or a digital display adaptor. The new monitors allow users to take advantage of the evolving standards without knowing what the next major standard will be.

The versatility of adaptable-sync

This man isn't a computer expert, yet he chose a UNI-X CompuPak kit - and assembled it in one night!

\$862

Including tax
Valid as at 10/3/88
At this price

**WHY
NOT?**

No, he's not a genius, but he's brilliant at spotting great value. Like many of us, he's realized that a personal computer is invaluable, yet the price tag for a professional unit has always been a little beyond his reach. Until now.

Quite simply the UNI-X CompuPak kit contains all the major componentry of a top quality industry standard computer, in an unassembled form. You save the dollars and increase your knowledge, by putting it together yourself.

UNI-X also provide a National Warranty through Honeywell Ltd, a professional network of expert backup and service.

The complete Super 10 kit contains:

- ☐ **Super — 10 mother board** 640K · 256K installed, 4.77/10MHz, plus V-20 chip (very fast!)
- ☐ **Colour graphics adaptor card.**
- ☐ **Multi I/O Card**-Serial/Parallel Ports, Games Port, Clock, calendar, Floppy Controller.

- ☐ **Dual Frequency TTL Monitor** (Green or Amber) includes tilt and swivel base.
- ☐ **Top quality Japanese Disk Drive.**
- ☐ **150 watt switching power supply.**
- ☐ **High tech flip-top case.**
- ☐ **Complete set of accessories.**
- ☐ **AT style keyboard.**
- ☐ **Industry standard — runs all IBM software.**
- ☐ **Assembly manual**
- ☐ **Utility Disk.**
- ☐ **All upgrade options available.**

LOW COST IBM COMPATIBLE
SURVEY — OCTOBER 1987

...and the experts agree with his choice.

Australian Personal Computer have now proved what our customers have known for years

Processor.

NEC. The Uni-x contains a NEC V20, manufactured by Sony. This is a V20 running at 4.77MHz will outrun an 8088 running at the same clock speed. Thus a V20 running at 4.77MHz as a minimum, although the performance even on this clock rate by virtue of the V20. The Atlantis and other machines

Performance.

The Uni-x is fastest overall, providing a 50 per cent boost over the Technology Interface due to the V20.

Display.

delivered with a nice INTRA tilt/swivel screen. The other

Cost Effectiveness.

As you might expect, the do-it-yourself Uni-x comes up trumps with its low cost and relatively high performance.

Specifics.

very sensitive place. The Uni-x features a delightfully small motherboard. It has employed a VLSI component to replace the Intel 8253 timer, 8255 PPI, 8237 DMA controller and several other components. This reduced the component count and a simplified motherboard serves to reduce costs.

... see for yourself in the full Report in the October '87 issue, or ring us for a copy.

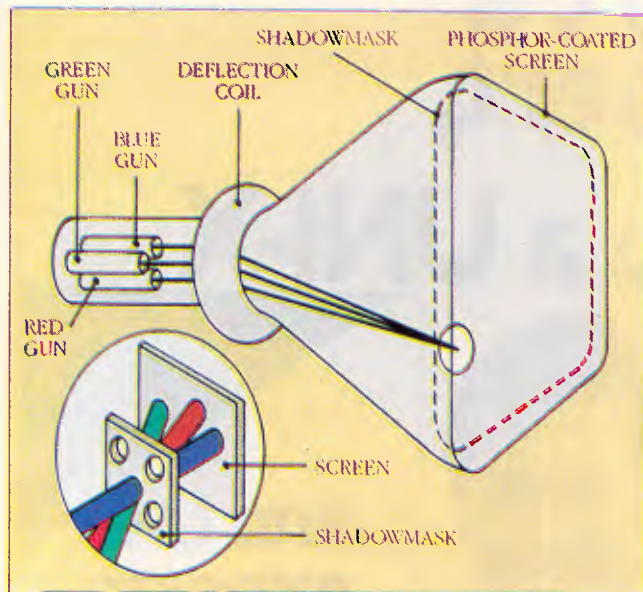

Fig 1 The three-gun CRT. The three guns at the rear of the cathode ray tube emit a beam of electrons toward the front of the tube. They converge at the shadowmask and pass through onto the screen, causing their respective phosphor dots to glow as the pixel

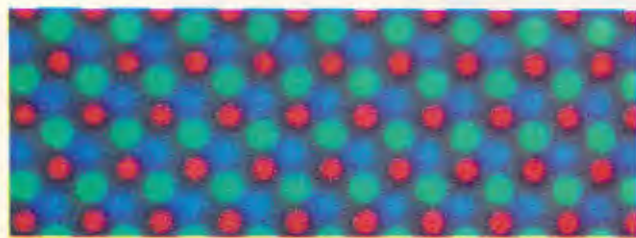

Photo 1 A triangle of three dots makes up a single pixel. The actual colour of the pixel is determined by the brightness of the combination of the three phosphor dots

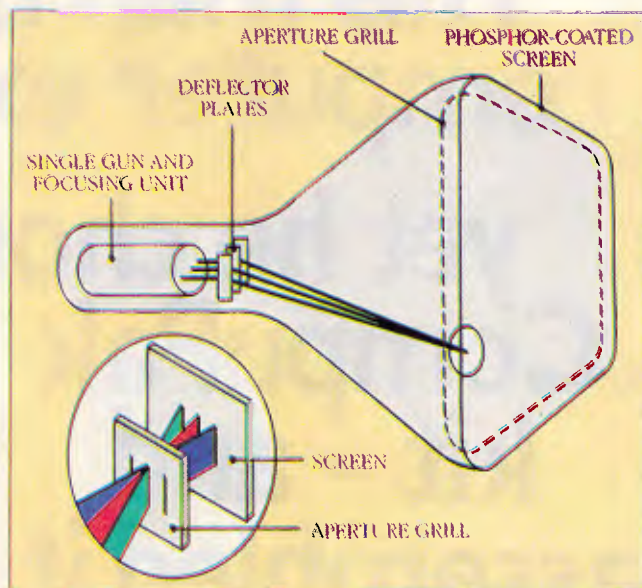

Fig 2 The Single-gun colour CRT. The single-gun assembly within the Sony Trinitron tube emits three beams of electrons side by side that make up the pixel. This design enables the convergence setting to be simpler because the three beams are on a single axis

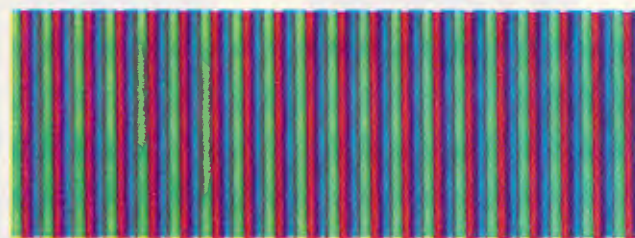

Photo 2 With a Sony aperture grill, the pixel is made up of the three slots side by side. The pitch of the Sony mask is 0.26mm

monitors can be appreciated by an understanding of their various limiting specifications. A monitor consists of a cathode ray tube (CRT) that has an electron gun in the rear. This gun transmits a beam of electrons from the rear of the tube to the front phosphor-coated screen that is seen by the user. The electron beam is moved from side to side by the deflection coil using the horizontal sync pulse and from top to bottom by the deflection coil using the vertical sync pulse.

With a colour display the operation is expanded. A CRT can have either three guns (see Fig 1), one each for the red, green, and blue signals, as with the NEC monitor; or it can have one gun, as with the famous Sony Trinitron system (see Fig 2).

For a three-gun system a beam of electrons is sent from the rear of the tube from each gun. The beam passes through a shadowmask (a precision-

drilled plate with holes) before reaching the screen. Each pixel consists of a triangle of three phosphor dots — one red, one green, and one blue (see Photo 1). The size of the pixel is sufficiently small that the human eye is tricked into seeing a colour that is a combination of the red, green, and blue components rather than the individual dots themselves. The size of the holes in the shadowmask and the pitch of the mask (the distance between adjacent holes) affect the clarity of the pixel.

In the single-gun Sony Trinitron system the pixel consists of three strips side by side as the gun transmits three beams of electrons side by side (see Photo 2). The equivalent of a shadowmask for this type of monitor is an aperture grill with vertical slots, rather than circular holes.

The signals from the monochrome display, CGA, EGA, and high-resolution EGA boards are digital. The video signals contain the on/off information about

a particular pixel that is to appear on the screen. For the monochrome display, the information is in the video pulse that is transmitted from the adaptor to the monitor. In the colour displays the red, green, and blue information for each pixel is sent individually. Once it is received by the monitor, this information is converted to analogue form and sent to the colour guns.

The video signal transmitted from the PGC and VGA are analogue; it is used more directly by the monitor. Because the display adaptor is supplying the colour information, the adaptor and monitor need to be in the tune with each other.

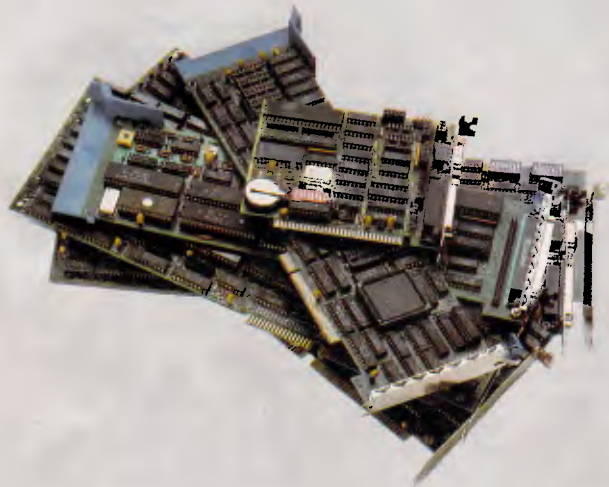

Adaptable-sync monitors do not accept just one type of input. Fig 3 shows a functional block diagram of an adaptable-sync monitor. A switch on the monitor enables the user to select either analogue or digital input. The incoming signals are synchronised and used to

Everex has the Answer

Whatever you need for your PCs, XT[™], ATs[®] or compatibles, PS/2[™] systems and Apple[®] Macintosh[™] computers, Everex has the answer. Everex designs and manufactures products to enhance the power and capability of your system.

From modems to graphics adapters and tape backup, Everex makes more than 100 products—including our popular hard disks, tape backup and memory/multifunction boards. Everex can provide the right solution—at the right price. And Everex products support the newest technologies, from OS/2[™] to EMS 4.0. We also have advanced 16 MHz/80386 and 12 MHz/80286 personal computers.

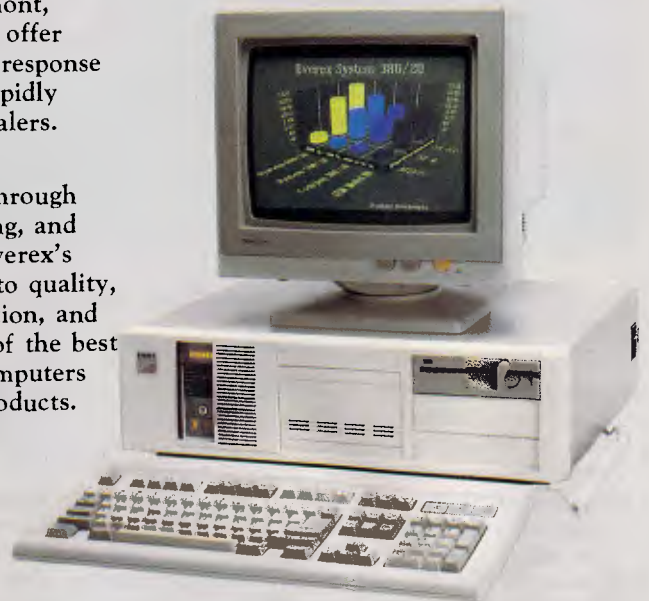

From our beginning in 1983, the people at Everex have provided quality products at affordable prices, with a commitment to personal service. Our honest, straight-forward approach has transformed Everex into a multi-hundred million dollar company employing over 1300 people worldwide.

With more than 175 engineers involved in research and development, we consistently develop the innovative PC products that you need. And because 100% of all Everex products undergo final assembly and test in our 250,000 square foot headquarters in Fremont, California, USA, we offer unparalleled quality, response and service to our rapidly growing family of dealers.

From initial design through manufacturing, testing, and after-sale support, Everex's complete dedication to quality, affordability, innovation, and service assures you of the best value in personal computers and enhancement products.

So, whatever your personal computing needs, *Everex has the answer.*

Australia Everex Systems Pty Ltd
Unit 6, 12A Mars Road, Lane Cove,
NSW 2066 Australia

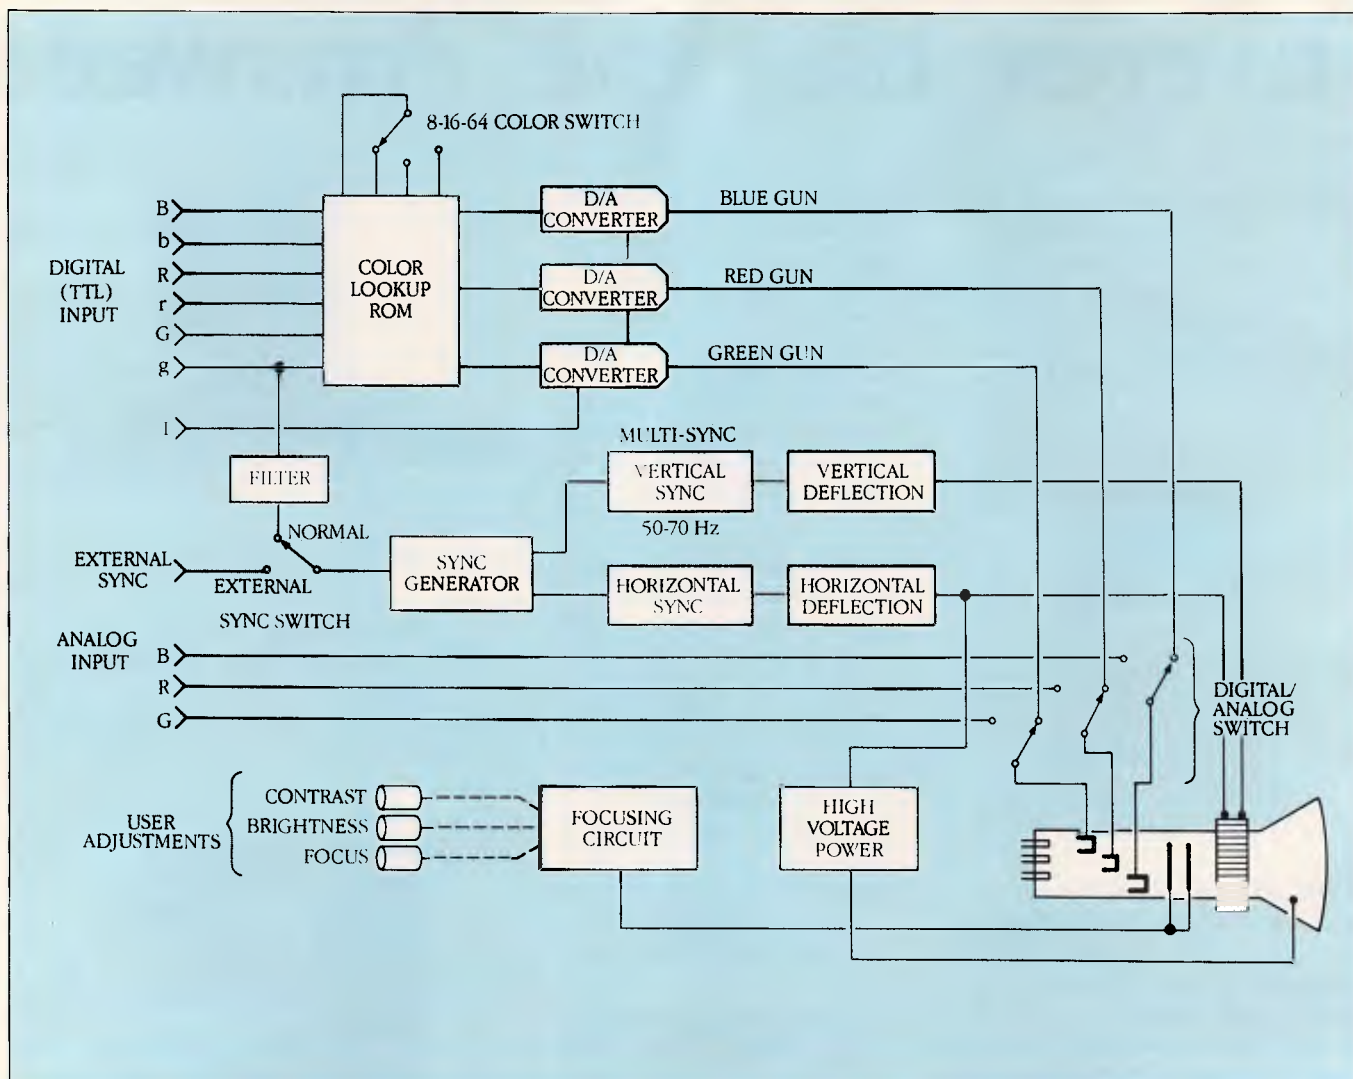

Fig 3 Functional Block Diagram. The analogue display adaptor has a separate input to the monitor. The monitors cannot be damaged by incorrect switch settings

create the display. The horizontal and vertical sync frequencies vary among adaptors. Adaptable-sync monitors can accept these variations and produce a satisfactory display with a variety of resolutions and colour ranges.

The maximum horizontal sync frequency limits the number of horizontal lines that can be displayed per second, and vertical sync frequency affects the refresh rate for the screen. The bandwidth of the monitor is the limiting factor of a display. Its value gives an indication of how many dots per second can be displayed without blurring the image. Blurring results from the colour information being fed to the guns faster than the monitor can move to the next hole in the shadowmask. For the PC market the limits for the monitor need to be translated into pixels in order to judge the highest future standard that an adaptable-sync monitor can support.

The bandwidth and the maximum horizontal and vertical sync frequencies, including the horizontal and vertical retrace times, are used to calculate the maximum number of pixels that can be displayed on a monitor.

The adaptable-sync monitors on the market translate the horizontal and vertical sync frequency limits into horizontal and vertical pixels (see Table 1). Depending on the future designs of the display-adaptor manufacturers, these numbers mean that a new graphics standard can appear on the order of 800 by 600 without requiring a new monitor.

A variety of adaptable-sync monitors is available. They each vary ergonomically and visually with the colours that they produce, but they all have similar functional specifications. Most of the monitors examined here are major contenders in this emerging market. Their individual descriptions below reveal

some of the variations among the units.

The selection of a monitor requires some experimentation before purchase. One consideration should be the monitor's particular environment, including ambient light and glare, which may affect individual requirements. The monitor must be tested with the display adaptors that are to be used with it, and the colours produced by the monitor should be examined.

The choice of monitor depends on the individual taste and needs of the end user. For CAD applications the clarity of the colours may be the most important feature to consider. In other applications, such as the use of prepared slide shows, it may be more essential to have colours that are identical to those on an IBM monitor. The colour produced on the adaptable-sync monitors varies among the different models. For example, some of the monitors display brown (which is

CHECKOUT

really intense yellow) as a true brown representation as the IBM monitors do, whereas others display it as intense yellow or a mustard colour.

The adaptable-sync monitors have several adjustment controls, such as vertical hold, horizontal hold, vertical size, and horizontal size. Not all of these are available on board-specific monitors. For example, the IBM Enhanced Colour Display has brightness and contrast controls and two vertical size controls, but no horizontal controls.

The actual size of the display window varies on an adaptable-sync monitor whenever different display adaptors are installed. However, the various monitor controls, such as the vertical size and width, can be used to adjust the picture for the particular adaptor in use. The amount of adjustment that is necessary depends on the specific monitor design and set-up as it was shipped from the manufacturer.

Most units degauss, or demagnetise, the screen during a warm reboot. This feature prevents any colour smears caused by residual magnetism that may remain from the previous display. These adaptable-sync monitors are also forgiving; they will tolerate the switches being set incorrectly without causing damage

to the unit. This characteristic is different from the earlier, board-specific models.

Additional features may be available on the individual monitors. The NEC Multisync monitor allows the display of text to be a colour that is specified by the monitor instead of by the applications software. The monitors may require separate cables for use with different

display adaptors. For example, the Sony Multiscan requires a different cable for the analogue than it does for the TTL display-adaptor boards.

DEALER ENQUIRIES WELCOME**

The Logitech Autosync TE5155 has its controls located behind a flip-open cover on the side

with a speaker, volume, brightness and contrast controls, and is an optional extra.

The 'mouse' is a great idea. The only criticism we have is its name. Everybody in the APC office was rushing past and asking how a mouse could be connected to a monitor, and then being slightly confused by the explanation, "it only says it's a mouse — it's not really a mouse." We might suggest 'hard disk controller' to be a better name, but really, it isn't one of those, either.

The monitor itself supports horizontal scanning of 15 to 8kHz with a maximum resolution of 800 by 600, with a dot pitch of 0.31mm. The unit weighs 33 pounds, and comes complete with a 27 page instruction manual covering installation, usage, specifications and a troubleshooting guide.

Logitech Autosync TE5155

This monitor has overall dimensions of 13 by 15 by 15ins and weighs 31 pounds. Its 13in screen is polished. The bezel is deep, and overhead lights throw

lowing access to contrast and brightness controls, text mode, size and positioning adjustments and width. Four mode indicator LEDs on the front panel are provided, with additional controls on the rear to select colours, manual over-ride, and TTL/analogue selection.

The Teco TE5155 and the Logitech Autosync TE5155 are actually the same monitor — we're not sure who came first, but it is a definite job of badge engineering.

The only major difference is the price — and that isn't major. The Teco version costs \$1272, while the Logitech model will cost you \$1354.

TVM Multifunction/2 MD-11

The TVM MD-11 front panel features only a single LED power indicator, accompanied by three knobs providing control over power, brightness, contrast and colour suppression. A flip top instrument recess on the top provides access to controls covering vertical and horizontal positioning, size, hold and width.

Further controls on the rear set the colour mode, and select between TTL or analogue input. A 9-pin D-shell input connector is also positioned on the rear.

Most unusually, the TVM features a 'mouse' connector next to the video input. This is not a mouse in the conven-

The second best shadowmask pitch is provided by the Eizo Flexscan 8060S, just 0.28mm

tional sense (although it does slightly look like one), but a video signal adaptor which allows you to interface the monitor to TV tuners, VCRs, video disks and cameras. The mouse comes complete

a shadow on the top edge of the screen.

All the commonly-used controls are conveniently located on the side panel behind a flip-open cover. These controls include switches for text mode (on/off)

From the maker of the world's best television monitors...

Simulated image.

the world's best PC monitor.

Ask around broadcast circles who makes the finest TV monitors. There'll be no debate – it's Sony.

Sooner or later that same technology had to find its way onto computer screens. And here it is: Sony's new CPD-1402E Multiscan monitor.

This is a colour monitor quite superior to any you've probably seen before. Its resolution of 900 x 660 dots is without comparison.

Its flat, anti-glare, 14" screen is truly a sight for sore eyes! And being Multiscan, Sony's CPD-1402E

is fully compatible with IBM (including PGA, EGA and CGA) as well as most other computers.

The world's finest computer monitor is not in your neighbourhood computer shop. But you'll find it at Sony.

Ring Sony now for a demonstration.

THE SMARTEST INVESTMENT YOU CAN MAKE

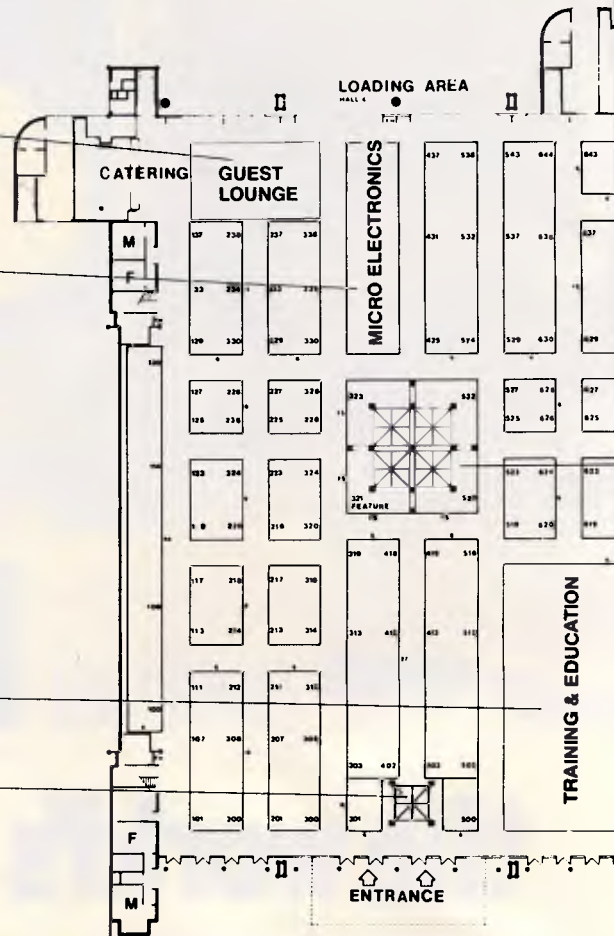

Executive guest lounge to get away from the crowd and get down to serious business (or entertainment).

Microelectronics display area showing the latest in chip and sub assembly technology.

The only exhibition held in conjunction with the A.C.S. conference and sponsored by The Australian Computer Society.

Training and Education display area.

Information directory and maps by product type and application – a first for an Australian computer exhibition.

If you thought investing in computer shows is becoming a waste of money, you are probably right. Until now. The Australian Computer Exhibition, which will be held in September at Darling Harbour, will change your mind.

Founded on research into what the computer industry is asking for, it is the only computer exhibition that can put you in direct contact with your major potential customers. Only the brand specifiers and volume buyers that you've been wanting to see.

Here's how we've put together the computer event of the year. Here are some of the reasons it's the smartest investment you'll make.

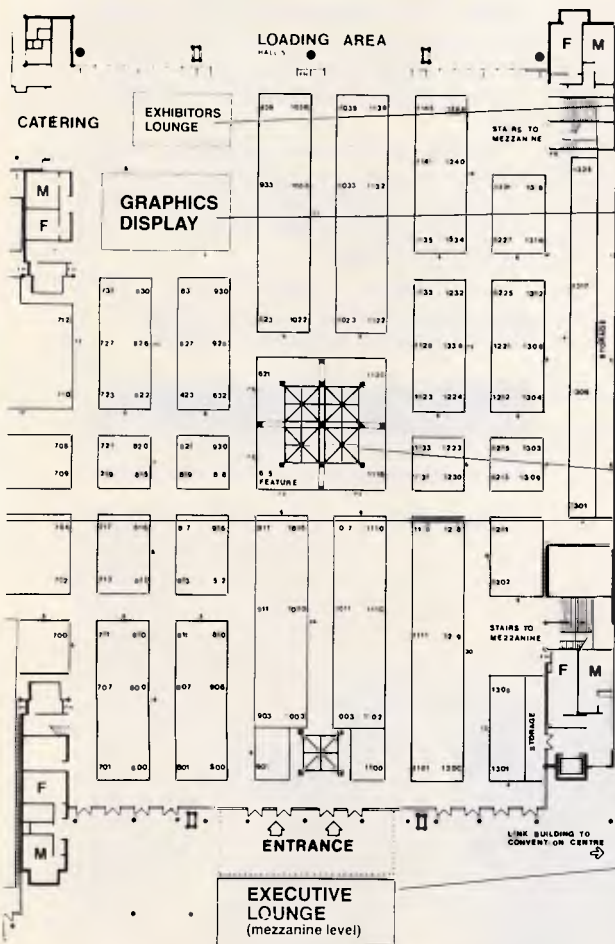

☐ **We have got the promotional power to pull in the right audience.** Backed by Australian Consolidated Press, we have the leading business and computer publications behind us. We guarantee the biggest and most tightly targetted promotional campaign ever conducted for an exhibition. With all details available to exhibitors, so you can capitalise on our promotion.

☐ **We have the standard of speakers your prospects will make time to come to hear.** Sponsored by the Australian Computer Society, the exhibition is the only one with professional industry backing, talks and seminars.

☐ **We can support you to the hilt.** Our organisers are available

Presented in conjunction with the Australian Computer Conference

T REAL ESTATE AN MAKE THIS YEAR.

Exhibitor lounge for staff breaks.

Graphics display area.

User seminars on wide ranging topics and trends delivered by authoritative speakers – not the usual sales pitches.

State of the art technology features.

Fully carpeted exhibition area.

Fully catered hospitality suite for product presentations or private press conferences.

The industry's major event covering the full spectrum of computers, communication and office technology products and services.

to help you with stand design, layout, planning checklists and advice. All you have to do is call.

☐ **Qualified prospects on your stand, fast.** The information centre will have maps by product type and application. So visitors to your stand will already be in the buying mood.

You asked for a well organised and effective show... now you have it.

And that's only the start. To see how little it costs to be an exhibitor at the computer event of the year, call our exhibition director, Fleur Michael now on (02) 264 5337.

by ACP Exhibitions, a division of Consolidated Press Holdings Limited

ACE

AUSTRALIAN COMPUTER EXHIBITION

SEPTEMBER 20-22 1988
DARLING HARBOUR

FARWAGI 7551

Top of the line, the NEC Multisync XL is the largest, highest resolution and most expensive

Most of the adjustments are conveniently located on the front panel: brightness (adjusts all colours), contrast (adjusts all but high-intensity colours), horizontal size, vertical size, amber/colour/white (the amber and white positions are for use with monochrome adaptors), and power. The power-on LED glows orange when the unit is set for digital operation and green when the unit is set for analogue operation.

Rear panel controls include vertical position, horizontal position, colour mode (automatic preset or manually set to 8/16/64 colours), and analogue/digital. The signal input is a single 9-pin D-shell plug.

The Eizo's bandwidth is greater than 30MHz, according to specifications, and its maximum resolution is 820 by 620. Horizontal scanning rate is up to 35kHz; vertical, 50 to 80Hz.

The 13-page manual provides brief operating instructions, pin assignments, timing diagrams, and specifications.

NEC MultiSync XL

This \$5500 unit measures 19 by 19 by 21ins and weighs 57 pounds. Its screen

and horizontal width (on/off); and adjustments for contrast, brightness, horizontal and vertical position, and horizontal and vertical size. The size and position of controls close to the front make it easier to adjust the picture.

On the rear panel you'll find additional controls to select the scan mode and analogue/digital input. A set of micro-switches selects the colour to be used in text mode; any of eight colours may be selected. Additional micro-switches let you adapt the monitor for use with various non-IBM colour adaptors, and a single 9-pin D-shell plug accepts analogue and digital inputs.

Video bandwidth is 40MHz and the maximum resolution is 800 by 560. The horizontal scanning rate is up to 35kHz; vertical, 45 to 80Hz.

The picture shifted positions in certain modes of a diagnostic test, requiring additional setting of the horizontal position and size controls. Colours were very close to those on the PS/2 display, with reds a little deeper and whites not quite so white.

The documentation we received with the unit was a very complete user's manual, including pin-outs and a troubleshooting guide. Warranty is one year parts and labour.

EIZO Flexscan 8060S

This monitor has a dot pitch of 0.28mm, which is very small compared to the 0.31

The Princeton Ultrasync is the cheapest of the eight monitors reviewed

pitch of most of the other monitors we tested. The unit has a 13in etched screen, measures 13 by 14 by 16in, and weighs 29 pounds. The bezel is fairly deep, limiting the effects of nearby light sources.

measures 19in and has a medium bezel; it shows sharp reflections that are attenuated so as not to be distracting.

Front-panel controls include power,

At 0.26mm, the Sony Multiscan CPD 1402E has the best shadowmask pitch

The unit we received did not come complete with documentation.

Sony Multiscan CPD 1402

This \$2088 monitor measures 12 by 14 by 17ins and weighs 32 pounds. Its cylindrical 13in screen gives sharp reflections. The shallow bezel accepts light from nearby sources but does not cause shadows from overhead lights. The dot pitch on this monitor is 0.26mm, the finest of all we included in this review.

Side panel controls (not visible while looking at the screen) are for power, contrast (adjusts all but intensity), and brightness (adjusts all). On the rear panel are controls for analogue/digital select and horizontal/vertical position and size. Also on the rear panel is a mode switch for digital operation, selecting eight, 16, or 64 colours. A single 9-pin D-shell plug accepts digital and analogue input.

Bandwidth of this monitor is 25MHz. Maximum resolution is 900 by 560. Horizontal scanning rate is up to 34kHz;

brightness, contrast, horizontal and vertical size and position, text mode, text colour (green, amber, or white), input BNC/D-shell, and a degauss button. Back-panel controls include an automatic/manual colour set switch, a digital/analogue switch, an 8/16/64 switch for manual colour setting, and an input voltage selector. For signal input, the unit has a 9-pin D-shell plug (analogue or digital signals) and four BNC plugs (analogue signals). A tilt-swivel stand is included.

The NEC MultiSync XL's bandwidth is 65MHz, and resolution is up to 1024 by 768. Horizontal scanning rate is up to 50kHz, and vertical scanning rate is 50 to 80Hz.

Princeton Graphic Systems Ultrasync

This monitor has a 12in etched screen and measures 12 by 13 by 14ins. The unit weighs 26 pounds. It comes with a tilt-swivel base.

Side panel controls are for brightness, contrast, text mode (green on black, amber on black, white on blue, or normal colour display), and power. Rear panel adjustments are for horizontal/vertical size and position; switches are for underscan and overscan, 16/64 colours for use in digital operation, and digital/analogue. A single 25-pin D-shell plug

The Thompson Ultrascan 4375M has most common controls on the front-panel, with more on the rear

accepts digital or analogue inputs.

Bandwidth of the Ultrasync is 30MHz, and maximum resolution is 800 by 600. Scanning rate is up to 35kHz horizontal and 45 to 120Hz vertical.

vertical, 50 to 100Hz.

The 25-page English/French operating instruction booklet included brief instructions for setup and use of controls, plus specifications and timing charts.

Thompson Ultrascan 4375M

This monitor measures 13 by 14 by 15ins and weighs 28 pounds. The 13in screen is tinted and etched to reduce glare and diffuse reflections. The bezel is fairly deep, reducing the effects of nearby lights but also allowing shadows on the screen.

Front panel controls include power,

brightness (changes all but high-intensity colours), and contrast (changes all colours). Rear panel controls include switches for selecting analogue/digital/composite video, normal/monochrome, and underscan/overscan, as well as adjustments for tint and colour (for use with composite colour video input) and vertical/horizontal position and size. Separate inputs are provided for digital signals (9-pin D-shell plug), analogue (25-pin D-shell plug),

and composite video (BNC plug).

Bandwidth of the 4375M is 30MHz, and maximum resolution is 800 by 560. Horizontal scanning rate is up to 35kHz; vertical, 45 to 75Hz.

The 34-page English/French operating instructions included detailed instructions for connection and use of controls, specifications, special features (eg, superimposition of images), a troubleshooting guide and timing charts.

Price: \$69.95

The survival of our species is not something many of us have much cause to think about in our daily lives. With food and shelter available in abundance, we pass our days almost mechanically, worrying neither about where the next meal will come from nor about where we will stay after leaving the office.

Imagine, then, what it would be like to live in a world without all the material things we have surrounded ourselves with over the centuries. Imagine, in fact, what it would be like to be a creature fighting for survival in a world where animal life is divided simply between predator and prey. If you were one of the latter, would you be able to survive? Moreover, do you think you could survive long enough to evolve into the dominant species, hunter of all creatures and prey to none?

These rather intriguing, if inadequately hypothetical, questions are the basis for *Eco*, an intelligent, and brilliantly conceived and executed program from Ocean. Unlike anything you have seen before, *Eco* is a stunning, if highly stylised, simulation of a world inhabited by a large variety of fauna and flora representing almost every level of the food chain. Starting from the lowest form of life — say, a fly or a worm — you must eat, mate, and develop more complex offspring, with the aim being to develop so far that you are able to hunt *anything* without fear of being hunted yourself.

Eco opens with a beautifully-presented and thought-provoking extract from Darwin's *Origin of Species* that effectively galvanises one's imagination into overdrive. Having created the right atmosphere, the program then goes on to select randomly an ecosphere based on one of several different worlds, each with its own climate.

The diversity of plant and animal life that subsists in a world depends entirely on the prevailing climatic conditions. For instance, only the likes of scorpions can live in arid desert conditions, while a lush equatorial region gives rise to a large variety of creatures, including simple insects and hominids.

During play, the display divides horizontally into two halves. The top half forms a window on to the world chosen by the computer; and the bottom half contains a number of icon controls to move your assigned creature along the ground in any one of eight directions — to send it on a search for food or, alternatively, for a mate — and, if it is a winged beastie, to make it take off and land.

A small radar feature tracks the movements of other creatures, allowing you to keep an eye out for possible sources of food and, rather more important, for predators who may be planning to make you their next meal.

In the top window, you can see not only your own creature but also any others in the vicinity. This part of the display is testimony to the skill of the programmers at Denton Designs, a name that disappeared from these pages a long time ago but has re-emerged triumphant.

All the creatures are depicted as fully-animated vector graphic figures which run, bound, scuttle, fly or wriggle across the screen without the hint of a flicker. The most impressive of all the animals is the seemingly indefatigable hominid, which runs and walks with immense grace and stops only to pick up a bite to eat, whether it be a hapless insect or a large quadruped.

Using the Atari's arrow, home and insert keys, you can pan around the landscape as though you were in control of a camera able to move in any direction. Via this option, you can move around your creature and examine it from virtually any angle. And, when another animal runs by, you can spin round so that you can watch it run towards you and then away in the opposite direction.

The most important thing to do when the game begins is to find food. Depending on the climate, this can be either super-abundant or scarce; but, no matter where you are, it is always in the form of stubbly grass.

AFTER DARK

Finding food is simple: all you do is move around the world until you come across a blade or two of green, and then click on the 'eat' icon to start your creature munching. Alternatively, you can click on the eat icon from the outset, in which case your creature will search for food of its own accord.

As your creature eats, a skull, with its jaws chomping, rises on a spine-like stalk in the bottom right-hand corner of the display. When it has risen to its full height, a fire, symbolising death, flickers at the spine's base. As your creature ages, the flames rise until, at the point of death, the skull is engulfed.

When you have successfully fed your creature, you can send it off to look for a mate. After it has found one, the display changes to reveal an ingenious little item called the 'gene designer'.

The gene designer allows you to play either God or Frankenstein, depending on how you look at it; for this is where new and, perhaps, better life is created. Down one side of the designer runs a line of eight

hieroglyphs, beside which are eight corresponding orange balls representing the eight genes that make up your creature's DNA.

Each time your creature mates, you can 'unlock' one of the genes: you can drag the unlocked gene to various positions either left or right of its original one. Each time you move the gene a certain distance, its corresponding hieroglyph changes, indicating a change in the overall DNA structure. The effect this has on the physical characteristics of your creature are shown on a blueprint lying alongside the DNA filament. A gene unlocked in this way remains unlocked, and can be moved in combination with others whenever your creature mates.

Learning what each gene controls is a major part of the game. Sometimes you may unlock one and find that the only effect it has is to give your creature a bigger nose or longer arms. At other times, however, a single displacement can turn your animal from a hominid into a large chicken, or even a slug. But, being a slug is not as bad, believe it or not,

as being a plant. Become one of these and your chances of survival are zilch.

When you return to the main screen from the gene designer, the first thing you notice is that your creature is much smaller than all the others roaming about. This is because it is but an infant and, therefore, must be fed to enable it to grow to maturity. Having fed, it can then look for a mate.

One thing you must avoid when creating a new species is making it too exotic. Although giving it wings, a massive proboscis and legs might have seemed a good idea at the time, you will soon find that it becomes extinct through not having another creature even nearly like itself to breed with.

Eco is one of the most unusual, and certainly inventive, games to have appeared on the scene in the past year or so. Its graphics and gameplay make it instantly appealing, though some people, particularly those who go in for shoot-'em-ups, will perhaps find it rather too pedestrian for their tastes.

One small step

Title: Apollo 18

Computer: Commodore 64/128

Supplier: Ozisoft

Format: Disk; cassette

Price: Disk, \$39.95; cassette, \$29.95

If you are old enough to remember the Apollo space missions, you will no doubt remember the thrill of watching Man's first tentative steps on the moon. And, when Neil Armstrong spoke those immortal words: ... one small step for man, one giant leap for mankind', who but the most blasé could fail to feel a degree of pride at the enormity of the achievement.

Sadly, those pioneering days are gone, at least for now. Not even the Space Shuttle managed to affect the world's collective consciousness in the same way as the Apollo project.

If you yearn to relive the days of lunar landings and heart-stopping splash-downs, Electronic Arts' Apollo 18 is probably as close to the real thing that you can get without actually leaving your front room. It is not a precise simulation as such, but the atmosphere that it creates sure sends a shiver down your spine.

Apollo 18 puts you in the driver's seat, so to speak, of an Apollo rocket. Your mission is to blast off, dock

with an orbiting space station, land on the moon, drive around the lunar surface, take off and re-dock with the command module, perform a spacewalk, capture a satellite, and then, finally, re-enter the earth's atmosphere and splash-down. Easy, huh?

The blast-off is viewed from inside what I suppose is meant to be the control room at Cape Canaveral. In front of you are a number of controls, beyond which are ranged various monitors manned by control staff members. In the distance, through a window on the far wall, you can see the rocket.

Prior to take-off, it is imperative that you make a number of pre-flight checks via what is called the 'telemetry screen'. There are a number of telemetry screens in the game, each corresponding to one of the mission phases. It is almost impossible to do

anything without first of all programming something or other in the telemetry screen.

After making the necessary pre-flight checks, a very clear, very serious, extremely American voice advises you to begin the count-down by pressing the joystick fire button. From here on, success depends entirely on hand/eye coordination.

As the rocket rises from its pad the scene in the far window zooms in on the action, so that you get a view rather like that in the now famous film taken from a camera placed looking down the sleek body of an Apollo rocket as it pulls away from its moorings. Although not nearly as impressive, the game's graphics and roaring engine sound effects are good enough to evoke in one's mind the experience of watching the actual event on television.

Pay-If-You-Like Software

Why pay hundreds of dollars for software? There is an inexpensive alternative for your IBM PC or compatible - and it's legal.

NEW
RELEASES

Some people will try and tell you they have free or cheap software. Don't you believe it!

The concept works like this...Authors write software and have it distributed as Shareware, or User Supported Software. A copy of the software with a manual on the disk is made available to you at a nominal fee and if you like the software you are requested to send the author a donation, usually between \$20 and \$150. In other words you pay if you like the software. It is NOT free and it is NOT cheap and nasty, but generally of a very high quality. If you decide not to register with the author you may keep the software.

PC-SIG is the world's largest distributor of User Supported Software. Great efforts are put into testing and cataloging the software culminating in our 400 page directory and 60 page bi-monthly magazines. These publications are available in selected computer stores at \$28 for the directory and \$3 per copy of the magazine or available as part of membership of our library. Not only do we include a description of the software but the equipment required to run it, some user comments, and the author's requested donation.

Our library now contains over 1000 disks. You need NOT be a member of the library to purchase disks but if you do become a member you will receive our 400+ page Directory, disk discounts and our bi-monthly magazine "SHAREWARE" with descriptions of the latest additions and reviews of the more popular disks. Our magazine is not just a few photocopied pages but a bound professionally produced publication.

The following is a small selection from the library...

❑ #5 & #730 PC-FILE + (two disk set)

Jim Button's very popular database filing system now easier to install and use and it runs faster. Reports can be prepared or set up for your word processor.

❑ #90 & #594 GENEALOGY ON DISPLAY (two disk set)

Written with concern for the novice Genealogist. As well as expected features eg printing family trees, family group sheets, and descendants charts the program creates parent/child indexes and prints ID numbers.

❑ #105 PC PROFESSOR

A tutorial on the BASIC programming language which increases in complexity as the user progresses.

❑ #199 PC-CALC

Complete with tutorial and many advanced features. Similar to Visicalc. Able to import data from PC-FILE.

❑ #254 PC-DOS HELP

Just type help for an on-line help on DOS commands - very convenient for hard disk users.

❑ #320 TOUCHTYPE

Colourful way to improve your typing - new version with enhanced and PC keyboard.

❑ #403 PC-TUTOR

Ideal for new users to gain a basic understanding of their PC and how to use it. An interactive introduction to the IBM PC and DOS.

❑ #457 ARCADE GAMES

An assortment of arcade games including Flightmare and Spacewar.

❑ #476 PATRICK'S BEST GAMES

An assortment of five games which will run on the Mono monitor.

❑ #480 PC OUTLINE

Can outline and organise documents point by point - ideal for typing essays and ads like this. From Brown Bag Software.

❑ #505 PC STYLE

Analyses textfiles for readability, - considers number of words per sentence, % of words of specific length, personal words, action words. Make your writing read better!

❑ #523 SIDEWRITER

Your spreadsheet too wide to print? This program turns your printout 90 degrees and prints down the page.

❑ #528 NEW YORK WORD

A full function word processor even including automatic hyphenation (and de-hyphenation). Unlike some WP it can edit large documents. Has become a leading WP since being converted from Unix.

❑ #618 MAKE MY DAY

A complete time management system with appointment calendar, job scheduler, time log and expense manager. All that is needed to organise your business and personal schedule.

❑ #641 MAHJONG

A fascinating game with extraordinary graphics. Excellent documentation for beginners with play levels from beginners to excellent.

❑ #646 AMY'S FIRST PRIMER

Six games to teach basic reading skills to a pre-reading child - positive reinforcement promotes "learning is fun" attitude.

❑ #669 & #670 GRAPHTIME II (two disk set)

Business presentation graphics with line, column, and pie charts. Works with dBASE Multiplan and Lotus. Has help key.

❑ #683 BUTTONWARE ADVENTURES

Two text adventure games - be a Castaway or travel to South America on a spy mission. Runs on Mono.

❑ #705 CHILDREN'S GAMES

A straight forward approach to making fun educational with graphics. Geared for 2 to 10 year olds.

❑ #708 BACKGAMMON

At last Backgammon for your PC - keeps track of points, games, gammons and backgammons. An instant opponent.

❑ #718 LQ PRINTER UTILITY

Enables your Epson printer to print a variety of fonts in near letter quality. You can even create your own fonts plus print large letter banners.

❑ #727 POWERMENU

Brown Bag Software's menu system with up to 10,000 selections. All your applications can be just a keystroke away.

❑ #728 & #729 HOMEBASE (two disk set)

A second generation memory resident desktop organiser from Brown Bag Software. PC Magazine said "it delivers the most bang for the buck among desktop organisers."

❑ #765 GALAXY

A fast RAM based WP. Very easy to use with choice of menus or keyboard commands.

❑ #780 BRIDGEPAL

Looking for up to three partners with whom you can play Bridge? A great way to practice.

❑ #800 THE BAKER'S DOZEN

A collection of more than 13 useful utilities from Buttonware.

❑ #806 & #807 THE REMARKABLE GENERAL LEDGER (two disk set)

This Australasian written system not only includes a full general ledger but it has various reports on your entries, a bank reconciliation and trial balance.

❑ #811 INTELLI-TRIEVE

A weighted retrieval utility to use with dBASE III to extract information not considered in the original design.

❑ #812 & #813 SOAR (two disk set)

Service Orientated Accounts Receivable for businesses that provide services as well as products. Menu driven and easy to operate.

❑ #816 & #817 TURBO C TUTORIAL (two disk set)

Programmers who complete this tutorial will then be very familiar with TURBO C.

❑ #855 FASTBUCKS

A home financing program to not only record transactions but to help with budgeting. Also has loan calculator.

❑ #866 & #867 DEEP SPACE

Plots star maps for a given latitude where you select projection and scale. Also plots orbits of the planets.

❑ #870 HGCIBM

Provides owners of Hercules Graphics cards a means to run software written for IBM Colour Graphics Card.

❑ #878 TEACHERS DATABASE 1000

Holds data on up to 250 students with up to 60 records per student. Test results may be weighted, averaged, statistically analysed, changed to a percentage or changed to a letter grade and graphed.

❑ #879 BIORHYTHM SCHEDULE

Not only calculates Biorhythms but can compare Biorhythms of two people for compatibility for each of the three cycles.

❑ #893 PRIVATE LINE & WEAK LINK

A full encryption/decryption system even supporting double encryption plus the ability to allow two PC's to send data to each other via serial ports. Great where machines have different floppy drives.

❑ #912 & #913 FLODRAW (two disk set)

Handles symbols quickly and easily and is ideal for flowcharts, organisational charts, system diagrams, and other symbols oriented diagrams.

❑ #918 CAMBRIDGE THOROUGHBRED HANDICAPPER

Attempts to predict a horse's performance in a future race by analysing past runs. Also includes a betting strategy.

❑ #929 LOTTO FEVER

Shows your Astrologically lucky numbers, gives you an Astrological forecast and a description of your personality characteristics.

❑ #997 OPUS 1 BRAIN TEASERS

Charade type game with various categories. For example "The Graduate" has a clue of GRADUUUUUUUU.

❑ #1000 NETHACK

A huge game with 28 levels 150 rooms and countless corridors. A huge inventory of monsters and traps plus some hazardous treasures and Keystone Kops which throw cream pies!

MEMBERS STARTER PACK

Get off to a flying start with Membership and select six disks for just \$85 (plus \$5 freight) - that's a saving of \$31 from our already low prices. Plus we'll give you a FREE educational disk. This offer is available for a short time only.

The PC-SIG Library is not only growing but it is regularly updated - many alternate sources of User Supported Software have very old versions. Beware of the apparent bargains!

Yes, I would like to try PC-SIG software. 802

AFTER DARK

To clear the first stage safely, you must watch a red strip which moves horizontally across the screen. When it gets to a specific point, you must press the fire button with the aim of stopping the strip as close to said point as possible. When you press the button, a time in 1000ths of a second appears in a small onscreen readout. If, after performing this procedure several times during the first phase, your cumulative time is 148 or greater, the mission is automatically aborted.

Okay, this doesn't sound too bad. But, as well as making sure that the red line does not overshoot the critical point, you must simultaneously keep the craft from over-rotating by moving the joystick left and right. Phew! If you think this sounds difficult, it is; or at least it is until you get the hang of it.

Once out of the earth's atmosphere, you go into a quick orbit before heading off for the moon. From now on, you see things through the eyes of the astronaut manning the craft.

On the way to the moon, a number of course corrections have to be made via the onboard telemetry system, as must a routine docking procedure with an orbiting space station. Once again, a steady hand is required to guide your craft into the docking section of the space station.

One of my favourite phases in the game is the space walk, in which you practise capturing a satellite launched from your craft. The idea here is to guide an astronaut figure towards the satellite, hook it, and drag it back in. This section, like everything else in the game, is scored on the time/number of attempts taken for the satellite to be recovered.

My one gripe about the cassette version of Apollo 18 is that each phase has to be laboriously loaded in separately. If you fail halfway through a mission, this means having to rewind side A and then re-play the tape until the beginning of the load code is found.

Electronic Arts could make this less tiresome by starting the code near the beginning of the tape instead of what seems nearly a quarter of the way through.

Apollo 18 is a fairly simple but extremely effective evocation of the ethos of the Apollo project. Its graphics are, on the whole, good, as are the sound effects. If you were, or are, fascinated by what was an historic achievement, Apollo 18 will certainly liven up your game-playing.

CT1088 SOFTWARE

With OS/2 breaking new ground in the operating system arena, this month our book reviewers assess current offerings ranging from DOS to Apple's HyperCard.

The Complete HyperCard Handbook

Author: Danny Goodman
Publisher: Bantam Books
Distributor: Transworld Publishers
ISBN: 0-533-34391-2
Price: \$70

I am always very suspicious of computer books that are published a matter of weeks after their subject is launched. It usually means one of two things: either the book is no more than a rewrite of the manual, or the author has been commissioned by the manufacturer to write an accompanying book. In the first case, the book is rarely worth the paper it is printed on; in the second, it is often a dull and biased read. *The Complete HyperCard Handbook* is a hefty 700-page tome that arrived at practically the same time as HyperCard itself. I was prepared for the worst.

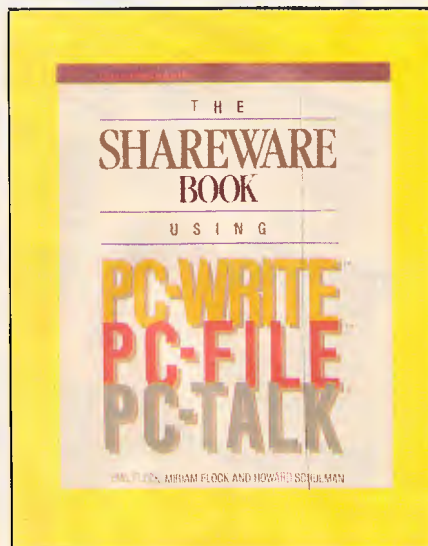

By page 5 it was obvious that this book is different. Author Danny Goodman has been involved with HyperCard for the past year and a half, since the time it was little more than a few MacPaint pictures. By page 10 I'd fired up my Macintosh and was busy following a guided tour of HyperCard concepts. *The Complete HyperCard Handbook* is not a

reference book; it is a book to be worked through page by page with a Macintosh in front of you all the way.

The book is basically divided into four sections: Browsing through HyperCard, HyperCard's Authoring Environment, HyperCard's Programming Environment and Applying HyperCard & HyperTalk.

The section on HyperCard's programming environment is where the book really excels, for me totally replacing the official Apple documentation. I particularly recommend this section for those with no previous programming experience, as the author purposefully steers clear of making analogies with existing programming languages. One chapter which lists the properties of every element in HyperCard is now incredibly dog-eared after less than one month's use.

HyperCard is a wonderful piece of software. *The Complete HyperCard Handbook* is a wonderful book.
Barbara Gaskell

Mastering DOS

Author: Judd Robbins
Publisher: Sybex Computer Books
Distributor: Methuen Publishers
ISBN: 0-89588-400-3
Price: \$49.95

This large (500+ pages) book is both a tutorial introduction and a user's guide to the principal IBM PC/XT/AT operating systems PC-DOS and MS-DOS, covering versions 2.0 through 3.3. As with most books of this genre, it starts from first principles with an introduction to hardware and software concepts and how to back up disks before moving on to elementary DOS operations. The next section is a tutorial-based guide aimed at introducing elementary file manipulation and setting up suitable directory structures for running different application packages.

From the halfway stage in the book, the emphasis shifts from a tutorial approach to a more advanced text covering DOS usage for power users and system programmers. Unlike many DOS books, this section is not merely a catalogue of DOS features but clearly explains the use of such features through well-documented examples. Many of these examples are available on a disk which you'll have to obtain from the publisher in the US as the Australian distributor, Methuen Publishers, is not making the disk available to Australian customers.

It is a measure of the quality of this book that the same clarity of description found in the introductory sections is maintained in the highly technical advanced section. This advanced section covers virtually every aspect of DOS including keyboard customisation, sophisticated batch file usage and connecting multiple disk drives into a single DOS directory structure. The last chapter looks at a range of utility software available for DOS machines and gives an even-handed assessment of their capabilities and limitations.

I very much liked *Mastering DOS*. It is clearly written, authoritative and, for once, succeeds in taking the reader from elementary DOS through to the design and application of sophisticated utilities. Either as a tutorial introduction or as a reference book for more advanced users, this book is one of the clearest and most authoritative guides to DOS that I've read.

Dr Simon Jones

Hacker's Handbook III

Author: Hugo Cornwall
Publisher: Century Hutchinson
Distributor: Century Hutchinson
ISBN: 0-7126-11479
Price: \$19.95

This latest incarnation of *The Hacker's Handbook* from the UK looks, in places, like the computer enthusiast's version of *Spy-catcher*. There is a very impressive chapter (around 40 per cent of the book has not appeared in previous versions) about how two English journalists discovered details of the computer installation used by M15. The actual details include the make and model of the machine, the number of terminals, the operating system and the communications protocol. However, the (fairly simple) method which allowed the journalists to gather this information is probably more useful to amateur sleuths than the eventual results.

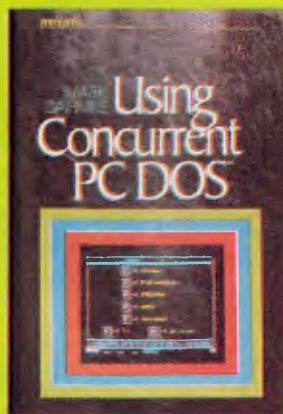

The chapter on UK Government installations is just one of the additions in *HH3*. Another is the updated information on previously reported hacks, including the Prince Philip Prestel hack. The report on this one in particular now includes details of the acquittal in the High Court. Thankfully, the chapter on radio hacking has been trimmed, as I always felt that such information was slightly out of place. While many computer users have modems, few have RTTY (radio teletype) receivers.

As before, the book contains full details of the events leading up to a number of 'unauthorised accesses' to computer systems. Some people are bound to criticise the author for explaining the tricks. However, my personal feeling is that the only way to protect computer information is by employing

experienced security managers. Knowing how to spot the early stages of a hack — and how to prevent them happening altogether — requires some knowledge of the way a hacker thinks and operates, and this is what the book is trying to provide. As such, I feel it should be required reading for anyone involved in upholding the security of a computer.

And, if you're not already into computer communications, prepare to be amazed.

Roger Dalton

Using Concurrent PC-DOS

Author: Mark Dahmke
Publisher: McGraw-Hill
Distributor: McGraw-Hill Australia
ISBN: 0-07-015073-7
Price: \$49.95

Concurrent PC-DOS is Digital Research's alternative to Microsoft's Windows and provides the multi-tasking facilities that MS-DOS lacks. The reader that this book is aimed at, therefore, will be emigrating from MS-DOS and would probably want an overview of the new system plus some discussion of the special features provided. I am not sure, however, if Dahmke's book exactly fits the bill. It is insubstantial (150 pages) and greatly overpriced, offering a very quick canter through the subject (I read the whole book in one evening) and glossing over any area which threatens to require a fuller treatment.

Yet it is useful. The introductory chapters provide a concise overview of the history of PC operating systems in general and Concurrent PC-DOS in particular. The concept of concurrency itself is also explained quite clearly, and Dahmke provides numerous illustrations

of the various screen displays to clarify the textual explanations of individual Concurrent PC-DOS functions. There is also an appendix of Concurrent PC-DOS commands in quick-guide format which would be useful once one was fairly familiar with the system.

Nevertheless, the book is disappointing. The chapter which I found particularly frustrating was the one entitled 'Customising Your Personal Computer'. This is just nine pages long whereas it really should have been as long as all the other chapters put together. There are no examples of batch files which would exploit the Concurrent PC-DOS multiple window environment, merely a few airy references, in the book's usual throwaway style, to possibilities which are not explored. Certainly, Dahmke does not attempt to convey the idea that working within a multi-tasking environment might involve different disciplines from single-tasking.

All in all, this is a book to skim through in a quiet hour in a book shop before buying something else!

Jeff Wells

MUSIC SOFTWARE AND HARDWARE FOR ATARI, IBM, APPLE AND COMMODORE COMPUTERS

There are as many music programs as there are music styles, and the only way to find the one that works for you, is to try it out.

At Harbour Music, we have a fantastic selection of software, computers and keyboards on display, ready for you to try. Our staff can give you hands on demonstrations of every system, and help you choose software, interfaces and instruments to suit your musical tastes and budget. Speaking of budget, our advice is free.

First-class Postscript

Attractive printout need not be the exclusive preserve of Macintosh users! Julian Dow takes you through the rudiments of the arcane but powerful language, PostScript, and shows you how to drive the Apple LaserWriter from any micro.

Desktop publishing is the growth area in microcomputing. Increasingly, people are discovering that it is no longer necessary to choose between dot-matrix output and the jobbing printer's beautiful but expensive product. The desktop publishing (DTP) empire is founded on the middle ground. You want your work to look crisp, neat and professional, but without having to go out-of-house to achieve it. The Apple Macintosh shot to fame for its obvious talents in this field as much as any other. The page description language (PDL), PostScript, developed by Adobe Systems, became the industry standard overnight when Apple adopted it for its LaserWriter printer.

Computer phototypesetting, the process by which text is converted to camera-ready bromides for plate-making, used to be much like any other kind of computer printing. The printer was connected via a data cable, and the text to be printed was sent as ASCII. If a change in font size or style were required, control codes were sent, and the subsequent text was interpreted differently. This was easy to understand and cheap to implement, although the equipment was hardly cheap to purchase. Computer phototypesetters were good at handling text, awful at handling graphics, and totally unable to integrate the two.

The PostScript language, another product to have been nurtured at the Rank Xerox Palo Alto laboratories, is owned by Adobe Systems. It takes a

The calculations for this Mandelbrot set took 48 hours and were done in PostScript

revolutionary approach to phototypesetting. What is sent down the data cable to the printer is not a stream of text, punctuated by control codes, but an

ASCII listing of a computer program written in PostScript with the text interspersed as data statements. The program is then executed by a Post-

Script interpreter inside the printer.

This implies considerably more sophistication at both ends of the data cable, both in parcelling up the data to be sent, and in building up the image of the desired page at the receiving end. However, the enormous benefit is that text and graphics can be freely mixed on the same page, and can even interact. In PostScript, text can easily be fitted around an arbitrary object, like a circle. In the past, such an effect would have been impossible without recourse to Letraset and a skilled graphic artist.

The PostScript standard is accordingly becoming established. Even Hewlett-Packard compatible laser engines are starting to include PostScript interpreters. The Sun workstation (reviewed in *APC* last month) operates as a series of PostScript windows. More importantly, the new generation of Linotronic computer phototypesetters are driven in PostScript. This may seem an unimportant point when the output of a LaserWriter seems so impressive, but rest assured that, for professional purposes, 300 dpi (dots per inch) is simply not good enough. A resolution of 900 dpi is considered adequate; the Linotronic

L300 phototypesetter delivers 2540 dpi! Additionally, a full typesetter provides greatly superior justification facilities and a wider range of fonts — but at \$60,000 or more, it's just as well.

The lovely thing about PostScript is its device independence. Precisely the same PostScript code can be used to drive a LaserWriter or a typesetter, and the result will look identical on both (apart from differences in resolution). The Apple LaserWriter is thus seen by the industry as an inexpensive proofing tool before the final bromide run on the typesetter.

Why learn PostScript?

At one level, you may be curious as to how typesetting works. At another, you might be keen to write a desktop publishing (DTP) program yourself. Or you may simply want to achieve effects which are unavailable to you using proprietary software, even on machines like the Mac.

There is a two-volume bible for experimentation in this field, published by Adobe Systems. Both the *PostScript Language Tutorial and Cookbook* and

the *PostScript Language Reference Manual* are highly lucid and informative. If you want a few more examples to peruse, try the article by Pelli, *Programming in PostScript* (*Byte*, May 1987, 185-202).

Perhaps the most important reason for learning PostScript is that, like me, you find yourself in a mixed computer environment where you don't have a Macintosh computer but do have access to a LaserWriter. In that case, you must have dreamed of getting your computer talking to the LaserWriter, and getting high-quality output.

There are solutions, of course, you can buy an IBM card which allows you limited access to the Appletalk network, and you can then use the LaserWriter as a basic Diablo-compatible printer. Alternatively, read on. This article will tell you how to send both graphics and text, in fonts of your choice, to the LaserWriter, all for the price of a home-made cable.

Connecting your micro to a LaserWriter

At the back of the LaserWriter, there are two D-connectors (9-pin and 25-pin) and

a rotary switch. The selected connector and its behaviour depend on the switch setting. These can be one of:

Appletalk Input is taken from the 9-pin connector, according to the Appletalk protocol. The Macintosh is connected to this socket.

Special Diablo 630 emulation mode. Serial input is taken from the 25-pin socket at 9600 baud, parity ignored. The LaserWriter pretends to be a reliable, quiet, fast and expensive Diablo daisywheel printer. Only a typewriter font is available, but if speed and quietness are important to you, you could consider using a LaserWriter as your normal office printer. Note that this mode accepts text, not PostScript commands!

1200 PostScript batch mode: accepts input from either the 9 or 25-pin connectors at 1200 baud (parity ignored).

9600 PostScript batch mode: accepts input from either connector at 9600 baud (parity ignored). The baud rate and parity for this setting, however, can be reconfigured.

The connection for the IBM PC to the LaserWriter is shown in Fig 1. You should disconnect the AppleTalk connector from the LaserWriter while running it from the 25-pin port, otherwise the network will behave strangely and you may become unpopular with the official users of the printer!

Communication

The PostScript interpreter expects to receive only printable ASCII characters. Control codes are not approved of. This is good, because it means that you can use almost any text-processor and any comms program to send your output. Under some circumstances (for example, with bit-mapped images), you will need to send binary data to PostScript. In this case, you should send an ASCII hexadecimal version of each byte: hex 255 would be sent as the two-character string 'FF'. In this way, there's never any need to send weird ASCII codes to PostScript except for communications protocols.

PostScript is an interpreted language: that is, lines are interpreted from the source code that you supply, when the program is run. Like Basic, there is a speed penalty to pay; but it is generally rather easier to work with an interpreter than a compiler. The PostScript interpreter sits in the printing device, so you don't need any special PostScript program for your computer, only the ability to send ASCII files through your serial port.

So, any micro with a text editor and a comms program is ideal. As to the

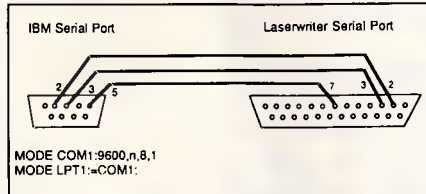

Fig 1 Connections on the LaserWriter

protocol, the default baud rates are 1200 and 9600. You are advised to set up communications using 1200 baud. However, once you transfer bit-map images to the printer, you'll be unlikely to get results on a reasonable time scale without using 9600 baud.

The PostScript interpreter can be stunningly slow, so it's important to make sure that you don't hang the system by sending data faster than the LaserWriter can handle it. Your communications link must be able to support the XON/XOFF protocol. Put simply, your computer must listen as it sends to the LaserWriter, and stop whenever it hears XOFF (ASCII character 19). It can resume transmission when it gets XON (ASCII 20). In theory, the protocol works the other way round too, allowing your computer to stop itself from being swamped by diagnostic messages from the LaserWriter. In practice, though, these are both rare and terse, so (provided your computer empties its input buffer occasionally) there should be no need to worry. Most terminal emulator programs will support XON/XOFF. Sending ASCII 4 at the end of your text file is wise. If you've written bad code, it tells the PostScript interpreter to ditch the job.

If you're using a comms program, and you're curious as to what the LaserWriter's doing, type Control-T. This causes the LaserWriter to send back a one-line status message describing its progress — idle, busy, printing, no paper tray, and so on. Programs could perform this task automatically every few seconds to warn of any problems.

Nature of the language

PostScript is a fully-fledged computer programming language. Only about a third of its commands directly handle imaging. However, it is extremely well-suited to the task of image specification. There are two points which must be understood clearly before you dip into the language. PostScript uses a post-fix notation, and is stack oriented.

If you're a Forth programmer this will probably come as great news, but if you're a mortal like myself, you'll already be wondering if it's worth the effort coming to grips with the language at all. If

TECO MONITORS: "PICTURE PERFECT"

The human eye is an amazing instrument. It can see the smallest detail, the subtlest of hues in a rainbow of colours. It places demands on high resolution colour monitors that requires precision engineering and high-tech manufacturing. ▲ TECO's TE5155 14" intelligent Multiscan monitor is a brilliant example of technology meeting the demands of business and matching the astounding abilities of nature. At one stroke it has solved the upgrade problem by offering fully automatic compatibility with most standard IBM™ PC/XT/AT graphics adapter scan rates and cards, including PGA, CGA, and EGA. ▲ For business graphics, CAD/CAM applications, text and computer generated art, TECO Multiscan is quite simply the best monitor available. With sharp, crisp text and graphics in the TTL or Analogue mode. Plus non-interlaced technology and high 35MHz video band width for flickerless fatigue free viewing. ▲ For over thirty years TECO have been quietly channelling their energies into building a solid reputation for quality manufacturing and state-of-the-art technology. ▲ TECO offers the sort of product range, stock availability, service support and direct manufacturer back-up that most high profile Australian distributors find hard to match. All at a price that reflects our concern for user sensibilities and dealer realities. ▲ Call us today and see if TECO's technological vision in monitor quality matches your idea of 'picture perfect'. ▲ TECO also welcomes dealer enquiries and would be only too happy to show you the rest of our impressive range of computer monitors, terminals, disc drives and dot matrix printers.

FOXY

these terms mean nothing to you, then here's an example. In Basic, to add 2 and 3, you'd say something like:

A=2+3

Whereas in PostScript, you'd say:

2 3 add

This means: (a) put 2 on the stack; (b) put 3 on the stack; and (c) take the top two numbers from the stack, add them, and return the result to the stack. Note that the result is not normally stored as a variable, so to program competently in PostScript, you need the kind of mind that can keep track of what has gone on the stack, and in what order.

If you're the kind of person who can remember what cards have gone down in a game of poker, or if you write compilers for a living, then this will be second nature. If not, then draw some consolation from the fact that it is possible to store to named variables in PostScript using the slightly cumbersome DEF construct (of which more below).

The question of the superiority or otherwise of post-fix notation has enlivened the letters page of more than one computer journal. The important things in its favour are its compactness and ease of implementation while against it weighs the fact that relatively few people can ever obtain an intuitive grasp of what's going on. In selecting this style for the PostScript language, Adobe has ensured that the limited processors in PostScript printers can perform quite impressively for their size, but has rendered the language difficult for any but systems developers to spend time on. This is a shame as PostScript repays some effort in understanding.

The ideal page

The PostScript 'ideal page' is like a sheet of graph paper, with the origin in the bottom left-hand corner. Unlike graph paper, however, the page is ruled in divisions of 1/72 inch. This corresponds to the printing industry's 'point' scale, which is great for some things (like specifying the size of type you want), and lousy for others (like specifying where on the page to put it).

Fortunately, there are simple ways to specify chosen co-ordinate systems, and an example will be given shortly. Another point to note is that the default origin is the physical corner of the paper, although the printable area is not so large (for A4 paper, it's a 7.41in x 10.86in size, centred on the 8.25in x 11.66in page).

Moving around on the screen will be immediately familiar to anyone who has programmed points directly to a video screen. You can either move the origin and co-ordinate systems with the trans-

```
% The simplest of all programs
/Times-Roman findfont

setfont
72 72 moveto
```

Listing 1 The 'Hello World' program

Hello World

Fig 2 Output of program

late, rotate and scale operators, or move relative to your co-ordinate system with the MOVETO command.

PostScript can handle three major groups of pictures: text, paths and images. Text is handled as strings (enclosed in brackets rather than the more common quotes), and placed on the page at the current co-ordinates with the SHOW command. A path is a series of points, specified by (for example) a series of MOVETO and LINETO commands, and is placed on the page by the STROKE command. An image is a 2-D greyscale bit-map which is plotted onto a unit square by the IMAGE command. Any or all of these commands can be used to build up the printer's notional representation of the page, which is then committed to the physical page of paper by the SHOWPAGE command. No SHOWPAGE, no output! Because of this emphasis on pages, PostScript is known as a 'page description language'.

By general convention, the first example in any computer language tutorial is a program to print the words 'Hello World'. Listing 1 begins with a descriptive comment, specifies a resident font, scales it to 18-point size, moves one inch up from the bottom-left corner of the page, prints 'Hello World', and commits the image to paper (Fig 2).

Hello World

However, even this program merits detailed study. First, the comment line: any text following '%' until the next newline is considered as a comment and ignored by the interpreter. A newline in PostScript is the 'linefeed' character (ASCII 10). However, carriage return (ASCII 13) or combinations of carriage return and linefeed are automatically interpreted as newline.

The second line is interpreted as follows: put the name Times-Roman on the stack as a 'literal' (something not to be interpreted) as it is prefixed by '/'. Then

execute the 'findfont' procedure, which expects to take a font-name from the top of the stack, find the font, then put it on the stack. Note that the entire font constitutes a single object in PostScript, and so can be dumped on the stack just like an integer or a literal.

The 'scalefont' function requires two arguments — the font, and the scale required. At the end of line two, the font is at the top of the stack. Line three puts the desired scale (18) on the stack, executes scalefont, which removes the font and the scale from the stack, and replaces them with the scaled font. This scaled font is then selected as the current font by 'setfont', which also clears the font from the stack.

The next line puts 72 and 72 on the stack, then executes 'moveto' which takes them off the stack and uses them as x and y co-ordinates to move to. The brackets surrounding 'Hello World' are in fact PostScript's version of string delimiters, so this line puts 'Hello World' on the top of the stack as a string, then prints it as the current position on the 'ideal page'. Note, though, that this is only written on a notional page; to commit yourself to paper, you must issue the command SHOWPAGE which starts the LaserWriter's motors churning.

Specifying a path

The second class of PostScript object is the 'path'. This is the path (or locus, if

Listing 3 Program to draw leaf pattern

Fig 4 Output of program

closed (you can force this with 'closepath'), it can be filled with 'fill'. Listing 2 shows an example of the 'path' operator. This defines a path to draw a square box, then strokes it.

This is really three examples in one.

First, the box-drawing procedure is defined.

As the procedure is in curly braces it is not interpreted immediately, but is stored in the 'userdict' stack of user-defined variables and procedures, to be called by name from the main program. Three boxes are then drawn at the current co-ordinates (specified by MOVETO). The first is outlined with the 'stroke' operator, the second filled with the 'fill' operator, and the third both filled and outlined.

There is an important point to note in this last example. The fill and stroke operators both erase the current path from the stack while drawing, so you can't use both on the same path. To get around this, we save the current graphics state of the machine by calling 'gsave' before the first operation. After the box has been filled, 'grestore' restores the previous graphics state in which the box was the current path so that it can also be stroked.

The gsave and grestore pairing are widely used to allow you to alter the origin and co-ordinate transformation system rather promiscuously, to make some special effect rather easier, and then return to a more sanitary state.

Of course, specifying the co-ordinates making up a path individually (as we did for the box) is a pretty tedious pastime for all but the simplest shapes. We can simply evaluate a formula to obtain successive points on our path. (This is what we learned at school as 'plotting the locus of a point'). Unfortunately, laser printers weren't commonplace in my school-days or my career might have taken a different path, so to speak.

The third line of the simple example shown in Listing 3 shows the promised trick for converting from your desired measurement units to points. The procedure 'inch' is defined as something which multiplies the top item on the stack by 72. The curly braces indicate that this is a procedure for storage on

the userdict stack and not for immediate execution. In use, a line like:

```
1.5 inch 2.5 inch moveto
108 180 moveto
```

saving you the bother of making the conversion. Another point in the program is the use of a conditional clause, the IF...ELSE construct. A logical test is performed, in this case comparing two values with the EQ command, which leaves a Boolean (true or false) on the stack. The IF...ELSE takes a Boolean and two procedure names off the stack and executes the first procedure if it finds true, the second procedure otherwise. There is also an example of a DO loop. In PostScript, these take the form:

```
startvalue increment endvalue
{procedure} for
```

The loop variable is put on the top of the stack for each iteration, so be sure to get rid of it (using 'pop') if you don't use it within the loop, or the stack will overflow.

Another point is that, rather than use trigonometry to calculate x,y co-ordinates from my polar co-ordinates, I simply rotated the co-ordinate system repeatedly. As the co-ordinate system went around all 360 degrees, it wasn't too important to bother with gsave and grestore, although they would have been stylish.

Of course, most fonts are defined as paths. There are two types of font: bit-map (in which each letter is specified as a series of pixels), and analytic (in which each character is stored as a path). Analytic fonts are greatly to be preferred as they scale up much better. Bit-mapped fonts in large sizes look terrible compared with analytic fonts (like Times). If you fancy your hand at specifying your own fonts, or just special single characters, then delve into the PostScript language tutorial and reference volumes.

Closed paths can be used as windows

8	8	COPY FILE(S) FROM HARD DISK TO A FLOPPY			
9	9	COPY FILE(S) BETWEEN HARD DISK DIRECTORIES			
Beginning menu Command Dos menu Maintenance Next menu exit easy					

The EASY-DOS-IT Master Menu Program is the EASY way to control your personal computer's Hard Disk.

EASY-DOS-IT uses simple DOS batch syntax to define the loading commands associated with the user menu entries, and the only limit to the number of user menus, sub-menus or tutorials is the available disk space.

Only \$ 144 (Inc.Tax)

SOFTWARE PROGRAMS ARE ONLY A KEYSTROKE AWAY! - EASY-DOS-IT menu screens list software titles by number. Simply pressing a number key gives access to your program. After leaving the program, the EASY-DOS-IT menu automatically returns. Not only does EASY-DOS-IT allow you to replace complicated program start-up commands with a simple keystroke, it also provides powerful customisation capabilities to allow unlimited user defined menus and sub-menus. All entries may be PASSWORD protected.

DOS COMMANDS ARE ONLY A KEYSTROKE AWAY! - EASY-DOS-IT includes an alphabetic listing of DOS commands which can be executed at the touch of a finger. Perform commands like CHKDSK, DISKCOPY and FORMAT without the struggle of DOS syntax.

SUITABLE FOR LOCAL AREA NETWORKS! - Users of local area networks will appreciate the control and security afforded by EASY-DOS-IT. A network user with EASY-DOS-IT can tailor their menu screens to allow single key access to only those applications available on the network that interest them. Not only is it an ideal method of presenting network users of new facilities, but also allows users the luxury of not having to remember how to start infrequently used or complex procedures.

Includes KEYBOARD PIPING and other facilities

Listing 4 Demo of clipping path

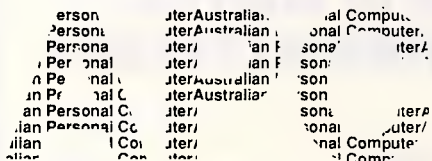

Fig 5 Output of program

through which other patterns can be seen. They are known as clipping paths, as they clip the outlines of other components of the picture. In the example below, we set up a clipping path made of the outlines of a huge (156 point) 'APC', then filled the page with repeats of a tiny 'Australian Personal Computer'. Only those that are within the clipping path reach the paper (Fig 5).

'Charpath' takes a string and produces a path according to one of two algorithms (governed by the selection of true/false). 'Clip' then takes the path and uses it to clip the ideal page. The page is then filled with two nested DO loops.

Stopping startup!

The Apple LaserWriter is notorious for wasting a sheet of paper, every time it is switched on, by printing a 'startup page'. Rooms in which LaserWriters are situated are readily identifiable by the sheaves of scrap paper littering all available surfaces and covering the place where the wastepaper basket was once rumoured to be. In fact, there is a way of turning the startup page off, described in the *PostScript Language Reference Manual*. Not only does it save paper, but it cuts the machine's warm-up time from 50 to 25 seconds! So even if you aren't too interested in PostScript programming in general, this little trick will make you a local hero.

Send the program shown in Listing 5 to the LaserWriter (from a Macintosh, use a comms program or the PostScript facility of CricketDraw). The zero in the first executable line is, in fact, the default system administrator password for the interpreter. Issuing the password takes you to a privileged level where the printer operation can be reconfigured permanently and a warning to that effect is sent back to the terminal.

The password can be reset in a similar way to the startpage, using the 'setpassword' operator. In fact, several of the persistent parameters for the LaserWriter can be changed using programs such as this; the only one that everyday Mac users may have come across is the renaming of the printer, using the 'setprintername' operator.

Beware, though, when playing with such programs. The first line of the program exits from the server environment, making your changes permanent. You could stop the printer from working permanently if you did something silly, so read the *PostScript Language Reference Manual* before experimenting. Note the equals sign in the lines:

```
dostartpage = flush
```

'Dostartpage' puts a Boolean value onto the stack, according to whether the machine is set to produce a startup page. The equals sign is an important way of interrogating the stack. It sends the value at the top of the stack to the terminal. 'Flush' is used to empty the terminal output buffer, to make sure you get the information immediately. This type of construct is very useful in getting information back from the machine when a program is running. In this case, the messages returned are true then false.

The startup page on the LaserWriter is more interesting than it might appear. As well as the number of pages printed so far and the name of the machine, several operating parameters are encoded into the picture. For example, the number of ticks on the left-hand graph shows the rotary switch setting: 0=1200 baud, 1=9600 baud, 2=Special, 3=Appletalk. The height of the bars in the centre graph shows the baud rates of the 9-pin and the 25-pin connectors, and the colour encodes the parity setting.

As a precaution, perhaps it may be useful to keep the startup page under some circumstances.

The image operator

If you can wait long enough for the serial data to be transferred, the LaserWriter makes an excellent and easily cus-

```
% stop startup page by changing the
% setdostartpage persistent parameter
serverdict begin 0 exitserver
statusdict begin
dostartpage = flush
false setdostartpage
dostartpage = flush
end
```

Listing 5 How to turn off the LaserWriter startup page

tomised graphics screen-dump engine. The key to this is the image operator, which acts on a 2-D greyscale bit-map of an image. This allows you to use the LaserWriter as an excellent multipen plotter, or as a printer of digitised video images.

All you have to do is scan your computer screen with a pair of nested DO loops, and send the pixel values sequentially to the LaserWriter! By default, data is sent as successive rows from left to right, and starting from the bottom. Even this, however, is readily altered with a scaling matrix. The general format of an image-dumping PostScript program is shown in Listing 6.

The key point to note is the format of the data stream. As PostScript only recognises printable values of ASCII, you must send binary data as a hexadecimal version of the value, as described above. So, 255 would be sent as the two ASCII characters 'FF'. A simple Basic function to do this conversion would look like:

```
a$="0123456789ABCDEF"
DEF FNbin_hex (n) = MID$
(a$,n DIV 256,1) = MID$(a$,n
MOD 256, 1)
```

The program as it stands expects 256-greyscale data, whereas few micro displays have such resolution. The simple answer is to scale each pixel to occupy the full range. For example, if in your dialect of Basic, POINT(x,y) returns a greyscale value from zero to seven, you want

```
FNbin_hex( POINT(x,y) * 32)
```

Of course, this rather slow to calculate but nothing like as slow as the serial data transmission, as each pixel is being represented by one byte and two characters. An alternative is to tell the PostScript interpreter that you are sending 4-bit data, by changing the line:

```
x y 8 to x y 4
```

Then each character corresponds to one pixel. For large screendumps, it is a bad idea to load all the pixel data onto the printer's stack before calling the image operator to unload it. The stack has a limit of a few hundred items, so the program will crash. Instead, put a procedure in the braces, which produces one line of data at a time. 'Image' will call the procedure repeatedly until the right

Which software package are you going to buy?

Read the reviews? *Unsure of the bias of the reviewer?* Heard some rumours as to "the flavour of the month"? *But does it do what you want?* If only you could borrow it for a few days...

Well now you can!

OptSoft is the Authorised Australian Distributor for the following optimum software solutions for **your PC**.

enable

the full featured word processing, database, spreadsheet, graphics and comms package with stand-alone package performance tightly integrated into a windows environment — now available in a LAN version complete with intelligent record and file locking to protect data integrity

The Genius

the genealogy program written here in Australia to assist you in organising your family tree in our bicentennial year

Le Menu

the hard disc management tool which sold over 500 copies the day it was released in December 87 and features menu-driven DOS functions and customised security menus to protect your applications plus detailed project reporting

WRITE NOW

inexpensive intuitive word processing complete with an on-line Australian dictionary and a think-ahead feature which completes words for you as you type

Res.Q

the memory resident program that periodically copies the complete status of your PC's components to the hard disc to enable total recovery after a power failure or system crash

Le Print

near typeset quality publishing for your dot-matrix or laser printer, including import of graphic images and an infinite number of fonts in 15 type faces, including foreign, math, greek and special characters

IBIS

full functioned accounting modules which may be purchased separately or combined to give you a totally integrated business information system at a fraction of the cost of its competition

WORDLORD^{Super}

an exceptional word processor complete with an advanced data manager, graphics drawing and font editing ability, Australian spelling checker and advanced mathematical formatting features to enable automatic typing of invoices, etc

We are presently setting up centres throughout Australia where you can borrow any of these excellent products for a few days. Pay a deposit (refundable). See for yourself how easy the manuals are to follow. Put the software through its paces. Compare the features, functions and performance to similar products. Evaluate our comprehensive training programme... and when you are satisfied that our software does the job **you** want... return the loan copy and ask your Authorised OptSoft Dealer to order you in a fresh copy. What could be easier? You are not under any obligation and you are able to make your purchase with absolute confidence. Why buy something which someone else says is the "flavour of the month" and risk leaving a bad taste in your mouth?

Please phone (02) 680-3930 for the name of your nearest Authorised OptSoft Dealer, or, send OptSoft a written request for a loan copy, and include \$25 to cover the cost of overnight courier delivery and insurance, and we will send you a loan copy direct.

This advertisement was produced exactly as you see it using LePrint typesetting software.

OptSoft Pty Limited, 261 Old Northern Road, Castle Hill, NSW, 2154.

Throttle back if it's too fast!

NEW WORDSTAR 2000 RELEASE 3

\$625*

WORDSTAR — The world's best selling word processor.

\$625*

\$195*

EASY: Typewriter simplicity and word processing power.

With almost 400 new features Wordstar 2000 Release 3 means you can do less and achieve more. And at lightning speed.

It can jump from beginning to end of a 100 page document — and back again — in less than a second. Scrolling is so fast we've fitted brakes — Cruise Control allows you to set your own pace.

And outstanding versatility in the use of text, graphics and illustrations makes the Release 3 an ideal Word Publisher where layout and presentation is important. Wordstar Companion Programs feature Fill-a-form, Showtext and PC-Outline which provides

for filling in of pre-printed forms, creating overhead transparencies and organising thoughts and facts prior to writing.

An extended Help facility brings a new dimension to computing assistance.

number of pixels has been read.

A powerful application of the image operator is to plot a mathematical function. If you wished to plot $z=f(x,y)$ for a range of x and y values, you could set the computer calculating each value in turn and sending the results to the LaserWriter; or you could simply program the LaserWriter to calculate the points directly. The image operator needs a 2-D array of greyscale value, but doesn't care where it comes from. So, instead of an array of data, you need only provide a procedure which generates the data. Shown on the first page of this article is a printout of the Mandelbrot set, which enthralled so many people after that classic 1986 *Scientific American* article — be prepared to wait for your output, though.

50,000 employees are now being paid using the Lewis PAY-PACK payroll package.

PAY-PACK does all aspects of your pay processing: pay slips, tax calculations, holiday and sick accruals, management reports, group certificates. PAY-PACK is used by over 500 firms, ranging in size from companies with three employees through to BHP.

Over fifty new features have just been added to PAY-PACK in Version 4, including:

- Employer Superannuation Contributions;
- Holidays can be recorded in days or hours;
- Rostered Day Off accruals;
- Tax averaging for sales commissions;
- Monthly reports.

There are also extra options for:

- Direct entry of bank deposits (\$300);
- Labour Job Costing (\$990).

HOT-LINE SERVICE

We offer telephone assistance daytime, evening and weekends. We understand the urgency of any operational questions about payroll.

DEMO PACKS

Demo packs, which contain the manual and complete program are available at only a fraction of the price. Not just a fancy scrolling display with impressive graphics but the real program. Actually test it out on your own computer! If you like the program you pay the balance of the price.

The programs are available for MS/DOS. Available for Macintosh except LETTER MAGIC.

CUSTOM-MADE SOFTWARE (SALES) PTY LTD

P.O. Box 507,
Randwick NSW 2031
Tel. (02) 399-8566

Dr Geoffrey Lewis. In 1965 he was selected by IBM to demonstrate the new System 360. He was selected following a sensational score of 150 out of 120 in a university test for mathematical aptitude. He was awarded the extra points for exceptional problem solving ability and in the next ten years nobody else got more than 75 marks. He has applied his problem solving ability in producing four software packages written for Australian conditions.

Lewis LETTER MAGIC

Most wordprocessors let you do all forms of word processing: letters, articles, books, price lists, footnotes and computer programs. They become top-heavy with features and hard to operate.

LETTER MAGIC concentrates on only one application, the very important one of writing letters. Your letter automatically starts with the date, name and address of the person you are writing to. Standard letters, paragraphs or phrases are easy to do. Sign-off your letter with one key-stroke.

LETTER MAGIC has a database for names, addresses and other information. You can send the same letter to many names. You can produce address labels, telephone lists, fees due notices.

"If your primary need for a wordprocessor is letter writing, then Letter Magic is worth your attention, regardless of the word processor you are currently using." Ewart Stronach, Your Computer, December 1987.

If you are self-employed or run your own business, Lewis CROSS-CHEQUE will help you keep your accounts in order.

To help in preparing your tax return, CROSS-CHEQUE prints reports detailing each income and expense category.

CROSS-CHEQUE helps you run your business by keeping track of income and expenditure.

You enter details directly from cheque butts or deposit slips. You can split any cheque across several expense accounts. Handles 120 categories of income and expenditure. Allows you to do bank reconciliation.

There are over 700 users of CROSS-CHEQUE.

"If ever there was a small software accounting system that could be described as ideal for the very small business, Lewis CROSS-CHEQUE would fit the bill." Dan Lawrence, Your Computer, August 1986.

Lewis CASH FLOW

For personal use or for business use.

You enter details of your future transactions for receipts and payments. Specify whether the transaction is one-off or recurs every so many weeks or months. Starting with your account balances, CASH FLOW gives your cash position at any point in the future. This helps you make financial decisions, e.g. when to shift funds between cheque and savings accounts.

Mystery tour

The myriad mysteries of the many modem standards are unravelled this month, as Peter Tootill and Steve Withers simplify the main points.

There are two major hurdles to overcome in connecting a computer to a telephone line. The first is that computers use 'parallel data' — that is, data carried on a lot of wires (usually 16) simultaneously. Telephone lines have only two. Furthermore (and here's the second problem) it is 'digital data'. The signal is either on or off: 5 volts or 0 volts, there is nothing in between. Telephone systems use 'analogue data', which means that the signal is continuously variable. Many technical and computing books will explain the differences between parallel and serial, and digital and analogue data.

The first of the problems mentioned above is dealt with by the computer's serial interface. It takes the parallel data from the computer's data bus and converts it into serial data — that is, data where bit follows bit. The modem's job is to deal with the second problem. It converts (modulates) digital data into analogue data and back again (demodulates); hence the name MODulator/DEModulator.

The serial interface is often called an RS232 or V.24 interface after the two standards that specify it. The first is American in origin, but is widely used now. The second is the international standard set out by the CCITT (the Consultative Committee on International Telegraphy and Telephony) which is part of the International Telecommunications Union, a UN body. The two standards are functionally the same.

Synchronous & asynchronous modems

When the computer's serial port is decoding incoming data, it needs timing

Standards comparison					
Modem type	Data rate (bps)	Transmission technique	Modulation technique	Transmission mode	Line use
Bell System					
103	300	asynchronous	FSK	Half, Full	PSTN ¹
202	1200	asynchronous	FSK	Half	PSTN ¹
212	0-300	asynchronous	FSK	Half, Full	PSTN
	1200	asynchronous/synchronous	PSK	Half, Full	PSTN ³
CCITT					
V.21	300	asynchronous	FSK	Half, Full	PSTN
V.22	600	asynchronous	PSK	Half, Full	PSTN/Leased
	1200	asynchronous/synchronous	PSK	Half, Full	PSTN/Leased
V.22 bis	2400	asynchronous	QAM	Half, Full	PSTN ⁴
V.23	600	asynchronous/synchronous	FSK	Half, Full	PSTN,
	1200	asynchronous/synchronous	FSK	Half, Full	PSTN
V.26	2400	synchronous	PSK	Half, Full	Leased ⁵
	1200	synchronous	PSK	Half	PSTN ⁵
V.26 bis	2400	synchronous	PSK	Half	PSTN ⁵
V.26 ter	2400	synchronous	PSK	Half, Full	PSTN ⁵
V.27	4800	synchronous	PSK		
V.29	9600	synchronous	QAM	Half, Full	Leased ⁶
V.32	9600	synchronous	QAM	Half, Full	PSTN

Notes

2 Rarely used

3 This mode compatible with V.22

4 Also used in North America

5 Rarely used with PSTN

6 Half-duplex variations for switched lines exist

information so that it can tell where one bit stops and the next one starts. With a synchronous modem, accurate timing circuits are used (these are usually built into the modems themselves, but may occasionally be provided externally — for example, by the computer itself). The modems synchronise their timings by means of occasional special characters called SYN characters.

Asynchronous modems, however, start and end every character with what are called start and stop bits. As these are 0 and 1 respectively, it means that the start of every character is identified by the transition from a 1 to 0 bit. Thus, the modem only needs to work out timings for a relatively short period (one character length). No expensive timing circuits are needed, and synchronisation is

COMMUNICATIONS

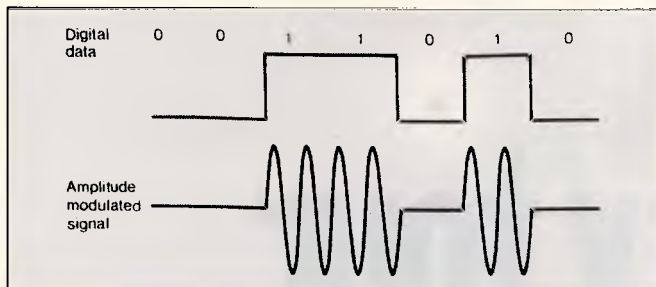

Fig 1 Amplitude modulation

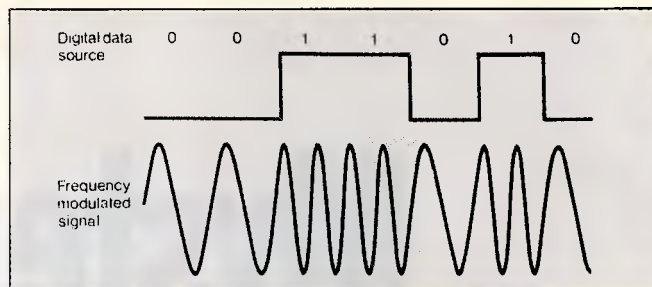

Fig 2 Frequency modulation

automatic. It does mean that two extra bits are added to each 8-bit character, making 10 in all. That's why 300 bits/sec is only 30 chars/sec, and not 300 divided by 8 (37.5).

Modulation methods

The three basic methods of modulation are:

Amplitude modulation The strength (or amplitude) of the signal is changed to convey the information. This is used in AM radio (Fig 1).

Frequency modulation The frequency of the signal is changed to convey the information. This is the method used in FM

radio, and the simplest version is used in 300-baud modems. Two frequencies are used: one to represent 0, and one to represent 1. In this context, it is usually called frequency shift keying (Fig 2).

Phase modulation The phase of the signal is changed. Usually referred to as phase shift keying (Fig 3).

Some modems combine two of the above methods, but I'll consider that when I look at higher-speed modems later.

Bits & bauds

Bits per second (bps) and bauds are both methods of measuring the speed of

data transmission. Many people use the terms interchangeably, but there is a significant difference. I'll do my best to explain it.

As we have seen, the data being sent consists of a number of bits. So, the speed of transmission can be measured in bits per second. If you look up the word 'baud' in a data communications book, it will probably refer to modulation rates or some such thing. In fact, a baud is the unit used to measure the speed of change of the signal on the telephone wire itself, which is not necessarily the same as the speed of the data that is being sent.

This is where the difficulty arises. You

have to divorce the two in your mind: the rate of change of the data signal on the phone line is not necessarily the same as the speed of the data it contains. Read on: it will become clearer.

Using a 300 bps modem, as we have seen, there are two different signals: one for 1 bits and one for 0 bits. Each signal level represents one bit so here the baud rate is 300, the same as the data rate. However, if we use a different signalling method — say, for example, we have

SELTIC

LOW-LOW-LOW-COST PROGRAMS

Out of the thousands of programs we have collected, for a small service charge we bring you a **SELECTION OF THE BEST** that have been carefully tested and documented. Suit IBM-PC and compatibles. 5 1/4" and 3 1/2". Dos 2 or greater.

Please note that in those instances where Basic is required, users should have Basic, GWBasic, or our shareware compatible version on disk M9001. Basic2 is not suitable.

Our games disks have a CGA emulator so those with Hercules boards can also play.

MS-DOS GAMES

M1006: CHESS. Several extensive versions with graphics. Includes Mychess. Well written.

M1008: SELECTED FAMILY FUN GAMES. 2 Flight Simulators, Music generator, excellent Pacgirl, Space Wars, etc. Some need Basic.

M1022: SUPER COMPILED GAMES (3). Arcade-type games. Includes Kong, Striker, Spacevade, Life2 and Frog.

M1041: GAMES OF STRATEGY (1). Match wits in a Naval Battle Simulation, Big Truck haulage Business, and the Stock Market.

M1046: SUPER COMPILED GAMES (5). With World Domination (Risk), Beast, Rockets, Sub-chase, etc.

M1051: 50 BASIC GAMES. Includes a Startrek, Swamp, Baseball, Hobbit, Blackfri, Antonyms, many more. Needs Basic.

M1068: STRIP POKER. An exciting way to pass an hour or two. If only you had partners like these! Needs Basic.

M1070: PROVOCATIVE PICTURES (3). A collection of girly pics with Mac-type graphics. Some animated. Not for children.

M1078: NOT GENERATOR FOR GAMES. Produces solar systems for science-fiction role-playing games. Generates, edits, stores systems and maps.

M1079: GAMES FOR THE UNDER B'S (2). Suits young children. Pacman-type, plus entertaining educational games for alphabet, counting, adding, subtracting, telling time.

M1080: RAILROAD SIMULATION. For all kids at heart! On screen tracks and animation. Choose a variety of tracks, redirect the train etc, etc.

M1081: PROVOCATIVE PICTURES (4) - 1988 CALENDAR GIRLS. Sixteen different girls immodestly illustrate 12 months calendar for 1988. Pin-ups for printing.

M1082: SUPER COMPILED GAMES (8). Arcade-type versions of 21 (pontoon), Lazy Monday, Galaxy-type Space Shootout, Sopwith (Bi-plane dogfight simulation).

M1083: BIBLE QUIZ. Trivia-type game with 1000 multiple-choice questions drawn from the Bible.

UTILITIES

M2016: MENU SYSTEMS. Create your own menus. Contains Systemu, Automenu and EZmenu.

M2025 + : DOS EXTENSIONS. Two disks of extensions for the command of Dos. Similar to your operating system, with more features. Eg. copy command accepts multiple statements on a line. \$24.

M2035: MORE HARD DISK UTILITIES. Super collection for optimising disk usage, undeleting, etc.

M2048: PAL FOR SIDEKICK. Special enhancement for SK's appointments' calendar, plus an alarm clock.

M2049: INTEGRATED UTILITY FOR PERSONAL MANAGEMENT. Like Sidekick, with calculator, notepad/editor, appointments calendar, address database, cut and paste, file management, etc.

M2051: VIDEO/MONITOR UTILITIES. Special collection to extend control over cursor, set screen colour, blank screen, better scrolling, etc.

M2061: HARD DISK UTILITIES (3). New collection. Super undelete, AT diagnostics, easy path find, hard disk directory, better backup utilities.

M2062: MAGIC MENUS. Superior Dos front-end that lets you create your own menus. Full-screen edit; pop-up menus for directories, dos commands, calculations, printing, etc.

TOP QUALITY PUBLIC DOMAIN & USER SUPPORTED SOFTWARE

WORD PROCESSING/ PRINTING

M3003: MULTIFONT WRITER. Gives on-screen scientific notation, Greek letters, gothic, bold, italics, etc. Recommended.

M3007: SPELLING CHECKER. Our 1988 version has thousands of new words added, incl business/computer terms. Works with most word processors (not Amstrad version of Wordstar).

M3014: SIDEWRITER. Generates printed output sideways to fit wide reports onto a page.

M3020: EXCELLENT WORD PROCESSOR. Compatible with Wordstar. Has clear, easily followed commands on screen.

M3021: QUALITY MULTI-FONT PRINTING. on dot matrix, incl Courier, Greek, Helvetica, Palatino, Roman, Italics, etc.

M3025: TOUCH TYPING TUTOR - PRACTICE AND EVALUATION. Lets you read text from screen, use own text, reports speed/accuracy.

M3031: SCREEN GRAPHICS FOR WORD PROCESSING. Does fancy borders and lines for screens, tables, charts.

M3032: MERGE FOR WORD PROCESSING. Controls small database for names, addresses, etc, which it adds to form letters to personalise.

M3033: SUPER FOG INDEX. Examines your text for readability and complexity. Helps you judge whether your talk or article is suitable.

M3034: VERSATILE PRINTER SETUP. Printer controls can be configured for many printers, including IBM, Epson, Okidata, Gemini, NEC, Laserjet, which are preset.

M3035: PRINTER UTILITIES for Epson compatibles. Produces justified copy on dot matrix, has memory resident setup utilities, multiple font printing, etc.

M3036 + : FULL-FEATURED WORD PROCESSOR WITH C SOURCE. Many features that you can use and routines that you can borrow, modify, learn from in your own programming. 3 disks.

M3037: WORD PROCESSOR THAT INPUTS SPREADSHEET VALUES. Transfer figures from spreadsheet to include in reports. Will also update changes in value.

M3038: DESKTOP PUBLISHING. Word processor for high quality printing, multiple columns, extended ASCII (solid lines/borders, foreign characters), more/less lines per page, variable print size, merge files, etc.

GRAPHICS

M4001: SELECTED GRAPHICS. Some of the best programs, including a picture-graphics set of commercial standard.

M4002: SLIDE PRESENTATION. Prepare transparencies for overhead slides.

M4014 + : COMPUTER-AIDED DESIGN. Dancad-3d will do complex drawing, 2 or 3 dimensions, sharp lines for mechanical drawing, illustrations, animate parts. We've squeezed 4 disks on to 2. \$24.

M4019: FORM DESIGNER. Perhaps the best available for designing your forms layout. Suits invoices, order forms, letterheads.

M4026: 3D-GRAPHICS. Gives wire frame modelling; will move, tip, change scale, rotate.

M4027: CURVEFITTING FOR GRAPHING RAW DATA. Produces least squares fit on X,Y data. Curves for 25 equations.

LANGUAGES

M9001: BASIC/GWBASIC COMPATIBLE INTERPRETER. Runs programs written in industry standard Basic.

M5026: MACRO-ASSEMBLER. If you didn't get one with your computer, this is one of the best.

M5033: TURBO PASCAL ROUTINES FOR HERCULES GRAPHICS. Now includes two CGA emulators (compiled) for running on Hercules Board many programs intended to run with Colour Graphics Board.

M5039: FLOW CHART DESIGNER. Puts flow of operations on screen for system or program design.

COMMUNICATIONS

M6014: SUPER NEW COMMUNICATIONS. Telix is powerful, yet easy to use, menu-driven. Contact bulletin boards.

M6017: MINIHST BBS. Personal bulletin board for small business use.

M6018: MEMORY RESIDENT COMMUNICATIONS. Does file transfers in the background, freeing your computer for other tasks.

CALCULATION/BUSINESS

M7001: GENERAL LEDGER ACCOUNTING. Has Gledger, Cash Book, Profit/Loss, Balance Sheet, Prints cheques. Data can be read by Lotus 123. Easy to use.

M7004: STOCK MARKET ANALYSIS (1). Special aids to help you "think and grow rich". For managing and evaluating portfolios and prospects. Needs Basic.

M7015: PROJECT MANAGEMENT. Handles 1000 tasks; does critical path analysis, cash flow, bar charts, cost reports. Needs Basic.

M7016: STOCK CHARTING SYSTEM. records highs, lows, volumes, moving averages for stock market prices and charts for you. Needs Basic.

M7023 + : SINGLE ENTRY ACCOUNTING. Simple approach that handles general ledger, accounts receivable, accounts payable, inventory, payroll, depreciation. Two disks. \$24.

M7031: PERSONAL FINANCE MANAGER. Manages cheque and credit card accounts, savings, purchases, withdrawals, interest, budgets.

M7041: MEMORY-RESIDENT SPREADSHEET. Full featured; at hand when you want it; insert calculations into text, etc.

DATABASE

M8003 + : FAMILY TREE/GENEALOGY. Recording, grouping, tracing, printing family tree. In Basic. Two disks. \$24.

M8009 + : NEW DATABASE MANAGER. New version. 120 fields, 16 million records, fast sorting, fields anywhere on screen. Calculations. Two disks. \$24.

M8012: LABEL PRINTING. Collection that allows you to print labels for all sorts of uses, as well as control mailing lists.

M8018 + : DBASEIII COMPATIBLE DATABASE MANAGER. Bargain, with similar features to DBASEIII and is compatible with files generated by it. 2 disks. \$24.

M8025: MEMORY-RESIDENT DATA MANAGER. Manipulates small databases & lists, does editing, changes fields, sorts, splits, combines files. Up to 1000 records.

M8026: NETWORK DATABASE. Maintains file-card type entries in a local area network (LAN). Needs Dos 3.1 or later.

M8027: ON-LINE MANUAL FOR DBASE3 & CLIPPER. Call for pop-up help when you're stuck for correct syntax, etc.

M8028: DOCUMENTATION SYSTEM FOR DBASE2/3, CLIPPER, FOXBASE. Gives paths, program tree structure, lists files used, gives summary of variables, procedures, indexes, cross-references.

M8029: DBASE3 BUG FIXES AND HINTS. Special collection to assist with the anomalies and idiosyncrasies of Dbase.

EDUCATION

M9001: GWBASIC/BASIC COMPATIBLE INTERPRETER. With tutorial. Suits compatibles.

M9003: MATHS TUTOR. Program in Basic that suits first six years of schooling.

M9004: PC-TUTOR. Learn more about the operation of your computer, the important commands, etc.

M9007: SECONDARY MATHS. Programs in Basic for trig / complex functions / logarithms / slopes / coordinates / line equations / determinates, etc.

M9014: MATHEMATICS LEARNING GAME. Fascinating way for primary children to learn their numbers and do elementary arithmetic.

M9018: EDUCATIONAL GAMES FOR PRE-SCHOOLERS. Fun with words, letters and numbers.

GENERAL

M9518: PIZZA RECIPES. Collection of hints and recipes for cooking better and more varied pizzas.

M9521: STRATEGIES AND PROBLEM SOLVING. Analyse, plan, understand and act on a specific issue you may face.

SELECTED

BEST OF THE BEST!!

DISK OF THE MONTH SERIES— NEW RELEASES MONTHLY

Every month we examine hundreds of programs collected from our world-wide sources — from UK, USA, Canada, Europe, Australia and New Zealand — and select for release in our catalogue those we consider to be the most outstanding public domain and user-supported programs.

In our search we also discover some gems that stand out even in this select company; so each month we gather this special collection on to a single disk — a minimum of eight fully compiled programs — utilities, graphics, business, scientific, printing, wordprocessing, games, educational programs, etc. Most are completely new; in some cases it's a recent update of a classic program. These disks are released as part of a subscription series — the Best of the Best — at a price which is far less than if you bought the disks individually. And our subscription price INCLUDES taxes and postage/packing.

Our present Best of the Best series is for MS-DOS machines — the IBM-PC and close compatibles. 5¼" and 3½" disks are available.

SPECIAL BONUS OFFER!

If you subscribe now — in addition to the 12 disks of the Best of the Best Subscription Series — we will include a bonus disk of your choice that may be chosen from our advertisement on the facing page (single disks only — not sets, which have a plus sign as part of the catalogue number). Simply add the catalogue number to your subscription order. You will receive the bonus disk with your first subscription disk. See details on the coupon below.

MAIL AND TELEPHONE ORDERS:

four different signal levels — then each level can represent two bits (there are only four possible combinations of two bits: 00, 01, 10 and 11). If we keep the same baud rate (remember, baud measures the rate of change of the signal) we could send twice as much data — 600 bits per second at 300 baud.

As I'll describe later, the newer V.22 and V.22bis modems actually transmit and receive at 600 baud, but by encoding two and four bits respectively, the data is sent at 1200 and 2400 bits per second. A two-bit combination is called a 'dibit' and a four-bit one a 'quadbit'.

You may be wondering why we need these different signalling techniques. Why not just send data at 2400 baud if we want to transmit at 2400 bits per second — it sounds much simpler. Well, it would be, but the problem is with the telephone line. It can only handle frequencies between about 300Hz and 3300Hz, so we have a bandwidth of 3000Hz available which is fine for speech but not so good for data.

The theoretical limit for the baud rate on a phone line with a bandwidth of 3000Hz is 3000 baud (based on a formula derived by a gentleman called Nyquist in 1928, and which is sometimes

called the Nyquist Limit). That sounds fine — 2400 is less than 3000, after all. True, but the problem is that we normally want full-duplex transmission transmitting data in both directions at once.

Furthermore, the closer we get to the limit, the more difficult it becomes to keep the signals clean and to avoid errors being introduced by line noise. Modern high-quality modems do use baud rates of 2400 and even slightly higher, but normally only in one direction at a time.

The most common modems available for use on the ordinary public switched telephone network, or PSTN (usually referred to as 'dial-up' lines) operate at speeds up to 600 baud full duplex. The main exception to this rule is the V.23 modem which works at 1200 baud (and 1200 bps) in one direction and 75 (bits and baud) in the other.

Which is which?

Most modems found in Australia comply with a range of standards specified by the CCITT. These standards begin with the letter V — V.21, V.22, and so on. In the US, modem standards used to be set by the Bell telephone company, but

now there is a move towards using the international CCITT standards.

Bell standards are not usually compatible with CCITT ones. In the high-speed area (above 2400 bps) there are also variants of CCITT standards. The 'Standards comparison' box summarises the main modem standards commonly used on dial-up lines.

Medium-speed modems

Until recently, 300 bps was the normal operating speed for modems. However, this is rather slow (around 30 chars/sec) and the introduction of IC technology has meant that modems operating at higher speeds can now be made at reasonable cost.

V.22 (1200 bps full duplex) looks like becoming the standard for Australian users. It gives good performance over dial-up lines without requiring error correction (such as MNP) in the modem itself; and — most importantly — prices have fallen to a level that any serious user can afford.

V.22bis is twice as fast (at 2400 bps full duplex) but needs good phone lines to work satisfactorily. However, it is expensive. There are probably good reasons for it (like economies of scale), but US prices are much lower. There, V.22bis

CT1188 UPDATE

COMMUNICATIONS

modems can be bought for under \$US200 (say \$270). In Australia, expect to pay \$400 or more.

High-speed modems

9600 bps modems are the latest thing to appear on the comms scene, but there are, unfortunately, several incompatible standards covering them (see the 'Standards comparison' box).

The main CCITT standard (also used in the US) is V.32. This uses a complex modulation method with quads (4 bytes per baud) at 2400 baud, and a combination of amplitude and phase modulation called quadrature amplitude modulation (QAM) (Fig 4). It also transmits over the whole bandwidth in both directions at the same time for full duplex working. So, to avoid mixing up incoming transmissions with outgoing ones, sophisticated echo cancellation techniques are needed to filter out the outgoing transmissions and leave just the incoming signal for demodulation.

Error correction is built into the signal by adding extra bits in a pre-determined pattern (called trellis code modulation — TCM). The receiving modem knows what these bits should be, and that helps it to make allowances for line noise and sort out the original signal.

This system has the advantage of allowing the receiving system to correct most errors without having to ask for a block of data to be sent again (unlike other systems such as MNP) so there is no reduction in throughput. However, TCM is not perfect, and an ARQ (Automatic Repeat on reQuest) system such as MNP is still desirable.

V.32 modems are expensive, at around \$5000. This is about the same price as UK buyers face, but in the US \$2500 is the going rate.

Another CCITT standard for 9600 bps is V.29. However, this was primarily designed for use on leased lines where there are four wires — two for the transmit and two for the receive channel. Hence, when it is used on ordinary telephone lines, it has to be used in half-duplex mode — alternatively transmitting and receiving data on the same frequency.

Hayes and US Robotics in the US, produce 9600 bps dial-up modems using V.29 methods, and they get round the half-duplex problem by using FPPS, which we are told stands for 'fast ping-pong system'. Basically, the modems bounce back and forth between transmit and receive modes. They do this with clever internal software, and present what appears to the computer to be a full-duplex system. This is good enough for most purposes and avoids the need for expensive echo cancellation.

The main problem is that Hayes and US Robotics modems don't work in quite the same way and they currently cannot 'talk' to each other, although the two companies are co-operating in an effort to sort this problem out.

A new way?

Until now, all modems have transmitted data on one basic frequency or channel. This is often referred to as a carrier. Even the V.32 modems use one basic frequency which is modulated in a complex manner to carry the data.

The people at Telebit (a US modem company) went back to square one and looked at the problem of achieving high-speed data transmission. They came up with the idea of using a number of carriers, each much narrower than previous ones and each carrying a part of the signal.

The Trailblazer uses 512 separate carriers and allows data transmission at speeds of up to 18,000 bps. It uses a form of QAM that Telebit has christened DAMQAM — dynamic adaptive multi-carrier quadrature amplitude modulation (no comment!). The adaptive bit is there because it monitors line conditions and

gradually slows down if they are poor until it finds a speed they can support. CCITT standards also have what is called fall-back capabilities, but they tend to halve the transmission speed: 9600 falls back to 4800, and so on. The Trailblazer will wring every last bit out of the phone line.

The Trailblazer is available in an Australian version from Netcomm. The price of this technology? Around \$3500, giving a better price/performance than V.32 modems.

Dangerous downloads

We recently saw a Usenet news item that listed some 'contaminated' programs that are known to be circulating. We believe that some of them are genuine public domain or shareware programs that have been hacked to cause damage (like erasing disks) as a side effect, while others are single-minded attacks on the unwary. The article suggested that the following files should be avoided:

ARC.*
ARC513.*
ARC600.*

BALKTALK.*
DISKSCAN.EXE
DOSKNOWS.EXE
EGABTR.*
FILER.EXE
LIST60.*
QMDM110.EXE
QMDM110A.ARC
QUIKBBS.COM
SECRET.BAS
STRIPES.EXE
VDIR.COM

Experienced bulletin board users and operators know that detailed reports of such nasties are in circulation, making it easier to identify the offending files. The reason for raising the issue here is to warn newcomers that it's not all sweetness and light in the world of PC communications.

Computer viruses and trojan horses have been given much publicity this year. Some pundits have suggested that you can protect your system from 'infection' by using only licensed software from official distributors.

Unfortunately, this is not true. Viruses have been reported on commercial software for the Macintosh and the Amiga. There might be a bigger risk with

downloaded software, but if you only use your computer for recreational purposes and take care with backup procedures, you may decide it's worth taking a chance. If you do, you'll be in good company.

System news

It's not at all unusual for a user group to start a BBS, but we've just heard that the opposite process has occurred in Melbourne's northern suburbs. For more details, log on to the Zoist BBS — the number is given below in the 'Updates' section.

This month our thanks go to Jeff Campbell, John Fisher, Larry Lewis, and Ann Matthews for the information they provided.

WRITING PROFESSIONAL STRUCTURED PROGRAMS

Develop your own software. You can learn to write professional structured programs in the Pascal language.

No need to attend classes. Study at home using your own micro-computer. All you need is a relatively inexpensive Pascal compiler (which we can lend to you) and your own easy-to-follow self study course.

The course materials include study books, audiotapes and computer-aided learning disks which make the teacher outdated. But just in case you need one, we'll have a tutor available for you as close as a telephone. It's as easy as that.

Start any time.

Study at home at a pace that suits you. For further details send this advertisement to us or call 36 0720. R97/P

THE DEATH OF A SALESMAN.

Clients and customers often base their first impressions of your company on the way you write. There's no second chance to make a first impression, but when you're working under pressure, errors in grammar, style and usage sometimes creep into documents, letters and proposals. So a slip of the pen could kill the deal.

That is why you should take a close look at RightWriter - a software writing aid for IBM and compatible PCs. Working with all the most popular word processing packages, RightWriter flags errors in grammar, style, usage and punctuation.

It produces on-screen suggestions to help you create lean, powerful business communications. The kind of writing that makes sales instead of killing them.

But don't take our word for it, read what the reviewers have to say:

"RightWriter is a fast, handsomely packaged, easy to use program." PC Magazine.
"Few programs, if any, are likely to have a bigger impact." The Lawyer's PC.

Call us now for more detailed information on RightWriter, and find out how easy it is to commit words to paper without committing professional suicide.

\$299 plus tax, post and handling.

RIGHTWRITER

Now you can express yourself perfectly.

Using a mouse in Basic

QuickBASIC has an advantage over Borland's Turbo Basic in that it allows external object files to be linked with compiled code. Along with its mouse, Microsoft provides an object library (MOUSE.LIB), but there's no way to combine it with programs written in Turbo Basic.

I have written a set of routines in

Turbo Basic that will get around this limitation. By using Turbo's Call Interrupt command, any of the mouse services may be accessed from within a Turbo Basic program.

The demo program MOUSEDEMO.BAS (Fig 1) shows how these various subprograms may be called to turn the mouse cursor on or off and to change its shape in graphics mode.

H Chow

Using Mr Chow's subprogram as a foundation, I added an example to the demonstration that shows how to detect when a button is pressed. There are quite a few other mouse services that Turbo Basic can access using these routines.

Particularly interesting in this collection of routines is the service to alter the shape of the mouse cursor in graphics mode. The cursor may occupy an 8 by

Accelerating slow chips

I have installed an accelerator board in my IBM PC but find that the increase in speed is limited by the speed of my memory chips. I can easily replace my memory with faster chips except for the lower 64k, which is soldered in. I understand that I can fill the lower 64k to prevent access. Can you suggest a patch or a Pascal program to accomplish this?

R Sommers

A memory-resident program to 'fill in' memory up to a certain address boundary is very simple to construct. However, it may not speed up the operation of your machine as much as you would hope. Examining the DOS memory allocation plan will help you understand why.

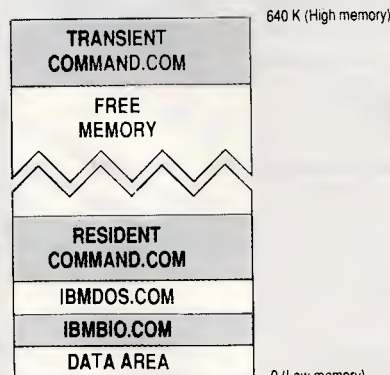

DOS is a single system that actually consists of three separate parts. The low-level BIOS interface program, **IBMBIO.COM**, works with the ROM BIOS to control the actual hardware of the PC. The DOS program itself, **IBMDOS.COM**, provides the familiar (to programmers) **Int 21h** interface and handles the device interface for disk and other peripherals. Finally, the command processor, **COMMAND.COM**, is itself divided into three portions: a resident portion, an initialisation portion, and a transient portion. The initialisation portion is thrown away after it processes the **AUTOEXEC.BAT** file, leaving memory looking something like the diagram 'DOS Memory Allocation After Running **AUTOEXEC.BAT**'.

The length of each portion of DOS varies with the version used, with 3.3 taking the largest amount of RAM. On my computer, booting with a 'small system' (no **CONFIG.SYS** file and no **AUTOEXEC.BAT** file), the free memory begins at about the 54k level. The next program to be loaded would begin there and have approximately 10k of itself in the lower 64k.

Once I add my normal **CONFIG.SYS** file, which allocates space for additional buffers and files and loads device drivers for two RAMdisks, a mouse, and a disk cache, the start of free memory has already been pushed up past the 64k boundary. Since no TSR program can get control early enough to lock out the 'slow' memory in the first 64k, the effort would be wasted.

In addition, the interrupt vector tables and ROM BIOS data areas must (by convention) be located in the lower 64k.

DOS Memory Allocation After Running **AUTOEXEC.BAT**

If these were to be moved, no program, including DOS, would function. Since most programs access these areas and go through DOS to perform file manipulation, a good proportion of the normal execution time is actually expended in the slow RAM anyway.

Note that some accelerator boards have the ability to 'backfill' memory, allowing them to substitute on-board RAM for system board RAM. Because the on-board RAM is usually accessed with a 16 or 32-bit-wide data bus and is run at a higher clock speed, performance is improved.

Rather than worry about blocking out the first 64k, why not fill it up with something useful? Many of the resident utilities published in this magazine aren't speed-critical and can make good use of small amounts of RAM. Loading them will satisfy your need to fill memory while increasing your productivity — RH.

Macintosh Word 3.0x and Excel

You're allowed to 'personalise' your master disk with Word or Excel by entering your name and/or organisation into a dialog box.

But once you've done that, all future backup copies display this information in an Info box when you open the application. The documentation states your disk will be 'permanently marked'. If you desire to change what was entered, here's the solution.

Using a file editor such as Fedit, display the application's data fork. Pull down the Options menu and select SET EOF or SET END OF FILE. Then select ZERO, which eliminates the application's data fork. The next time you run the application, it prompts you

AUTOMATIC PRINTER SHARER

From the manufacturer of the popular Blitzer range of Modem comes a family of handy printer enhancement products (PEPS).

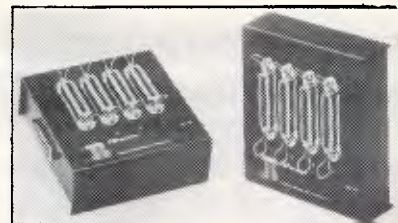

PEPsharer, the Automatic Printer Sharer, automatically connects up to four parallel printer channels to a printer, on demand. No manual switching is needed. The four input channels could be from four computers or from a mixture of computers and any other PEP.

The input channels are polled sequentially until data is found on one channel. This active channel is then switched to the printer (or output channel), and the other channels are locked out. After data transfer has ceased for a period of time, sequential polling recommences.

PEPsharer has no operational controls or commands as everything is automatic. The function performed by PEPsharer can also be fulfilled by PEPnet but PEPsharer provides a lower cost solution when the computers are close to the printer to be shared.

- Centronics Parallel interface compatible, all signals processed, even the rarely used ones.
- Four input channels, one output, inputs polled sequentially.
- The polling rate and release time are switch selectable to accommodate differing installation requirements. Once set for a particular installation, the settings do not need to be altered.
- There is one Status Indicator for each channel to indicating polling and the selected channel.
- All data is handled transparently by PEPsharer so graphics data may be printed without difficulty.
- The input connectors are Centronics sockets to suit the printer end of any parallel printer cable.
- The output connector is a 25pin D type to suit a standard IBM PC printer cable.
- Approval now obtained.
- PEPsharer comes packaged in a smart full color box with:
 - Power pack with plug to suit the destination country
 - Wall mount screws (the box has a built in wall mount base plate)
 - Desk mount rubber feet
 - Printed Manual in Proper English

\$295

The PEP family also includes:

PEPbuffer - A smart 256kb parallel buffer with a multiple copy facility

PEPswitch - To switch between printers from your keyboard

PEPnet - The single cable printer sharer system, consisting of 1 master, from 1 to 30 slaves

PEPchex - To establish a parallel link with a printer up to 1,000 metres away from your computer.

Finder

When using the Macintosh Finder to copy a disk, you can avoid typing the new disk name. Simply click on the icon of the original disk and select COPY from the Edit menu (COMMAND-C), then click on the icon of the disk you want to name or rename and select PASTE (COMMAND-V). You will have to add to the name or move the duplicate file to another folder since you can't have files with identical names in the same folder.

W Sacco

Jazz

When using Jazz or other programs on the Mac that don't let you delete files from within the program, the following technique helps you purge obsolete versions of files.

For the files you want to delete, use SAVE AS and add a '-T' (short for Trash) to the end of the file name. When you QUIT the application and return to the Finder with BY NAME chosen for the View, every file that should be deleted now appears twice, once with the original name and once with the '-T' suffix. Just carry both copies to the trash.

J Zarkin

Snapshots on the Mac II

In order to get COMMAND-SHIFT-3 (the System utility that creates MacPaint-type snapshots of the screen) to work on a Macintosh II, configure the video card to use only two shades of grey. If the card is configured for 4 or 16 shades, the COMMAND-SHIFT-3 combination won't work.

G Mushlin

Drive select

When presented with a Save or Open dialog box on the Macintosh, pressing the Tab key is a short cut to clicking on the Drive button. It selects the next available disk drive.

J Haslup

Triplets

By setting BELOW and DOUBLE borders on the paragraph menu of Word for the Macintosh, you can obtain a double line beneath a paragraph.

Then, on the paragraph directly below

that one, set the borders for DOUBLE and ABOVE. The result is an interesting group of three horizontal lines, as shown

take in figure

M Elenko

Macintosh System

There's an easy way to have all your cdev resources appear in the order you want. The cdevs appear in alphabetical order following the General cdev when you select the Control Panel. To put them in the order you want, simply rename the cdev files; what I do is place

numbers in front of the original names.

In order to rename the cdev files, you have to duplicate them, rename the copy, then throw away the original.

P Pudaite

Mac menu bar interference

One problem with Word 3.0x on the Macintosh is that Microsoft's choice of long menu titles, such as Document and Window, plays havoc with the length of the menu bar especially when desk accessories add their own menus to the menu bar.

You can't change Word's menu titles to something less verbose with a utility such as ResEdit, because Microsoft

VIATEL ADAPTORS ONLY \$79.80 SAVE \$160 FROM COMMODORE.

Commodore is offering Viatel adaptors for only \$79.80, a saving of \$160. So if you own a Commodore 64C, 128 or 128D, transform your computer into a 2-way system, through which you can receive and act on information.

Send in this coupon now. Offer closes June 30, or until stocks last.

didn't use menu resources. So, use a file editor such as Fedit. Perform an ASCII Search for the capitalised word 'Document'. This reveals the program area where the names of menu titles are stored. Each title is preceded by the length of the title. For example, change the 8 in front of 'Document' to 3, then issue the command WRITE SECTOR. That's it. Using this technique, you can completely rename or shorten Word's menu titles. If you rename titles, make sure your new titles are no longer than Word's old ones.

N Ransom

Total check

I use Microsoft Word on the Macintosh. Generally I need to spell check an entire document, but I don't like going to the beginning of a document before running the spelling checker. If I don't start at the beginning of the document, then I get a 'Continue Check from Beginning' dialog from Word.

In order to check the entire document without moving the cursor to the beginning, select the entire document by moving the cursor to the left margin, where the cursor changes to an arrow,

then click the mouse while pressing the Command key. Now run the spelling checker. The entire document will be checked in one pass.

D Meza

Usable 'auto date'

While setting up a template for memos in Mac Word, I stumbled across the fact that the 'auto date' from the headers or footers can be copied and pasted anywhere in a document. It continues to change automatically each time you start a new document. An 'auto date' can be distinguished from text containing the date by using the SHOW PARAGRAPH command (COMMAND-Y), which displays a dotted outline around 'auto dates'. This also works for the time and page numbers. You can also paste 'auto date' into the glossary and add it to your Work menu.

L McArthy

ImageWriter, part I

Here's a way to obtain the fastest and best print quality from your ImageWriter II. You can access the ImageWriter II's built-in proportional fonts from within

MacWrite or Microsoft Word. Certain fonts when printed with the 'draft' quality access the printer's internal proportional fonts.

These internal proportional fonts are: Boston II 10 and 12 point, Toronto 12 point, Chicago 12 point, Venice 14 point, London 18 point, Athens 18 point, and San Francisco 18 point. Other fonts, such as Geneva, use a monospaced font in draft mode that produces awkward spacing.

D Harten

ImageWriter, part II

Here's a foolproof way to deal with the Imagewriter II's frustrating tendency to crunch up paper as its paper-advance teeth lose track of the perforated edge. First, place the printer on a table top with the back of the printer about 20cms from the edge. Then put a phonebook (about 8cms thick) between the edge of the table and the printer. Next, thread the paper from below the table, over the phonebook, into the printer, and out again. Whenever you print, start on the second sheet of paper. Attach a heavy paper clip to the paper and let it gently pull the paper over the phonebook be-

SCIENTIFIC SOFTWARE

Software designed by scientists for scientists.

CHEMWORD \$490

A chemical word processor with a large range of chemical structure templates ready to use, or design your own. A stand alone package or use inside Microsoft WORD 3. or 4.

SOLVER-Q \$180

From the university of Wisconsin, a numerical and symbolic equation solver with an in-built editor. Solve over 1000 arbitrary simultaneous nonlinear algebraic equations. Symbolically simplify arbitrary equations. Optimisation. Symbolic differentiation. Multiple nonlinear regression. Complex equations. 1-2-3 compatible files.

SCI-GRAF \$195

A scientific graphics program with a wide variety of plots for a large range of printers and screens. Menu driven. Linear or log scales.

GRANT TRACKER \$235

An accounting package designed for those research and other workers still in receipt of a grant. Keeps track all actual and proposed expenditures. Stretch your money.

LOGICHEM \$110

The Logichem Organic Interface Program is an Expert System which will deduce the products of the reaction between an organic chemical and another, or a common reagent. Works on functional group and/or multiple bond matching. Database supplied referenced to "Organic Chemistry" by Morrison and Boyd; modifiable by user. A teaching and learning, rather than a research aid.

hind the table. Leave at least another 20cms between the table and the wall for gathering the printed output. This costs you extra space and paper, but the printer will finally stop crunching up your paper.

E Keller

PageMaker

When using PageMaker on my Mac, I often need to nudge an object just a small distance. Dragging with the mouse rarely provides precise control. Easy Access, and INIT that comes with the new System, is useful for this situation. Just press COMMAND-SHIFT-CLEAR to turn on the Mouse Keys. Press the 0 key to lock the mouse button down, then use the numeric keypad to move the pointer (press 8 to move up, 6 to move right, etc). To move the pointer one pixel on the screen, tap the key once. For longer movements, hold down the key. Pressing the decimal point unlocks the mouse button, and pressing the Clear key turns off the Mouse Keys.

K Fong

Macintosh Excel, part I

In Page Preview in Excel I discovered that while in the Blow Up mode, the arrow pointer turns into the hand scrolling tool when the Option key is pressed. An Option allows you to scroll to any part of the document without going back to the Full Page mode, moving the magnifying glass, and then clicking on the other part of the document.

C Smith

Excel, part II

Using Excel's FIND command (the one under the Formula pull-down menu, not the FIND under the Data pull-down menu) with nothing in the 'Find What:' field finds unoccupied cells. With this command you are restricted to the actual size of the worksheet (ie, the worksheet area you have highlighted). If you try to execute FIND from the keyboard with COMMAND-H, Excel bypasses the Find window and selects the next occurrence of the search string, (ie, the next blank cell). If you want to open the Find window from the keyboard, just type COMMAND-J.

D Weber

Excel, part III

You can create a cell with a blank numeric format. In other words, you can enter a value into the cell and it

won't show. I use this and the LOOKUP function in an entry area of the spreadsheet for my company billing template. The blank format cell is the entry area for a code number that corresponds to the Town, State, and Post Code in the Lookup table. The code number itself is never displayed. Here's the technique:

- 1) Select the cell to format.
- 2) Choose NUMBER from the Format menu.
- 3) Hit the Backspace key, then the Space bar.
- 4) Press the Enter key to return to your worksheet.

D Smith

Excel, part IV

In Excel, when you want to copy a formula from one cell to another but still keep the reference absolute, you normally add a dollar sign (\$) before the reference, and then Copy and Paste.

There is another way. By copying the formula from the formula bar instead of copying the cell itself and pasting it as usual you end up with the same cells being referenced in the new location. The procedure goes like this:

- 1) Select the cell that you want to copy.
- 2) Select Formula from the formula bar.
- 3) Press COMMAND-C or choose COPY from the Edit menu.
- 4) Click on X in the formula bar.
- 5) Select the cell that you want to paste and press COMMAND-V.

You now have exactly the same formula in the new cell.

M Topete

HyperCard

If you want to expand the cursors of HyperCard, make the ones you need with ResEdit, and call them from HyperCard by indicating the ID Number. The browse tool and all other HyperCard icons and cursors are in the FONT resource of HyperCard, shown as a strange '12 ID 31756'. You may not be able to open a resource with the ID number set so high. You can change the ID number, temporarily, to a lower number using GET INFO from the menu bar. Now you can open the resource, make your changes, then reset the ID number to the previous value. Be sure to save the changes.

M Lafortune

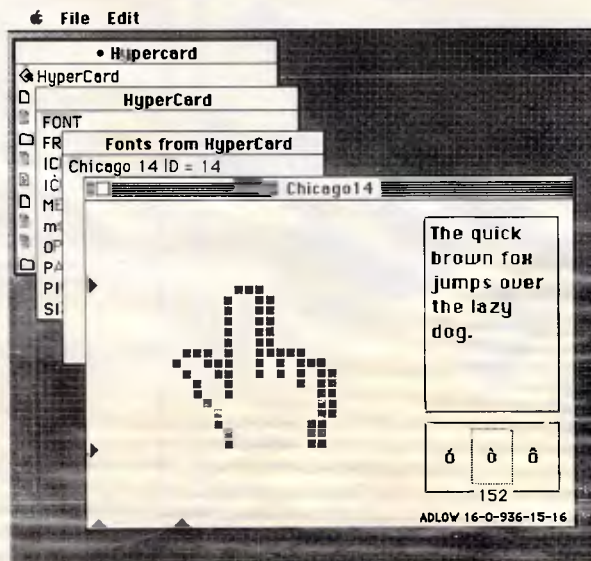

- If you need HyperCard to select a tool or pattern from the Tool menu or the Patterns menu but you're not sure what it's called, follow this procedure:

- 1) TEAR-OFF the menu that has the item in question.
- 2) Select the tool or pattern that you plan to use.
- 3) Type 'get the tool' or 'get the pattern' into the Message Box and press Return.
- 4) Type 'it' into the Message Box and press Return.

The Message Box should contain the exact name (or, for patterns, a number) that HyperCard needs to identify that item.

A Moore-Smith

- Showing the time in a stack is nice, but it becomes a pain in the mouse if

HyperCard cursor and other icons are kept in the HyperCard FONT resource. Use ResEdit if you want to make alternate icons. To access these icons, HyperCard will need to know their ID numbers

the stack is used for keyboard input. At the end of each minute, HyperCard updates the time. If you happen to be typing when the clock strikes, HyperCard abandons the text field to update the Time field, and your keyboard turns into a pumpkin. One way to ensure uninterrupted keying is to have HyperCard only refresh the time when you are not keying. The following lines in your stack script will do just that (assuming a field named 'Time' is in the background):

```
on openField
  set lockText of field "Time" to false
end openField

on mouseLeave
  set lockText of field "Time" to true
end mouseLeave

on idle
  if lockText of field "Time" =
    true then put the time into
      field "Time"
  end if
```

B Swagerty

Writing TSRs

I have a problem with a TSR program

I'm writing as an experiment. I'm using MASM 5.0, DOS 3.3, and an IBM PC XT. My program hooks interrupt 09h (keyboard interrupt) and checks for a hot-key (Ctrl-~) to pop up. If the key is detected, a message appears on the screen. My problem is writing the message. I tried to use DOS interrupt 21h, function 09h, but it hangs every time. I got the program to work using BIOS calls, however. I can get interrupt 21h calls to work in the initialisation part of my program, but once I'm inside my interrupt handler, it goes off into outer space when it tries to return.

J Ratti

The basic problem lies not in your code but in the fact that MS-DOS was designed to be a single-tasking, single-user operating system. The majority of the MS-DOS kernel is not 're-entrant'. That's to say, it cannot be called by an interrupt handler if it was already executing at the time the interrupt occurred.

For example, imagine that an application has called MS-DOS to perform a file function, the file operation is in progress, an interrupt occurs, and a program that is invoked by the interrupt also calls DOS to request a file function. Instant disaster! DOS's stacks and inter-

nal variables get bashed, the context of the original file operation function call is lost, and a crash is almost certain to follow.

There are a variety of ways to get around these re-entrancy problems, most of which involve use of semidocumented or undocumented MS-DOS function calls and internal flags. Most or all of the necessary techniques have been presented in the body of the source code for the various 'pop-up utilities' that have appeared in APC's productivity section over the past six months. The new MS-DOS Encyclopaedia (Microsoft Press, 1987) contains a detailed chapter on writing TSRs, complete with a working example. Also, you might find Performance Programming Under MS-DOS, by Michael Young (Sybex Books, 1987, ISBN 0-89588-420-8) which contains extensive information on writing TSRs — RD.

Less is more

I recently ran across a program that would not run properly on an IBM PC in which more than 512k was installed. Although this sounds strange, I've run

Fig 2 MEM512.ASM assembly language code to create MEM512.COM program, which will trick DOS into thinking you have only 512k RAM. You may substitute other Runtis by changing the number following MEMSIZE EQU and fixing the other text references

across other commercial and public-domain programs that have this problem.

One possible cause is the program's use of a signed compare and jump where an unsigned compare and jump in checking memory size is appropriate. You can address up to 512k with 19 address bits and need a 20th bit to go any higher. A signed comparison will interpret this as a negative value and report insufficient memory.

To fix this, I wrote the MEM512.COM program created by the MEM512.ASM assembly language code in Fig 2 or the Basic MEM512.BAS program in Fig 3. It looks at the memory size variable set by the diagnostic code during boot-up. If this variable says your system has more than 512k installed, the program sets it to indicate that only 512k is available. It then performs a special reboot (INT 19)

that bypasses system diagnostics to avoid the memory-sizing routine. The system will load normally except that it will think it has only 512k RAM.

If you run MEM512.COM on a system with 512k or less, it will display a message indicating the amount of RAM and then quit without rebooting.

The equate MEMSIZE is currently assigned the value 512. If you want to reduce the amount of memory even further, change the number there.

B Herbert

It's true that even some commercial software (like the Version 3.3 of WordStar's installation program) had problems with more than 512k, but these days, with so many programs needing 600k just to say hello, you probably won't need this utility much. Still, if you're developing software, you have to make sure it runs on small-

memory systems, and this program makes it easy to simulate them all.

If you do create several versions, change both the value after MEMSIZE EQU and all the text references to 512K — PS.

Disappearing act

I've read comments in several magazines complaining about new software installation programs that alter existing AUTOEXEC.BAT or CONFIG.SYS files. One way to avoid these unwanted modifications is to change the attributes of the two files to Hidden. DOS will still access both files without complaint during boot-up, but it will not allow any programs to modify or delete them.

B Stephenson

Changing the file attributes to 'hidden' or 'read-only' will prevent programs from overwriting them. The SCRIPT file shown in Fig 4 will create four files called HIDE.COM, UNHIDE.COM, RO.COM, and UNRO.COM. Type this SCRIPT file using a pure-ASCII word processor. Be sure to leave the blank line above RCX and to press the Enter key at the end of each line, especially the last one. Then make sure DEBUG.COM, Version 2.0 or later, is handy and type

DEBUG < SCRIPT

To hide CONFIG.SYS, just type

HIDE CONFIG.SYS

To unhide it later, type

UNHIDE CONFIG.SYS

To make AUTOEXEC.BAT read-only, type the command

RO AUTOEXEC.BAT

and to bring it back to normal, type

UNRO AUTOEXEC.BAT

These four files use function 43h of INT 21 to first check the existing attribute byte and change only the bits that need modification. ORing the existing value with 1 makes it read-only; ORing it with 2 makes the file hidden. ANDing it with FE takes away the read-only attribute; ANDing it with FD unhides the file. Other attributes (system or archive) remain as they were.

Unfortunately, you can't use function 43 to change the attribute byte of sub-directories or volume labels, so this won't let you meddle with those. Be

careful when hiding files en masse. If you issued a command such as

FOR %A in (*.*) DO HIDE %A
you'd end up with a whole directory of hidden files. You won't be able to use a

similar command to unhide them, since DOS won't see any files to unhide. You'll have to unhide all your files individually, since wildcards don't work with hidden files. The safest thing to do if you hide lots of files is first to create a

Q

```

Fig 4 SCRIPT file to create HIDE.COM, UNHIDE.COM, RO.COM, and UNRO.COM. Type it in using a pure-ASCII word processor. Make sure you leave a blank line above RCX and that you press Enter at the end of every line, especially the last one

master file listing all the filenames, and then to put this master file in some other directory or on some other disk. If you're on drive C: you could use a command like

```
DIR > B:C-HIDDEN.LST
```

Making all your root directory files hidden may look interesting, but it can confuse other people who try to work with your system. Making them read-only will prevent other programs from changing (or deleting) them, but you'll still see them in normal DIR searches.

Some awful installation programs change things as they proceed. They may rename a driver file on the original disk or delete files once they've copied

them to a hard disk. If the installation process is interrupted, or if it's so dumb that it doesn't know when something's gone wrong, you may have trouble reinstalling things later.

A safer way is simply to create a \ROOTBACK subdirectory one level down from the root and copy all your important root directory files into it. When something changes the files in the root directory, or if you somehow erase them, you can log into the root directory and type

COPY ROOTBACK

If you do try this, make sure that if you ever change your AUTOEXEC.BAT or CONFIG.SYS files, you copy the new versions into \ROOTBACK — PS.

Another approach

Another clever way to prevent having software packages replace or otherwise modify AUTOEXEC.BAT files was submitted by William Dixon:

The AUTOEXEC.BAT file on my disk contains just one real line (after an initial ECHO OFF):

```
ECHO OFF
SETPATH STARTUP
```

All it does is execute another batch file called SETPATH.BAT:

```
SET NORMPATH=C:\DOS;C:\UTIL;C:\
PATH %NORMPATH%
%1
```

SETPATH.BAT sets the path, then executes the STARTUP.BAT file, since its %1 replaceable parameter refers to the word STARTUP in the last line of the AUTOEXEC.BAT file.

The STARTUP.BAT file contains all the commands I normally would have placed in an AUTOEXEC.BAT file:

```
PROMPT $P$G
PRINT /D:PRN /Q:32
CARDFILE C:\UTIL\CARDFILE.TXT
DOSKEY
CTYPE /MA
SPEEDUP
```

There are several advantages to this technique:

(1) The AUTOEXEC.BAT file is easy to re-create if it is destroyed or inadvertently modified.

(2) The PATH command is in its own separate batch file, making it easy to change if directories are added or removed.

(3) The SETPATH.BAT file makes it easy to restore the default path if it has been changed.

(4) By creating a batch file like AD-DPATH.BAT,

```
PATH %NORMPATH%; %1
```

it's easy to add a new directory to the path temporarily, and then restore it later with SETPATH.BAT.

(5) If all memory-resident programs are removed by utilities such as MARK/RELEASE or INSTALL/REMOVE, running STARTUP.BAT restores those programs as they were at power-on time.

W Dixon

Warm booting from Basic

The BASICA program listing (Fig 5) will cause a warm boot when added to a program and then run. A cold boot is even easier to do, although it will cause a longer delay due to the PC's memory check. To convert this routine to perform a cold boot, remove lines 30 through 130, change the ARRAY(7) in line 20 to ARRAY(2), and then change the FOR counter in line 200 to FOR I = 0 TO 4.

Dr T Burnakis

To convert this routine for use with QuickBASIC or Turbo Basic you will have to use CALL ABSOLUTE, which is equivalent to BASICA's CALL command. CALL ABSOLUTE is built into Turbo Basic directly; however, you must first use

```
DEF SEG = VARSEG (ARRAY (0))
```

before the POKE and CALL statements, to make the array's segment the current default.

In QuickBASIC 2.0, ABSOLUTE is an external routine contained in the file USERLIB.OBJ, though in later versions it is in its own file named ABSOLUTE.OBJ. Regardless of which version of QuickBASIC you're using, this object module must be linked to your program after it has been compiled — EW.

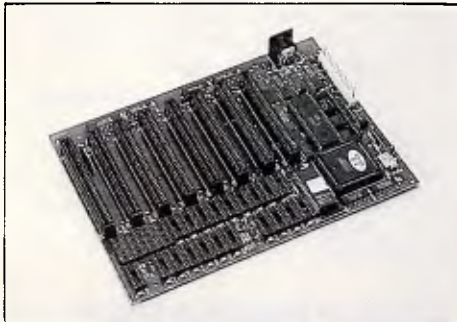

Compressing with bitmaps

When the elements of a large array are going to be used as flags to indicate yes/no or on/off status, the individual bits of each byte can be used to reduce memory overhead.

On IBM PC-class machines, a byte is 8 bits, which means a character array can track eight times as many elements (or be eight times smaller, depending on

your needs). Each element of a list can be represented by a single bit, with every 8 bits stored in a single array element. When an element is to be set (turned ON), the position of the character containing the bit is found and the bit set to 1. Resetting the bit (turning it OFF) requires the bit to be set back to 0.

BITTEST.C is a small program that demonstrates the use of these bit manipulation routines.

S Manipoopathy

Bitmaps and bit manipulations are not new. But C makes bit manipulation so easy that it's a sin not to take advantage of it, as Mr Manipoopathy's program, shown in Fig 6, so aptly demonstrates. I can think of a lot of times bitmaps would have gone a long way in improving the memory requirements of one of my programs: tracking previously asked questions in a trivia game program or a list of record numbers from a database selection, for example. In fact, a small model program (limited to 65,535 bytes of data space) can easily track over 250,000 elements of a list using a 32k bitmap.

Whenever you use bitmaps, make

```
10 ' Machine language warm reboot procedure
20 DEFINT A-Z: P=0: I=0: J=0: DIM ARRAY(7)
30 DATA &HB8 :REM This is the hex code
40 DATA &H40 :REM for the warm reboot.
50 DATA &H00 :REM It first goes to the
60 DATA &H8E :REM memory address 0040
70 DATA &HD8 :REM and places 1234 (hex)
80 DATA &HC7 :REM into memory. Then it
90 DATA &H06 :REM branches to FFFF:0000,
100 DATA &H72 :REM the address where the
110 DATA &H00 :REM CPU begins to execute
120 DATA &H34 :REM instructions after a
130 DATA &H12 :REM power on. From here
140 DATA &HEA :REM the PC's BIOS jumps
150 DATA &H00 :REM to the start of its
160 DATA &H00 :REM diagnostic routines.
170 DATA &HFF
180 DATA &HFF
190 REM

210 SUBRT=VARPTR(ARRAY(0)): CALL SUBRT
```

Fig 5 Running this subroutine in a Basic program will force the PC to do a warm boot

sure that the maximum number of elements being tracked does not exceed a value eight times the number of bytes in the bitmap; otherwise, you're sure to get

'unpredictable results' — a program crash. I did this, and the 'bug' disappeared once I realised my error and increased the size of the bitmap.

BITTEST.C uses a 1k bitmap to track over 8000 elements. You can adjust this if you wish, but remember that data space in a small model program is limited, and most compilers require the 'Huge' memory model to be used to create an array larger than 64k. You can also declare a 'Huge' pointer and allocate over 64k from the far heap.

The Bitmap initialisation routine (a macro call to `memset`) should always be called before commencing calls to bitmap routines. This ensures that the bitmap is properly initialised to all zeros.

The `setbit()` function turns on a specific bit in the bitmap. To do this, it first calculates which byte in the bitmap contains the bit to be set, by dividing the bit number by 8 (the divide operator ignores any remainder). For example, bit number 7 (starting with 0) would be in byte 0, and bit number 24 would be found in byte 3 — the quotients of (7/8) and (24/8), respectively.

Next, `setbit()` finds the individual bit in the selected byte via the C modulus operator, which returns the remainder of a division operation. Calculating the remainder of 7 divided by 8 (7 % 8 in a C modulus) returns 7, or the seventh bit of byte 0; bit number 24 would be the zeroth bit of byte 3 (24 % 8). Fortunately, `setbit()` performs this automatically for us.

Finally, `setbit()` must turn that particular bit ON. It does this by taking the value of 1 (or 00000001 in binary) and shifting it left by the bit number. Bit 7, for in-

```
/* bittest.c
 * tests bit-map routines
 */

#include<stdio.h>
#include<mem.h>
#include"PCMag.h" /* standard definitions */

#define BITMAP_SIZE 1024
#define NUM_BITS 8
#define MAXVAL (BITMAP_SIZE*NUM_BITS)
#define Bmap_init(bitmap,size) memset(bitmap,0,size)

unsigned char bitmap[BITMAP_SIZE]; /* can track 8000 elements */

main()
{
    int n,i;
    char linebuffer[100];

    Bmap_init(bitmap,BITMAP_SIZE); /* initialize the bitmap to 0 */

    while(TRUE)
    {
        printf("\nEnter a number to put in the list & RETURN (^Z to go on):\n");
        if(!gets(linebuffer))
            break;
        i = atoi(linebuffer);
        if(i < 0 || i > MAXVAL)
            printf("\nOnly numbers from 0 to %d are valid in this demo",MAXVAL);
        else
            setbit(bitmap,i);
    }

    while(TRUE)
    {
        printf("\nEnter a number to EXCLUDE from the list & RETURN (^Z to go on):\n");
        if(!gets(linebuffer))
            break;
        i = atoi(linebuffer);
        if(i < 0 || i > MAXVAL)
            continue;
    }
}
```

PUT TIGER POWER INTO YOUR COMPUTER

Lead year's 40-350W range of switching power supplies —

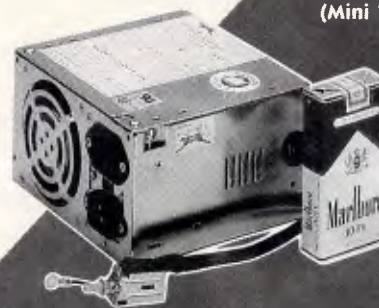

For IBM compatible PC/XT, PC/AT, Baby AT, and 386-based PS/2-microcomputer

Lead Year Enterprise Co., Ltd. was founded in 1973 to design and manufacture state-of-the-art switching power supplies for a variety of high-tech computer applications. CAE design services allow both design-in and design-out projects. Original inhouse creations include super compact Mini Tiger for microcomputers; these SPSs are available in select wattages between 100-180W and All SPSs are designed to meet UL, CSA, and TUV safety standards as well as FCC and FTZ noise standards.

Lead Year's main SPSs products are:

- PS/2 models
- 386 tower system models
- 286/386-type PC/AT models
- Mini Tiger' super compacts
- Cubic Baby AT models
- PC/XT models
- OEMS are welcome

Ends

stance, results in 10000000 (1 shifted left seven times). Note that the bits are referred to here on a right-to-left basis, so that bit 7 is the seventh bit from the right side of each byte (beginning with 0).

This creates a mask that is used to turn on the appropriate bit via the bit-wise OR operation. An OR operation always returns TRUE (or 1) if at least one of the two operands is TRUE. So, ORing a bit set to 1 (10000000) with a bit set to 0 (00000000) will always result in a 1 (10000000).

The table 'Turning On Specific Bits' shows the first 32 bits of a bitmap before and after bits 7 and 24 have been set.

To reset a bit in the bitmap (ie, to turn it OFF), the same steps are taken in resetbit() with the exception of the OR operation. Instead, a logical AND is used (which returns FALSE unless both operands are TRUE). To ensure that the appropriate bit is turned OFF without affecting the other bits in a byte, a mask must be created that contains a 0 in the appropriate bit. In other words, to turn off bit 7, we must create a mask the opposite of 10000000 — that is, one that looks like: 01111111.

ANDing a byte with this mask will turn bit 7 OFF without affecting the remaining bits. Other bits that are ON will stay

ON, while bits that are OFF will remain OFF. That's the nature of the AND operation and this particular mask.

To create this second mask, the complement of the first mask is used. Designated by the tilde (~), the complement operator reverses all of the values of the bits in a byte. So while ORing a bit with a 1 will force it ON, ANDing the bit with the complement of 1 (or 0) will force it OFF.

The remaining function, isbitset(), returns TRUE or FALSE depending on whether the appropriate bit is ON or OFF. It accomplishes this by ANDing the bit with the original mask and returning the result of the AND operation. This will only return TRUE if the bit has been set.

To test these functions, BITTEST.C prompts you for a series of numbers to include in the list, which are added to the list via setbit(). Then it prompts for numbers to be excluded from the list and resets them via resetbit(). Finally, it uses isbitset() to print the list of included numbers on the screen.

Bit manipulation routines can also be written as macros, too, depending on how much 'in-line' code you want scattered all over your program.

Either way, the functions in BITTEST.C can reduce your list tracking data overhead considerably — RS.

IBM and Apple Mac owners FREE OFFER

Let Attaché Software introduce you to computerised accounting the easy way, absolutely FREE and without obligation.

Attaché, the biggest name in micro accounting systems, has prepared a demonstration disk that runs just like the real thing.

Just load it into your IBM compatible or Apple Mac and examine Attaché in the convenience of your office or home.

Attaché offers: accounts receivable, order entry, invoicing, sales analysis, inventory, accounts payable, department/ project costing, general ledger and payroll.

This is your risk free opportunity to prove to yourself how Attaché can streamline your accounting. At prices starting under \$1,000, you can't go wrong.

Turbo Pascal clarifying inline listings

Using hex constants in `INLINE` code destroys the readability of the code and invites errors if you type in a wrong number.

The solution is to use named constants to represent the instruction mnemonics. As an example:

```
INLINE ($8B/$86/stack_var);
```

loads the value of the parameter 'stack_var' into the AX register. If you declare a `CONST MOV_AX_BPdisp = $868B`, you can write this instead:

```
INLINE (MOV_AX_BPdisp /
        stack_var);
```

(By my convention, a single underscore separates the portions of the instruction, and a double underscore indicates in-direction.)

Note that integer words in the 8088/8086 are stored in byte-reversed order, so \$1234 would appear as \$3412. Also, in Version 2 of the compiler, references to constants generate a two-byte value even if the constant defines only one byte.

That is the reason for the value of the `ES` override instruction being \$2690. The \$90 is a NOP (no operation), to pad the constant out to 2 bytes. Under Version 3 you may simply use \$26.

The listing in Fig 7 demonstrates this technique as used to create a set of routines for incrementing and decrementing a pointer, and adding to and subtracting bytes from a pointer.

D Selesky

When I write `INLINE` code, I often have to get out an 8088 reference manual or leave Turbo Pascal and use `DEBUG`. In `DEBUG` I assemble the instructions I need and note the actual bytes that represent them.

Either way makes writing `INLINE` tedious. Mr Selesky's method makes so much sense, it's a wonder we haven't seen it before. Just create an `$Include` file of constants for common opcodes and then refer to them by name in your `ONLINE` code. Remem-

Fig 7 Demonstrating the use of named constants for INLINE opcodes

ber, untyped constants don't take up any code space. They're strictly for your benefit — NR.

Drive sniffer

The DRIVES.SCR script in Fig 8 will create DRIVES.COM, which scans the entire alphabet to report all valid drives on an IBM PC, logical and physical, while ignoring the gaps. Type it in using a pure-ASCII word processor (omit the semicolons and the comments following them).

Be sure to leave the blank line above RCX, and press the Enter key at the end of each line, especially the last one (with the Q). Then make sure DEBUG.COM is handy and enter the command

```
DEBUG < DRIVES.SCR
```

Instead of using the save/change/check drive technique, DRIVES, like COMMAND.COM, employs the esoteric DOS

interrupt 21 function call 29h to check valid drives.

G Monroe

SUBST is a terrific keystroke saver, reducing complex pathnames down to manageable single letters. And if you have trouble remembering which of your programs are on which of your many drives, SUBST lets you use mnemonic labels (such as W: for the drive that holds WordStar). DRIVES.COM will report all the drives you've currently nicknamed. But so will just typing SUBST. However, DRIVES.COM will report both logical and physical ones, something DOS can't do — PS.

Fooling COMMAND.COM

If you want to use batch files and/or programs that have filenames identical to internal DOS commands, just prefix them with drive letters. DOS will recognise them as files and search the PATH for them.

To: All Lotus/Symphony Users

BOEING CALC

The 3-D Power Spreadsheet

If you are:

- * Running out of MEMORY
- * Wanting more power than LOTUS or SYMPHONY spreadsheets
- * Wanting to create larger consolidation models
- * Not willing to leave the familiar LOTUS environment

Then BOEING CALC is for you! BOEING CALC was created specifically to meet the limitations of conventional spreadsheets.

FEATURES:

- * Disk based (no memory problems — spreadsheet up to 32 Mb!!)
- * 3-Dimensional (rows, cols, and pages)
- * Existing LOTUS and SYMPHONY spreadsheets run without conversion
- * Room to move (16,000 rows x 16,000 cols. x 16,000 pages)

AVAILABLE IN LAN VERSION

- * Up to 32 simultaneous users
- * Full cell range security

BOEING 3-D GRAPHICS

- * Fully compatible with BOEING CALC, LOTUS and SYMPHONY
- * Superb graphs and facilities

Evaluation systems for BOEING CALC and BOEING GRAPH are available.

WINDSOR, VICTORIA, 3181

Telephone: (03) 51-1572

For example, to execute a customised DIR.COM program, type C:DIR. This saves you from having to patch COM-MAND.COM.

Dr Z Barak

You shouldn't really have to patch COM-MAND.COM, since you can almost always come up with a name that's slightly different from the actual internal DOS command. However, if you really need to duplicate the names of commands and filenames, this technique will work (in Versions 3.x). You may also prefix such a command with a pathname. And if you want to execute a file like this in the current directory, you can stick a .\ in front of it. So, typing the command

.\DIR

would run the DIR.COM or DIR.EXE or DIR.BAT program stored in the current directory — PS.

USEing blank filenames

Software written in the dBASE language offers no built-in password security system, and if you have databases with sensitive information you may not want everyone to be able to edit, append, delete, or zap the data.

A simple solution is to insert CHR(255), which appears to be a CHR(32) space, as part of a filename or program. Then, for example, if you change the filename PAY_RATE.DBF to PAY RATE.DBF, the ordinary user will attempt to enter a space between the Y and the R and won't gain access to the file.

To create the CHR(255) character, hold down the Alt key and enter 255 on the numeric keypad. This method of file security can be useful with other types of files, too.

C Cohen

While this technique won't stop a sophisticated snooper for long, it certainly has the advantage of simplicity, and it requires no programming whatever.

Many subtle variations can be played on this theme. For example, if you add the CHR(255) at the end of the filename, your snooper can take a DIR of files, see what appears to be a perfectly normal filename, and be completely unable to USE it. Or you could name your file with a single CHR(255); when a DIR is taken, all that appears for this file is a blank filename, and the unauthorised user may not realise that it even exists.

Still another variation is to create a subdirectory named CHR(255). Inside this subdirectory, you can keep any

Exhibitions

May

31 Comsoft This exhibition/seminar to be held at the Adelaide Hilton Hotel from May 31 to June 2 will be demonstrating and explaining software, software and more software! *Enquiries, Ray Goldie, tel: (08) 363 1757*

June

6 The Annual Exhibition of Engineering Software An exhibition for users by users incorporating structural and civil engineering software. To be held at Clunies Ross House, 191 Royal Pde, Parkville. *Enquiries, ACADS, tel: (03) 51 9153*

7-10 2nd Australian International Tech Exhibition This exhibition attracts widespread interest, generating business opportunities for 114 participating companies. To be held at Darling Harbour. *Enquiries, tel: (02) 436 3266*

7 Technology and Computer Productivity Awards Come and applaud the achievers of significant productivity gains through the use of advanced technology from all levels of government at Canberra's Hyatt Hotel. *Enquiries, Colin Archer, tel: (02) 552 1166*

Conferences/Meetings

May

16-18 Microelectronic Advances Conference to feature microelectronic advances will be held at the University of Sydney. *Enquiries, tel: (02) 327 4822*

16 Turbo Pascal SIG Meeting To be held at 7.30pm, St Mark's Anglican Church, cnr Canterbury and Bourke Rds, Camberwell.

17 NSW SAS Users Group Meeting This half day meeting will begin at 9.00am and conclude at 1.00pm. To be held at the NRMA head office, 151 Clarence St, Sydney. *Enquiries, tel: (02) 260 8787*

17 PostScript SIG Meeting To be held at 6.30pm at Peak, Marwick and Mitchell, 18th floor, 500 Bourke St. Melbourne.

18 Tech SIG Meeting To be held at 7.30pm at the Physics Department of Melbourne University. *Enquiries, Patrick Kearney, tel: (03) 344 5465*

19-21 5th World Computer Security Conference IFIP is expected to draw around 400 international experts for this conference which will be held on the Gold Coast. Organised by the International Federation for Information Processing. *Enquiries, Bill Caelli, tel: (075) 56 0911*

23-26 Management Renaissance in a Brave New World This conference explores the challenges facing managers up to the turn of the century and beyond and underlines the key roles managers must play to initiate this renaissance. *Enquiries, AIM, tel: (07) 832 0151*

24 Public Domain SIG Meeting To be held at 7.30pm, St Mark's Anglican Church, cnr Canterbury and Bourke Rds, Camberwell. *Enquiries, Leon Cohen, tel: (03) 520 6414*

24 Low Cost CAD Shootout Seminar All CAD-crazy users should attend this seminar from 1.30pm to 7.30pm at the Metropole Hotel, 287-305 Military Rd, Cremorne. *Enquiries, ACADS, tel: (02) 929 8097*

25-26 Australian Status Users Group Australian Status Users Group 1988 Conference and Annual General Meeting will be held at the South Park Motor Inn, Adelaide. *Enquiries, Lorraine Gerdes, tel: (08) 274 7531*

25-26 A/E/C Applications '88 Computer applications in architecture, engineering and construction. Four half-day seminars to be held at the Metropole Hotel, 287-305 Military Rd, Cremorne. *Enquiries, ACADS, tel: (02) 929 8097*

25 A/E/C Applications '88 Applications for mapping, surveying and mining will be held in the morning and those for civil, road and water will be in the afternoon. So wander down to the Metropole Hotel, Cremorne. *Enquiries, ACADS, tel: (02) 929 8097*

25 Geelong Regional SIG Meeting to be held 7.30pm at Geelong Amateur Radio Club room, 4 Storrer St, Geelong. *Enquiries, Ron Vahland, tel: (052) 75 6813*

26 A/E/C Applications '88 This time we have structural in the morning and architectural and plant layout in the afternoon. To be held at the Metropole Hotel, Cremorne. *Enquiries, ACADS, tel: (02) 929 8097*

27 Retired Persons SIG Meeting To be held at 10.00am, at St John's Church, Virginia St, Mt Waverley. *Enquiries, Keith Bower, tel: (03) 277 1666*

31 Australian Paradox Users Group The formation of this latest SIG should be of great interest to many readers out there. Why not go along and see for yourself. Meetings to be held the last Tuesday of every month. *Enquiries, Gordon Castle, tel: (03) 563 1037*

31 Paradox Users Group Remember, this newly formed users group will hold its meetings on the last Tuesday of every month at Bird Cameron, 316 Queen St, Melbourne. *Enquiries, tel (03) 563 1037*

June

5-9 The Enterprise Networking Event '88 The Enterprise Networking Event has called for papers. The conference is planned for the Baltimore (Maryland) Convention Centre. *Enquiries, tel: (313) 271 1500*

COMMUNICATIONS BREAKTHROUGH

Microtex 666 is the foremost publisher on Telecom Australia's national videotex service - Viatel

Take a giant step into the 21st century and join Microtex 666 today. Microtex is the largest and fastest growing information provider on Viatel and caters extensively for microcomputer users.

Feast from the ever changing software library - available for you to load straight into your micro and save on disk or cassette. There are over a THOUSAND programs from Australian, American and British software houses, all discounted and some absolutely free.

There's 24 hour Bulletin Board services, one of the worlds largest multi-player games, hardware and software shopping including a Trading Part and daily computer news. All this and much more is part of the vast service linking thousands of Microtex and Viatel users across Australia, 24 hours per day, 7 days a week.

Mike Mudge introduces readers to the elementary concepts of cryptology in this month's 'not-so-secret' Numbers column.

The need for secret communication in diplomacy and military affairs is readily appreciated. Now that electronic mail, electronic banking and other computer-based business transactions are part of everyday life, the need for security of information is clear to us all. The purpose of this article is to indicate certain aspects of number theory which are the foundations of elementary ciphers (or codes), to display examples of their use, and to invite readers to submit a working coder and decoder package with a specimen message.

It must be emphasised that the types of cipher discussed are elementary and bear little relation to those used in an ultimate security environment; however, they can form part of a challenge among, for example, computer club members: 'How do you go about cracking (even an elementary) code?' This aspect will not be considered here, but may form the subject of a future column, depending upon the response to this article.

Character ciphers

Stage 1 Translate the letters of the alphabet into their numerical equivalents 0-25.

Stage 2 Transform the numerical equivalent, m , of each letter in the message into another number, c , using an 'affine transformation' of the type: $c = am + b \pmod{26}$ where a and b are integers having no common factor. Note that since modulo 26 means retain only the remainder after division by 26, it follows that c lies between 0 and 25 inclusive.

Stage 3 Return each c to its equivalent letter using the reverse process to that described at stage 1 and group into convenient, ordered sets, say, of five to yield the code.

The particular affine transformation in which $a = 1$ is called a 'shift transformation' and clearly corresponds to replacing each letter of the message by that found by shifting b places through the alphabet.

For example, under the affine transformation $c = 7m + 10 \pmod{26}$, the message 'PLEASE SEND MONEY' becomes the code 'LJMKGMGXFG EXMW'!

Block ciphers

Stage 1 Group the letters of the message into convenient, ordered sets — say, for example, pairs. For example: 'PLEASE SEND MONEY' becomes 'PL EA SE SE ND MO NE Y'.

Stage 2 Transform the numerical equivalent, m_1m_2 , of each pair in the message into another number pair, c_1c_2 , using a pair of affine transformations of the type: $c_1 = a_1m_1 + b_1m_2 \pmod{26}$.

Stage 3 Return each c_1c_2 , to its equivalent letter pair using the inverse translation process. For example: 'STOP PAYMENT' block ciphered in triples using the affine transformations:

$$c_1 = 11m_1 + 2m_2 + 19m_3 \pmod{26}$$

$$c_2 = 5m_1 + 23m_2 + 25m_3 \pmod{26}$$

$$c_3 = 20m_1 + 7m_2 + m_3 \pmod{26}$$

becomes 'ITN NEP ACW ULA'.

Exponentiation ciphers

Invented in 1978 by S Pohlig and M Hellman (see IEEE Transactions on Information Theory (vol 24, 1978, pp106-110) this begins by translating the letters of the message into numerical equivalents, using A,B,C, . . . Y,Z becomes 00,01,02 . . . 24, 25. The resulting numbers are then grouped into blocks of '2s' digits; where 2s is the largest positive even integer, such that all blocks of numerical equivalents corresponding to s letters (viewed as a single integer with 2s decimal digits) is less than an odd prime p . Associated with p is the *enciphering key* k , a positive integer which has no common factors with $p - 1$.

For each message block M , which is an integer with 2s digits, form a code block C using the transformation:

$$C = M^k \pmod{p}, 0 < C < p.$$

For example, if $p = 2633$ and $k = 29$, then to encipher:

'THIS IS AN EXAMPLE OF AN EXPONENTIATION CIPHER', first convert to two-digit numerical equivalents, then group in blocks of size four: 1907 0818 0818 . . . 0704 1723. The final 23 being an X added to complete a block of four.

Now use $C = M^{29} \pmod{2633}$ to obtain the code:

2199 1745 1745 . . . 1841 1459.

Readers are invited to send an encoder, a decoder and a specimen message to Mike Mudge, c/- APC, 124 Castlereagh St, Sydney 2000 by June 17, 1988.

It would be appreciated if such submissions contained a brief description of the enciphering theory and any peculiarities of the programming, in a form suitable for publication in APC. These submissions will be judged using subjective criteria, and a prize will be awarded to the 'best contribution' received by the closing date.

Please note that submissions can be returned only if a suitable stamped addressed envelope is provided.

Factorisation of Fermat Numbers, Review, October 1987

The factorisation of fermat numbers, $F_m = 2^{2^m} + 1$, proved to be a very difficult exercise even with the assistance of Theorem 3.

The table shown here is due to Professor Wilfrid Keller of the University of Hamburg and summarises the state of the art at 1980. This table accompanied the then new results that $1985 \times 2^{933} + 1$ is a factor of F_{931} , $19 \times 2^{6838} + 1$ is a factor of F_{6835} , while $19 \times 2^{9450} + 1$ is a factor of F_{9448} .

Subsequently GB Gostin and PB McLaughlin (Math Comp, vol 18, No 158, April 1982 pp645-649) published a new prime factor for each of F_{29} , F_{36} , F_{99} , F_{147} , F_{150} and F_{201} . It is certain that further results exist in the literature and readers are invited to comment on any which they can locate.

Using the flexibility of the 'sub-

Values of m	Character of F_m

NUMBERS

jective criteria' this month's prizewinner is Andrew Slodkiewicz of 25 Taylors Road, St Albans, 3021.

Andrew uses string handling routines in Turbo Pascal to manipulate numbers up to 256 digits. Unfortunately his hardware is undefined; however, the calculation of Euler Number E₁₅₂ having 238 digits (for definitions see APC, February 1987) took in excess of

four hours to calculate. 'String division is performed using multiple subtractions, then shifting the numerator to the left, and so on. It takes about three seconds per unit in each decimal place'.

Readers may like to write to Andrew with advice or obtain further details of his work in this area.

END

Mike Mudge welcomes correspondence on any subject within the areas of number theory and other computational mathematics. Particularly welcome are suggestions, either general or specific, for future Numbers articles; all letters will be answered in due course.

LAZING AROUND

Brainteasers courtesy of JJ Clessa

Quickie

No answers, no prizes for this one.

What number must be added to both the numerator and the denominator (top and bottom) of the fraction 2/5 to give a result of 3/4?

Prize puzzle

The sequence of numbers 1,1,2,3,5,8,13,21,34 is known as a 'Fibonacci' series, since each number in the series after the first two is formed by adding the preceding two. Thus,

$$2=1+1$$

$$3=1+2$$

$$5=2+3$$

$$8=3+5$$

and so on.

In our example we started with 1 and 1, but we could have started with any two numbers.

If we wanted to include the value of one million — that is, 1,000,000 — in our series, what are the two smallest positive (non-zero) numbers that we could have used to start off the series? We define the smallest two numbers as the two numbers whose sum is the least. (Note that the second number cannot be less than the first, although it may be equal.)

Answers on postcards only please, to

arrive not later than 31 May 1988.

Send you entry to: Lazing Around May, APC, 124 Castlereagh St, Sydney 2000.

February prize puzzle

This was much harder than usual. Only 15 entries were received, of which six were incorrect.

The winning card, drawn at random, came from Mr A Fieldus of Surrey Hills.

The winning solution is:

$$96 \times 8745231 = 839542176$$

Congratulations Mr Fieldus, your prize is on its way. To all the others — keep trying.

END

IF YOU HAVE A COMPUTER, THIS IS FOR YOU !!!

SPECIAL!! Computer Maintenance Membership offers from **PCS** COMPUTER ENGINEERING

BENEFITS for Member:

- ★ An absolute saving on Labour for Servicing.
- ★ No limit to the number of servicings during currency of membership.
- ★ Fast turnaround.
- ★ Expert advice to the latest computer technology.
- ★ If your computer has not been in for any service, your membership would be valid for another year.

MEMBERSHIP APPLICATION FORM

This membership will cover 12 months labour maintenance on your standard personal computer, (excluding spare-parts).

Membership fee for each computer type are as follows:
(please tick box to indicate).

- ☐ IBM PC/AT (80286) and compatible.....\$170
☐ IBM PC/XT and compatible.....\$120
☐ APPLE II Series and compatible.....\$80
(IIGS, IIC, IIE, IIF and Apple II)

I would like to apply for the membership offer.

My Name: _____

Address: _____

Phone: _____

My Computer is Model Serial No.

Made Purchased from Year purchased 19.....

please note:

*one membership covers only one computer.

Any enquiry, please do not hesitate to ring us.

(please tick box to indicate method of payment)

I enclosed ☐ cheque/money order \$.....
or debit my ☐ Bankcard ☐ Visa.

Card Holder's name: _____

Address: _____

Credit Card No.: _____

Signature _____

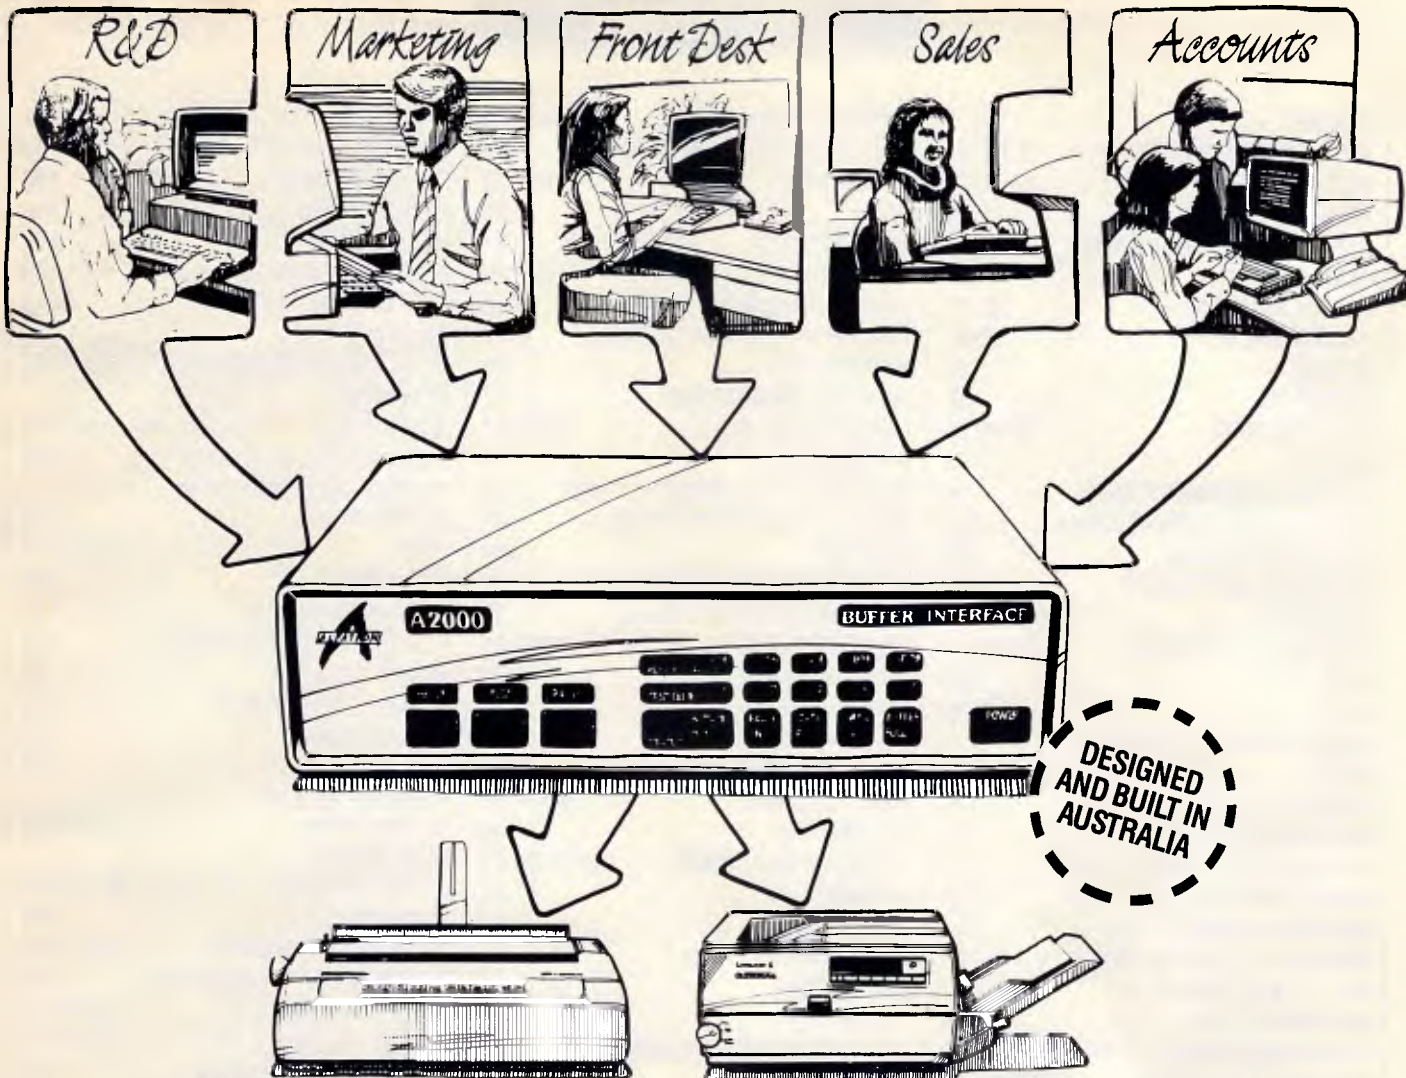

Expiry date _____

Conditions:

- * Your membership will be valid one week after the correct amount of money is paid.
- * Application is based on yearly rate. If member cancels during the year, money is not refundable.
- * Any cartage involved in delivery or pick-up member's computer(s) are member's own expenses.
- * If your membership application(s) was not accepted, we will notify you.

"Share and share alike."

Flexible interconnections at an affordable price

The Alfatron A2000 Communications Interface lets you maximise three very important resources – your people, your computers and your printers. And, it costs far less than you might think. In fact, the A2000 is significantly lower priced than equivalent imported products. Much more than a switching device, the A2000 also functions as a data buffer so there is no waiting for devices to become free – your people can keep working without frustrating delays.

Easy to set up and use

Working with the A2000 could hardly be simpler. On power-up or reset, the A2000 connects all devices to one port such as a printer. To connect to another device, the user has only to key in another port. That's all there is to it. Several personal computers or work stations can conveniently share printers or work stations can conveniently share printers as well as transfer data or files amongst themselves. Menu set up is available as an option.

All systems go

Up to eight independent channels can be operated simultaneously, using the basic

memory size of 256K which is expandable to 1M. What's more, a dynamic memory allocation algorithm ensures that each channel only uses as much memory as it needs, leaving the remaining memory free for other channels.

You're in charge

The A2000 is very flexible. User controlled configurations range from simple serial/serial, serial/parallel or parallel/parallel conversion to an intelligent networking interface. The two parallel ports can be either input, output, Centronics or Data Products and the six serial ports are RS-232. If desired, units can be cascaded to increase the number of input channels to suit the application.

One of a series

The A2000 is one of the Australian designed and built Alfatron A-series of interfaces which between them cover virtually all data interface requirements.

The A500 is a low cost serial/serial converter whilst the A1000 is a serial/parallel buffered converter featuring speeds up to 19.2K Baud and a choice of buffer size up to 32K. The A3000 Flexible Buffered Converter is available in 2 or 4-channel versions and is microprocessor based. It provides intelligent multiple line interfacing and storage up to 256K Bytes.

For information on any of the Alfatron A-series converters, please ask for the comprehensive literature. Dealer enquiries welcome.

Think You Need an AT?

Make Your IBM PC Faster Than an AT in Just 5 Minutes!

Accelerator Cards: Speed and Value

Speed figures are consolidated results from 10 tests of CPU performance (See Accelerator Boards Special Report, December 1, 1986.)

- ☐ Microspeed Fast 88
- ☐ Microsoft Mach 10
- ☐ Univision Dream Board
- ☐ Orchid Turbo EGA
- ☐ ST&D Standard 286
- ☐ Classic Speedpack
- ☐ Orchid PC-Turbo 286e
- ☒ Breakthru 286-12

REPRINTED FROM INFOWORLD, APRIL 27, 1987

We are excited about our three speedup products. You probably know about our Lightning disk access speedup software that was awarded PC Magazine's Best of 1986 award (see box). After the smashing success of Lightning, in late '86, we

But, no speedup board cuts disk access time in half

LIGHTNING

software can - FREE w/Breakthru

"Lightning is almost mandatory...." - Steve Manes, PC Magazine Best of 86 review

Loads with the DOS - always ready as a background program to accelerate disk access. You do nothing - everything is automatic. Programs that frequently access the disk (hard or floppy) are made instantly up to 2 to 4 times faster. Uses a principle greatly enhanced from mainframe technology called caching. Fully exploits Above Board memory.

LIGHTNING is the standard against which all our competition measures itself because we achieve universal compatibility with other software. Data is never lost. Order **LIGHTNING** separately or get it free with your Breakthru 286 board.

guaranteed the Breakthru 286 board to be literally the most advanced, fastest, most feature-rich board available. The runaway success it has enjoyed truly proved that assertion. Now we go ourselves one better with the Breakthru 286-12. This new board has the clock speed cranked up from 8 to 12 MHz for speeds up to 10.2 times faster than an IBM PC. It is 50% faster than an 8MHz IBM AT, and up to a whopping 1,000% faster than a regular PC.

HERE'S WHY THESE TWO BOARDS ARE SO SPECIAL.

First, they install so easily. A half-slot card means you don't even have to give up a full slot. What's more, unlike competing

products it works in the Compaq Portable and most clones. Easy diagrams show how you just place the card in an open slot, remove the original processor and connect a single cable. There is no software required. From that moment you are running faster than an AT.

Second, they are advanced. The BREAKTHRU 286 replaces the CPU of the PC or XT with an 80286 microprocessor that is faster than the one found in the AT. Has a 80287 math coprocessor slot for numeric intensive applications. A 16K cache memory provides zero-wait-access to the most recently used code and data. Speed switching software allows you to drop back to a lower speed on the fly for timing sensitive applications.

Third, you have full compatibility. All existing system RAM, hardware, and peripheral cards can be used without software modification. Our boards operate with LAN and mainframe communication products and conform to the Expanded Memory Specification (EMS). Software compatibility is virtually universal.

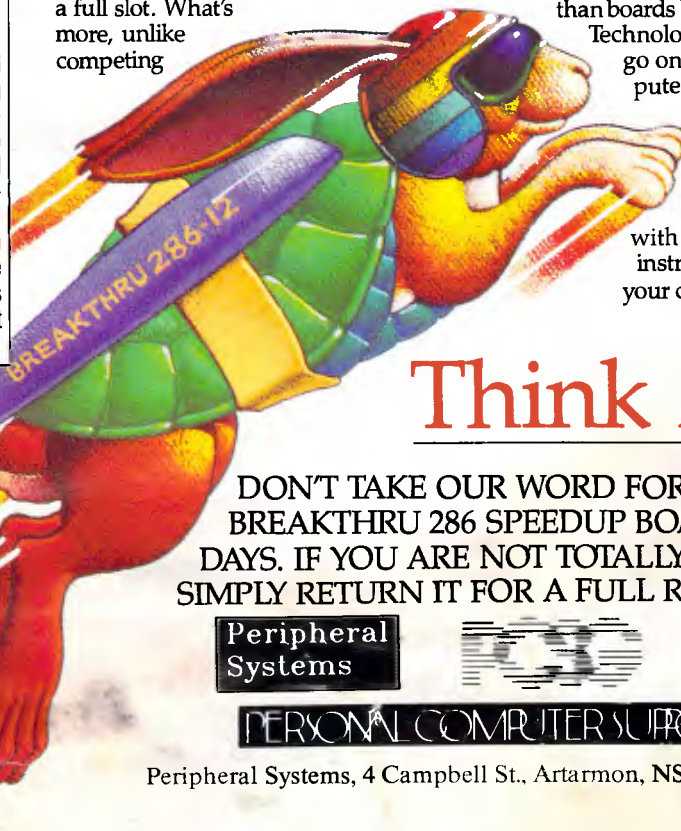

Faster and smarter than an AT - PCSG guarantees it.

Fourth, these are the best. There are several other boards on the speedup market. We at PCSG have compared them all, but there simply is no comparison. Many cards offer only a marginal speedup in spite of their claims and others are just poorly engineered.

We are really excited about these products. PCSG makes the unabashed statement that the BREAKTHRU 286 card represents more advanced technology than boards by Orchid, Quadram, P.C.

Technologies, Phoenix...we could go on. Breakthru 286 is undisputedly the turbo board with the biggest bang for the buck. And we include

FREE the acclaimed Lightning software. Call today with your credit card or COD instructions and we will ship your card the very next day.

Think Again.

DON'T TAKE OUR WORD FOR IT. USE EITHER BREAKTHRU 286 SPEEDUP BOARD FOR 60 DAYS. IF YOU ARE NOT TOTALLY SATISFIED SIMPLY RETURN IT FOR A FULL REFUND.

Peripheral Systems

PERSONAL COMPUTER SUPPORT GROUP

Peripheral Systems, 4 Campbell St., Artarmon, NSW 2065 Ph (02) 437 5255

"Now you can get ahead in business by staying right where you are."

With Western Digital Networking

Networking allows you access to other P.C.'s Minis or Mainframes via your own P.C. You can input data or access information without having to leave your desk. Networking helps maximise your resources and the ability to share peripherals will help to reduce your processing costs in the future.

Western Digital is a 1/2 billion dollar U.S. company which offers the complete range of high quality networking

products at the most competitive prices. These products include Novell and Vianet software enabling connectivity with any number of P.C.'s.

Combine Western Digital's superior products with Allaw's unbeatable technical service and product support and you have one of Australia's most formidable Networking operations. Why not give us a call for more information and details of your nearest dealer.
